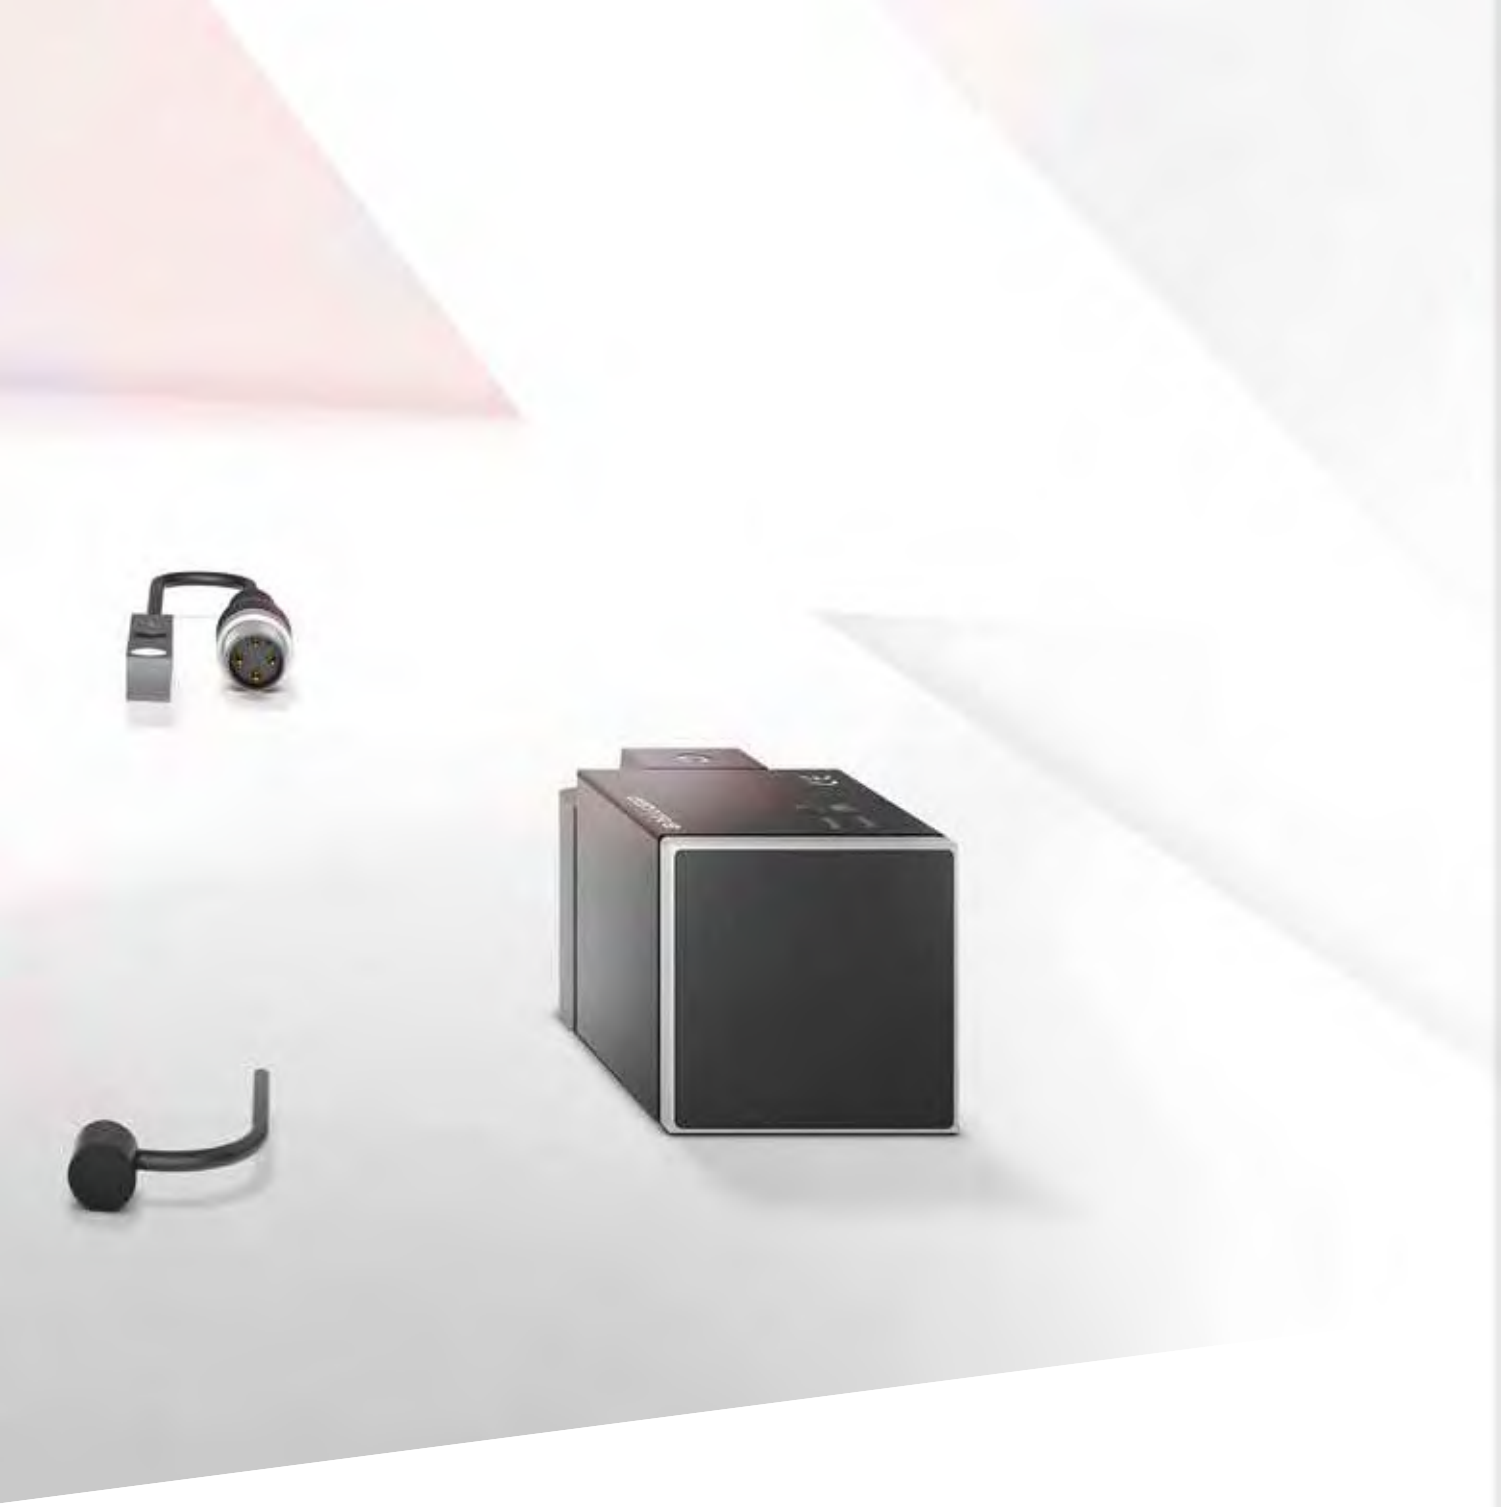
Highest quality and accuracy for automation

INDUCTIVE SENSORS



Automation is almost inconceivable without inductive sensors. Wherever processes are automated, non-contact position detection of metallic objects, freedom from wear, and reliability are in demand.
Whether in machine building, electronics production, in the automobile, foods or plastics industry.

At Balluff you are offered a wide range of inductive sensors in various form factors for virtually any application: from standard sensors to sensors with extended switching distance, hygiene-approved, high-pressure and Ex sensors, Factor 1 or all-metal sensors. They are also available with additional ceramic or PTFE coating, for example to prevent weld splatter from adhering. You will also find all-metal with Factor 1 in our range.

Balluff inductive sensors are used to monitor, control and automate your processes and conditions. With the highest level of quality – even in extreme environments.

The most important benefits

- Suitable for a variety of applications
- Contact-free and therefore wear-free
- Resistant to dirt
- Short-circuit protected
- In configurations from 3 mm Ø to 80 × 80 mm square dimensions

Features

- High resolution and repeatability
- Insensitive to shock, vibration and noise fields
- Absolute analog output signal rising or falling
- Guided sensor element
- 32 kHz sampling rate
- Potential-free
- Non-contact operating principle

	BIW1-A310 BIW1-**A**310-M_ _ _ _-P1-S115	
Analog output U_A / I_A	A (0...+10 V)	
Repeat accuracy	10 µm	
Sampling rate	typ. 32 kHz	
Non-linearity max.	≤ 0.02%	
Operating voltage	18...30 V DC	
Operating temperature	–20...+85 °C	
Degree of protection as per IEC 60529	IP 54	
Approval/Conformity	cULus, CE	
Housing material	Anodized aluminum	
Connection	M12 connector, 8-pin standard	

Calculation example:
BIW1-...-M0100-P1-S115
Nominal length 100
A = 200
B = 110
C = 80

Ordering example:

BIW1-_ 310-M_ _ _ _-P1-S115

Output signal

A	0...+10 V
E	4...20 mA
C	0...20 mA

Object and level detection with patented technology

CAPACITIVE SENSORS

Balluff's capacitive sensors detect fluids, granulates and powders in direct contact or through a non-metallic container wall. As stick-on sensors, they fit flexibly to the housing shape and are easily removable. Moisture, foam and deposits of any kind are compensated for, even through glass and plastic walls up to 10 mm thick. This makes them ideal as level detection sensors for conductive media while guaranteeing high application security.

Our capacitive sensors are available in various form factors, even especially small ones.

The most important benefits

- Contact-free and therefore wear-free
- Bounceless output signal
- Foam and residue compensation

PNP normally open		
PNP normally closed		
PNP normally open/normally closed programmable	**BCS0084** BCS D500004-PPCFAC-EV02	
Dimension	Ø 50 x 10 mm	
Series	D50	
Installation	flush with container outer wall	
Connection	Cable, 2.00 m, PVC	
Switching frequency	2 Hz	
Interface	—	
Sensitivity	media-dependent, adjustable	
Function	Smart Level 15	
Additional features	Electrically conductive media, Foam and residue compensation	
Housing material	POM	
Material sensing surface	POM	
Ambient temperature	-10...60 °C	
Operating voltage Ub	10...35 VDC	
Approval/Conformity	CE, cULus, EAC, WEEE	
IP rating	IP67

Generous detection range for high reliability

PHOTOELECTRIC SENSORS

Photoelectric sensors from Balluff reliably recognize the presence of objects. They check shape, color, distance or thickness equally reliably. This is because they have a significantly greater detection range compared to inductive or capacitive technology.

In the area of photoelectric sensors we offer a huge product variety. Sensors using all light types from red light to infrared to laser technology.
Sensors with the most different ranges, with and without background suppression, as well as many different form factors. For specialty applications, mini-sensors, color sensors, light band and contrast sensors round out our portfolio. With Balluff you achieve not only the highest reliability, but also the greatest flexibility.

The most important benefits

- All light types, all principles
- Different ranges from near to far
- Tailored to the requirements of automation, mounting and handling
- Robust and reliable even under adverse environmental conditions
- Flexibility for planning and installation through well-conceived technical data

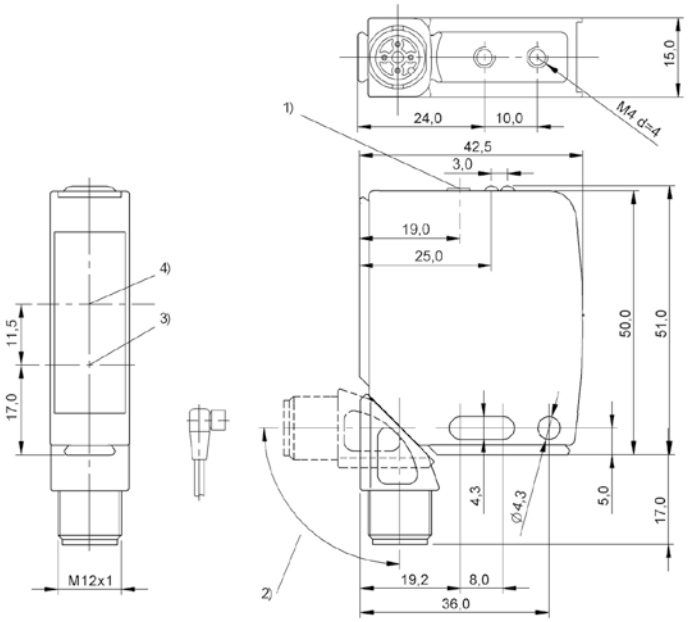
L

	BOS026R BOS 21M-UUI-RP30-S4
Series	21M
Dimension	15 x 51 x 42.5 mm
Interface	IO-Link 1.1 2x PNP/NPN/push-pull NO/NC
Input function	Reset counter
Principle of operation	Photoelectric sensor
Principle of optical operation	Diffuse energetic, diffuse with background suppression, retroreflective, through-beam (emitter), through-beam (receiver), depends on setting
Special optical feature	Multifunction
Beam characteristic	Divergent
Light type	LED, red light
Light spot size	Ø 50 mm at 1 m
Range	adjustable
Connection	Connector, M12x1 connector, 4-pin
Housing material	Zinc, die-cast Aluminum, glass, PC
Material sensing surface	Glass, anti-glare
Operating voltage Ub	10...30 VDC
Approval/Conformity	CE, EAC, cULus



1) Display and control panel, 2) rotatable 270°, 3) Optical axis emitter, 4) Optical axis receiver

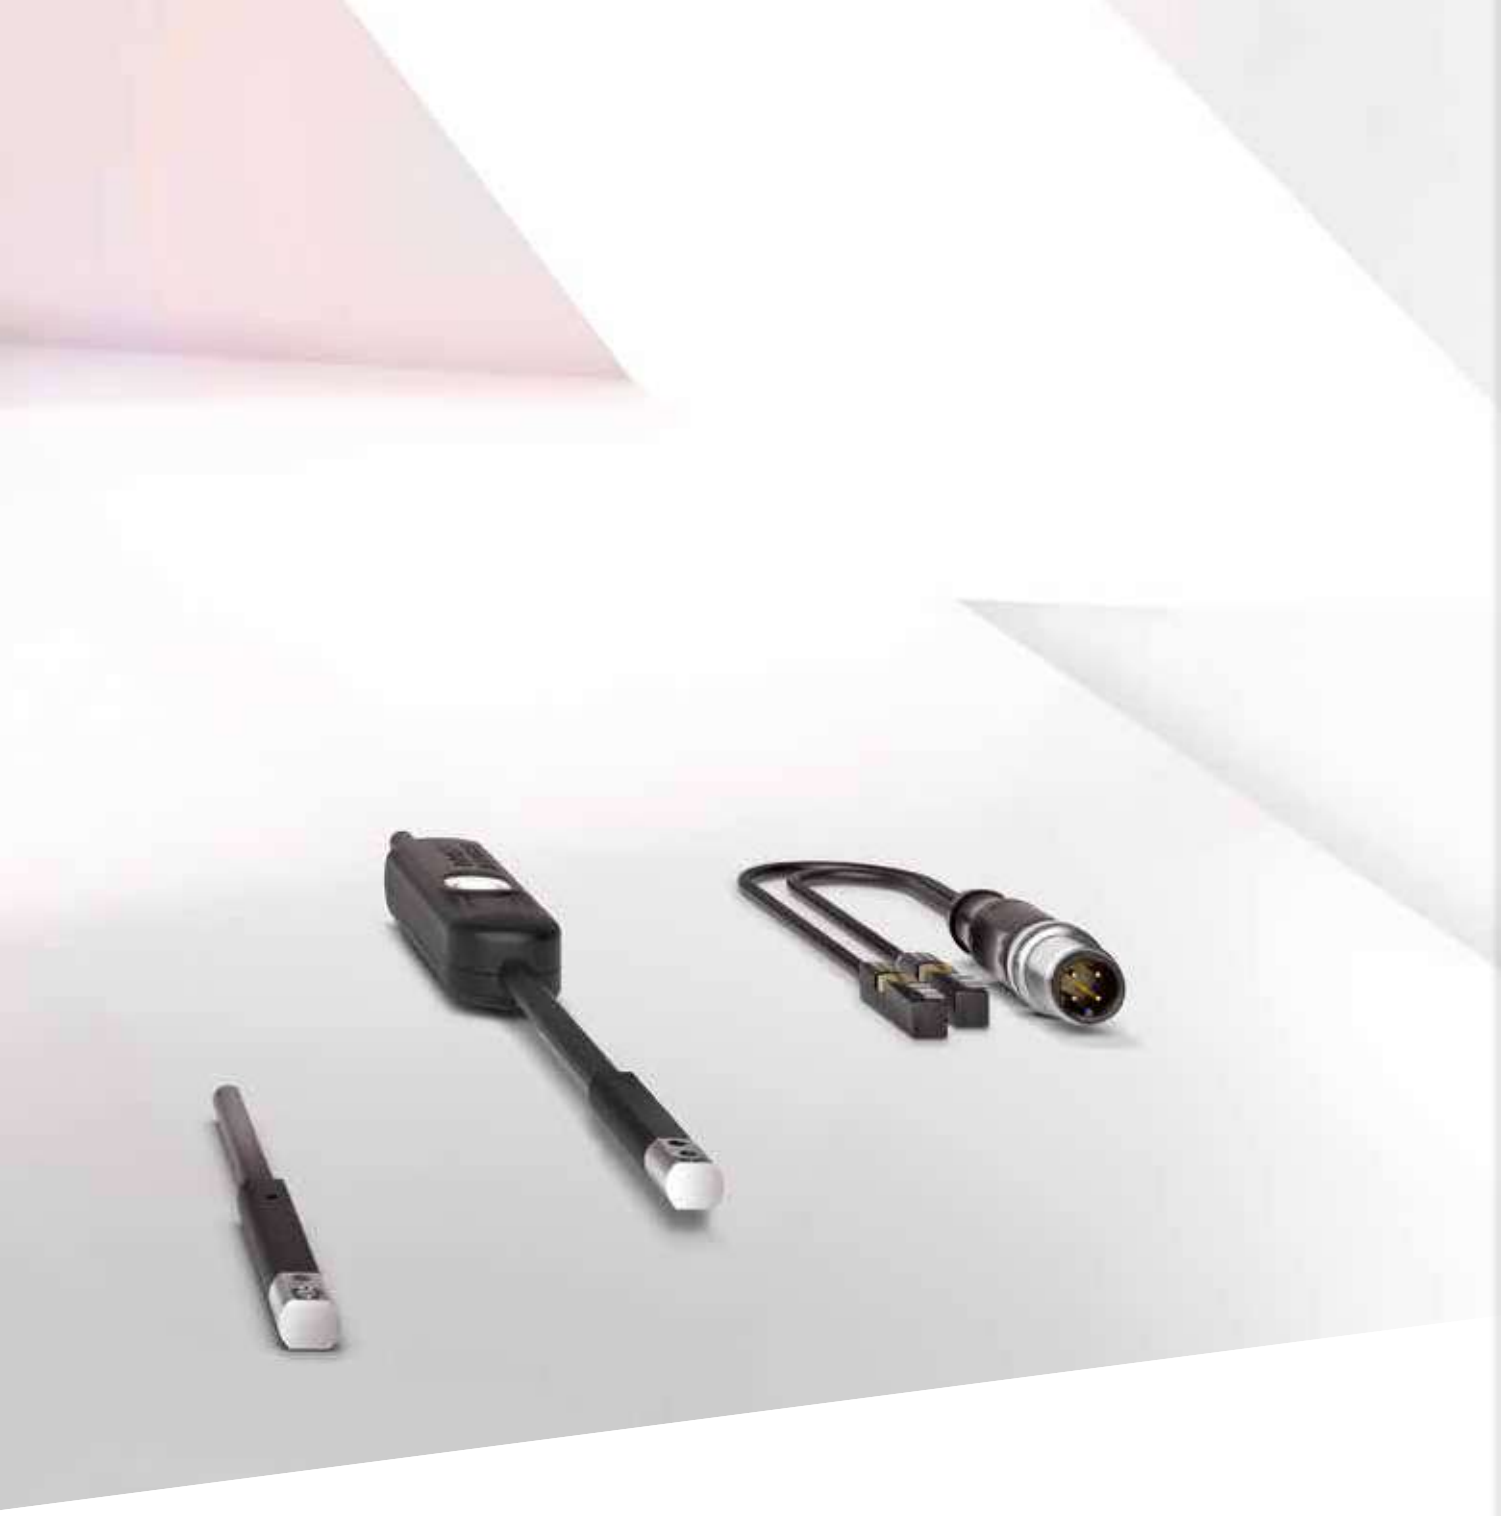
Sure position detection even at high speeds

MAGNETIC FIELD SENSORS



Our magnetic field sensors are used chiefly on cylinders and grippers for monitoring the piston position. The sensor thus recognizes the field of the magnet integrated into the piston through the actuator wall even at high travel speeds.

With their non-contact position detection the magnetic field sensors from Balluff work absolutely reliably and wear-free: no contact burn, no bouncing, just clean switching points.

The most important benefits

- Contact-free and therefore wear-free
- No double switching points
- Reliable even at high travel speeds

	BMP0007 BMP 01-EL1PP21A-0032-00-P00,5-S75	
Measuring range	32 mm	
Dimension	17.5 x 9.6 x 42 mm	
Analog output	Analog, voltage/Analog, current selectable 0…10 V/4…20 mA	
Interface	IO-Link 1.1	
Resolution	≤ 1 µm (IO-Link), 12 bits (analog)	
Repeat accuracy	± 100 µm	
Non-linearity typ.	±250 µm	
Operating voltage Ub	15...30 VDC	
Connection	Cable with connector, M8x1-Male, 4-pin, 0.5 m, PUR	
Housing material	PA 12 Aluminum	
Ambient temperature	-25...85 °C	
IP rating	IP67	
Approval/Conformity	CE, cULus LISTED, IO-Link, WEEE, EAC

BMF000P

Many series and form factors for the greatest flexibility.
The classics for metalworking and automotive

MECHANICAL CAM SWITCHES

The cam switches from Balluff are used on machine tools, presses, in flexible manufacturing centers, robots, assembly and conveying devices, and in machine and equipment construction. They serve as command transmitters for automatic controls, for positioning and for end-of-travel switching.

The design principle of the devices, their variety of possible switching actions, as well as consistent quality inspection, guarantee consistently high quality and reliability.

At Balluff you can choose from nine different series and five plunger types each: Chisel, ball, roller, roller bearing and chisel with wiper plate. A large number of connection varieties is also available.

The most important benefits

- Reliable and rugged, even in harsh environments
- Flawless functionality in the event of vibrations, shock loads, temperature swings, aggressive cooling lubricants and heavy chip accumulation
- Maintenance-free, self-lubricating ram guide with plain bearing bush
- High-quality Viton seals
- Protection class IP67
- Also available with inductive switching points

Single position switch	SERIES F 60 COMPLIANT WITH DIN 43693
Plunger material	Stainless steel, contact surfaces induction-hardened
Housing material	Cast aluminum, corrosion-resistant, anodized finish
Connection type	M16 x 1.5 for cable gland or connector
Ambient temperature	–5...+85 °C
Degree of protection as per IEC 60529	IP67
Approval/Conformity	CE
Productview and installation	Page 714

Ordering example:

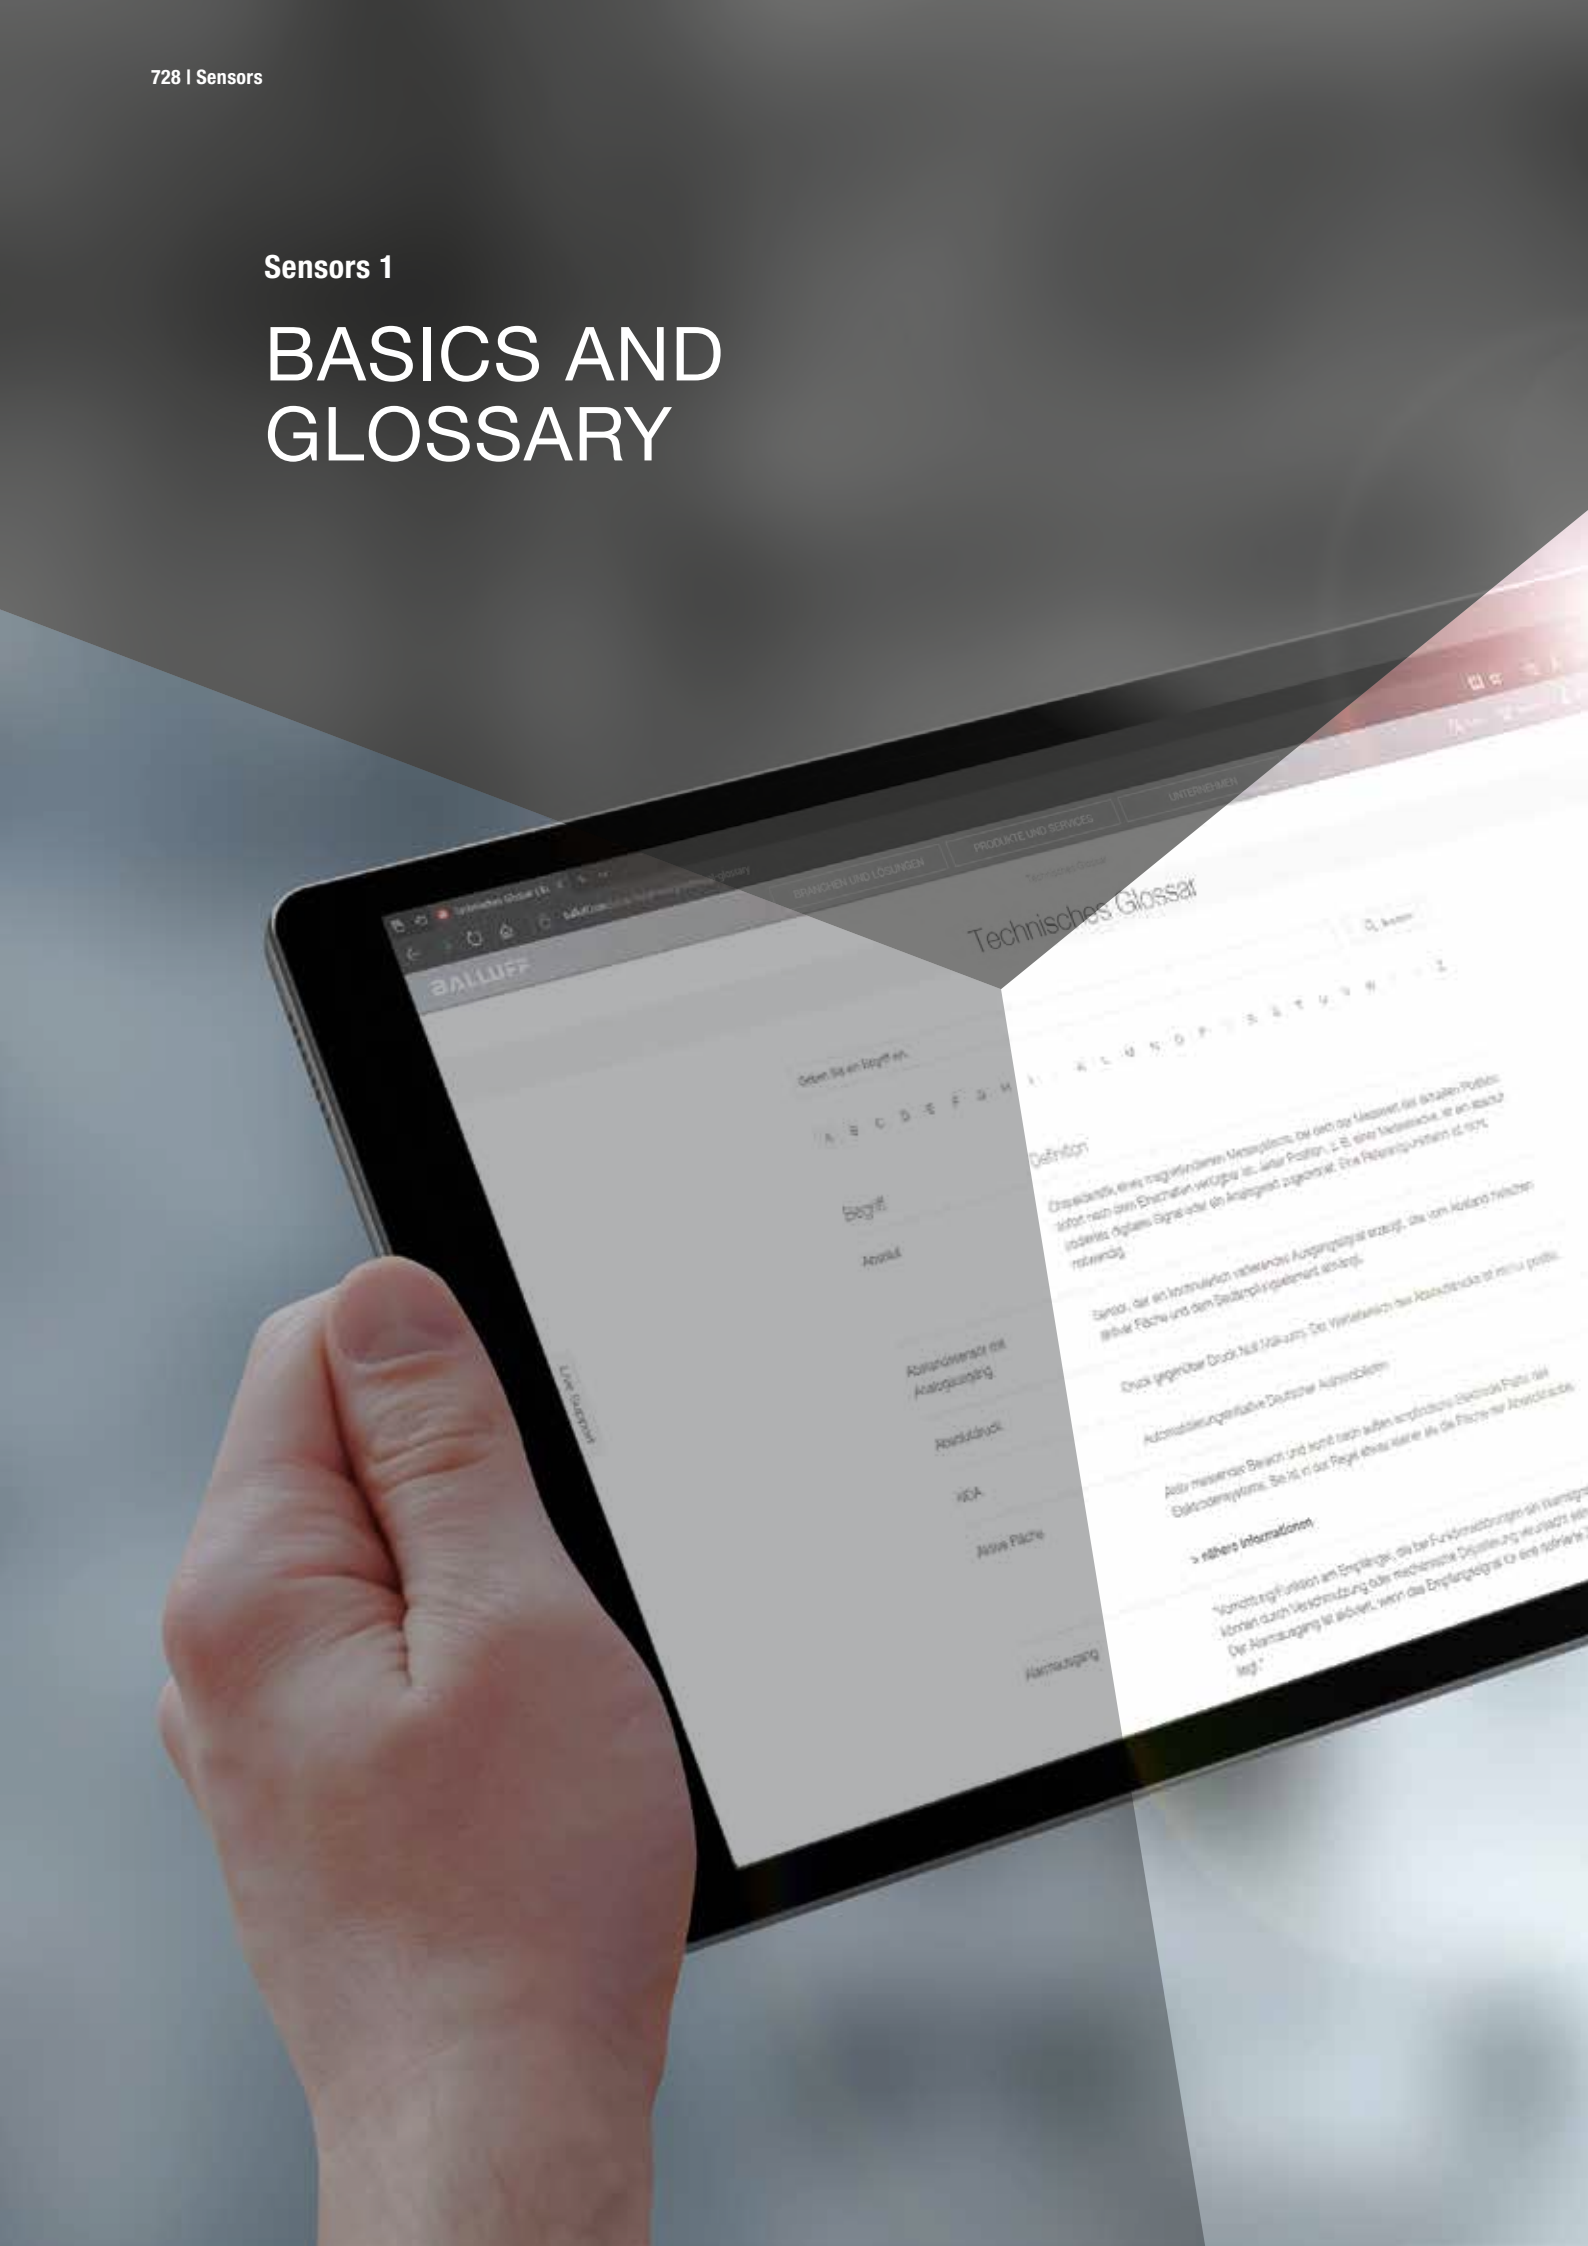
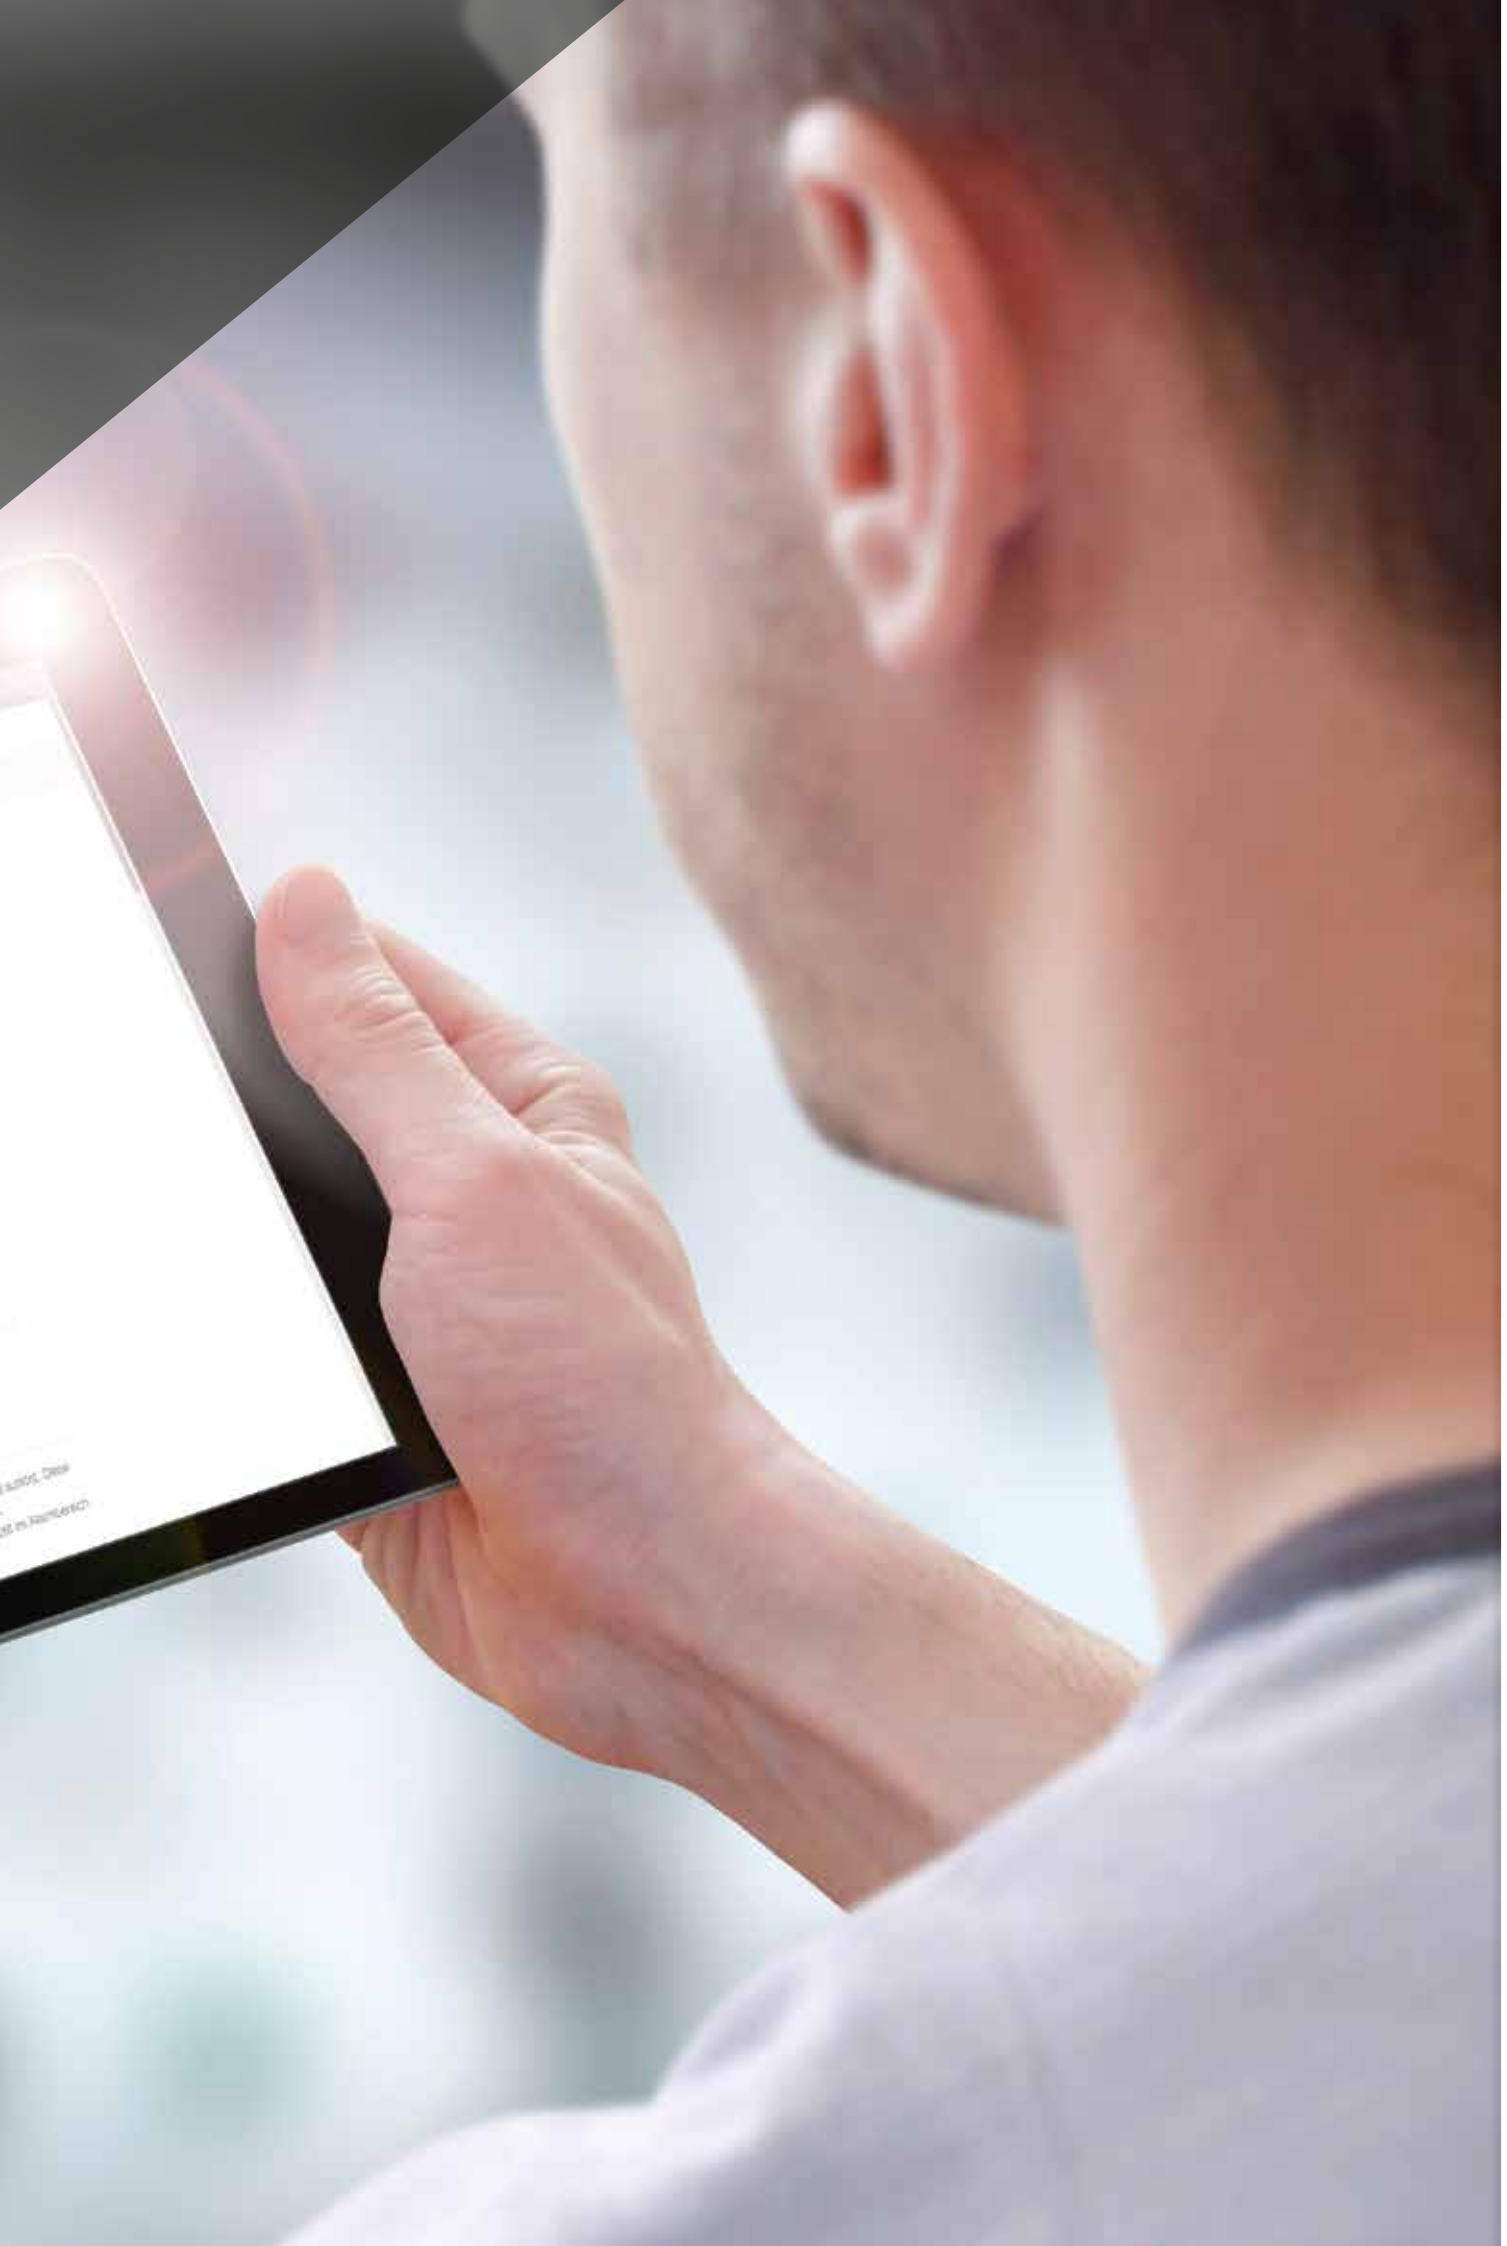
Sensors 1

BASICS AND GLOSSARY



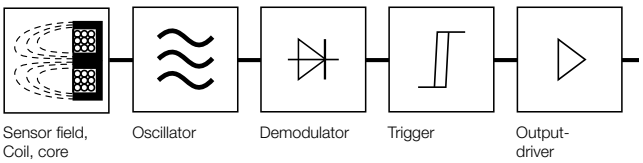


INDUCTIVE SENSORS

Principle

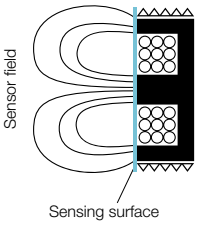
Inductive sensors are based on the interaction of metallic targets with the electromagnetic alternating field of the sensor. Eddy currents are induced in the metallic damping material, which removes energy from the field and reduces the height of the oscillation amplitude. This change is processed in the inductive sensor.

The functional groups of Balluff sensors are:



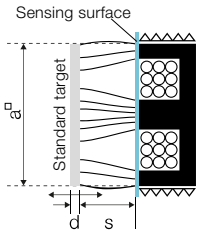
Sensing surface

Actively measuring area and thereby the externally sensitive electrode/plate of the electrode system. It is generally somewhat smaller than the surface of the cover.



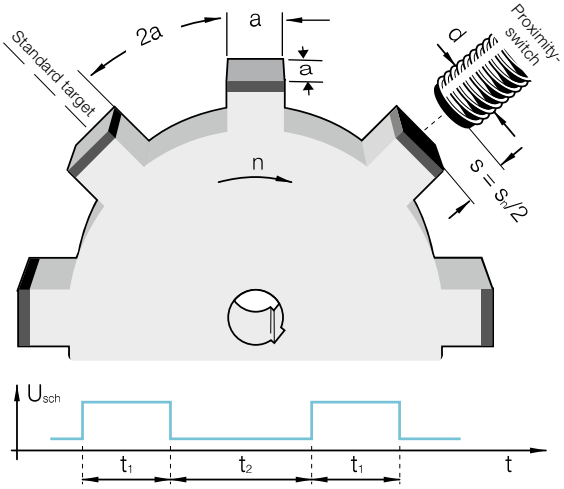
Standard target

A square plate made of Fe 360 (ISO 630), used to define sensing distances per EN 60947-5-2. Thickness is 1 mm; the side length "a" corresponds to the diameter of the inscribed circle of the active surface or 3 s_n, if the value is larger than the named diameter.



Switching frequency

The maximum speed at which the sensor can reliably detect an object under standardized conditions. This corresponds to the maximum number of switching operations (ON/OFF) per second. The value is dependent on the size and speed of the object and its distance from the sensing face.



Correction factor

Reduction in the switching distance for damping materials that are not Fe 360.

Material	Factor
Steel	1.0
Copper	0.25...0.45
Brass	0.35...0.50
Aluminum	0.30...0.45
Stainless steel	0.60...1.00
Nickel	0.65...0.75
Cast iron	0.93...1.05

Factor 1 sensors
Identical switching distance for metals such as steel, stainless steel, aluminum or brass.

Steelface sensors
Effective switching distance = rated switching distance × correction factor

Model	Steel FE 360	Stainless steel	Aluminum	Copper	Brass
M8 Ferrous	1	0.1... 0.7	0	0	0.1
M12 Ferrous	1	0.1... 0.7	0	0	0
M12 Non-Ferrous	0	0	1	1.1	0.9
M18 Ferrous	1	0.1... 0.7	0	0	0
M18 Non-Ferrous	0	0	1	1.1	0.9
M30 Ferrous	1	0.1... 0.7	0	0	0
M30 Non-Ferrous	0	0	1	1.1	0.9

Ferrous
Detection of ferromagnetic steel and iron.

Non-Ferrous
Detection of non-magnetizing metals such as aluminum, copper, brass and many stainless steels.

Delay times

Time delay before availability

Duration between the application of power and the availability of a sensor.

Temperature effects and limits

Ambient temperature T_a

The maximum permissible temperature range at which a sensor may be operated while ensuring reliable functioning of the sensor.

Temperature drift

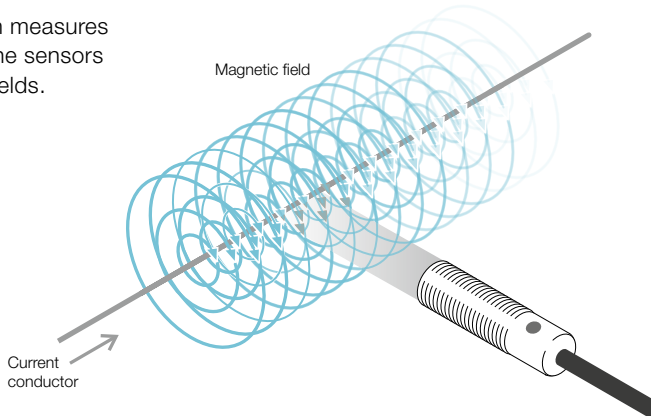
The temperature drift is the deviation of the real switching distance within the temperature range of –25 °C ≤ Ta ≤ +70 °C. In accordance with EN 60947-5-2: $\Delta s_r/s_r \leq 10$ %

Magnetic field immunity

Operating principle

Error-free function depends on the magnitude of the welding current and the distance between the sensor and the current-carrying line.

Construction and circuitry design measures ensure that magnetic field immune sensors are not influenced by magnetic fields.



Operating voltage U_B

Voltage range (V) n which flawless functioning of the sensor is assured.
It includes all voltage tolerances and ripple.

Rated operating voltage

The maximum voltage at which the sensor can be used in normal use.
Indicated by U_e. DC switches: U_e = 24 V DC; AC and AC/DC switches: U_e = 110 V AC.

Voltage drop U_d

The maximum voltage loss of the switching final stage between switching output and $+U_B$ (PNP) or $-U_B$ (NPN) at the maximum specified load current.

Rated isolation voltage

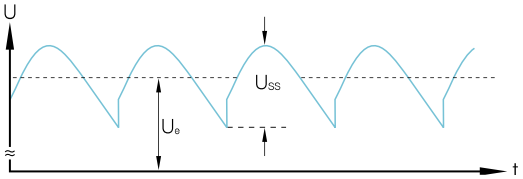
The voltage to which the insulation checks and the air and creepage distances refer.
For sensors, the highest rated operating voltage is considered the rated insulation voltage.

Rated supply frequency

Frequency of the operating voltage when using alternating current

Ripple

The maximum permissible AC voltage (peak-to-peak of U_e which may be superimposed on the operating voltage U_S without affecting the function of the sensor.



Ue = Rated operating voltage
Uss = Oscillation width

$$\text{Ripple } \sigma = \frac{U_{pp}}{U_e} \times 100\ [\%]$$

Rated operating current

The permissible output current which flows through the load R_L.

Off-state current

The current which flows in the load circuit when a sensor is not conducting (open).

Short-term current carrying capacity I_k

For an AC device the short-term permissible current I_k (A_{eff}) during a specified turn-on duration t_k (ms) and repetition rate f (Hz).

Limited rated short-circuit current

Value of the unaffected short circuit current which the short circuit protected circuit can withstand during the entire turn-off time (duration of current flow) of the device under specified conditions. This current is prescribed in the standard in order to test the short-circuit protection of sensors.

No-load current

The maximum internal current consumption with no load connected to the switching output (in general at $U_{B\ max.}$ and actuated).

Minimum operating current

Minimum current (mA) required when energizing the output to maintain operation.

Output resistance

Resistance (Ra) at the output of a circuit or component. The output resistance is generally a frequency-dependent, complex resistance with amount and phase and is referred to as output resistance.

Load capacitance

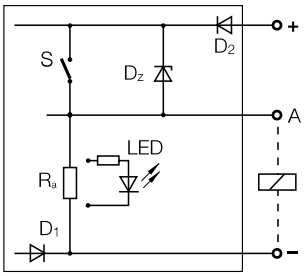
The load capacitance is the permitted total capacitance at the sensor output, including cable capacitance.

Output circuits

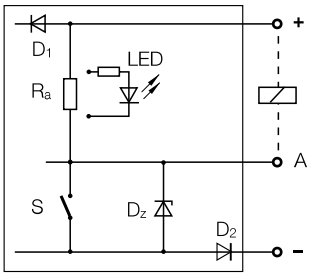
Driver stages

3-wire DC-switch

PNP, positive switching (current source)



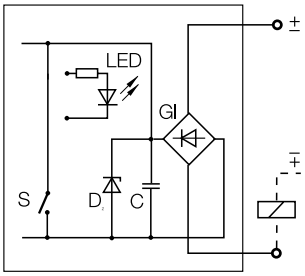
NPN, negative switching (current sink)



S = Semiconductor switch
R_a = output resistance
LED = Light diode
D_z = Z-diode, delimiter
D_1 = Polarity reversal-protected diode
D_2 = Polarity reversal-protected diode in the load circuit (only with short-circuit protected version)

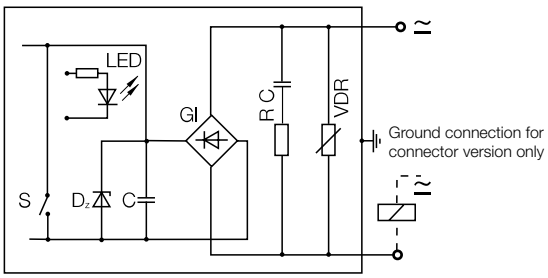
2-wire DC-switch

Non-polarized



S = Semiconductor switch
Dz = Z-diode, delimiter
C = capacitor
GI = bridge rectifier
LED = light emitting diode

2-wire AC- and AC/DC-switch (all current switch)



S = Semiconductor switch
D_z = Z-diode, delimiter
C = Sieve condenser
RC = HF-points-limit
GI = bridge rectifier
LED = Light diode
VDR = Voltage point limiter

DC 3-/4-wire

	Cable/terminals	Male	Cable/terminals	Male
	PNP (+) sourcing		NPN (–) sinking	
NO				NC				Complementary				
DC 2-wire

	polarized		Non-polarized	
NO				NC				
AC sensors

	Protection isolated (Protection Class II ⧈)	with protection ground (insulation class I)
NO		
AC/DC sensors

	Protection isolated (Protection Class II ⧈)	with protection ground (insulation class I)
NO		NC		Closer-opener, programmable		

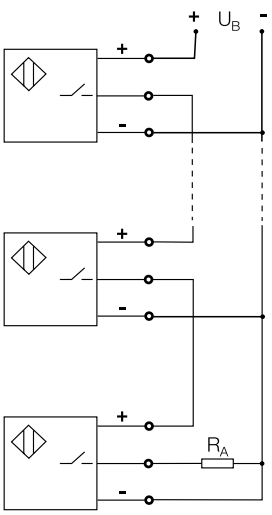
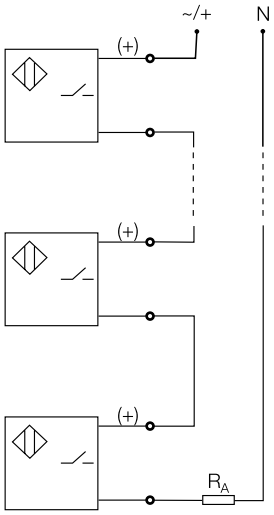
Series connection

Electrical circuit type in which the components are connected to each other in a string so that they form a single current path.

3-wire DC-switch



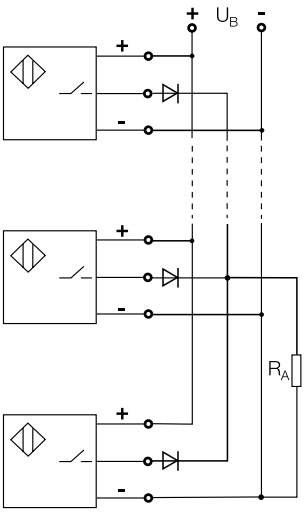
2-wire DC-switch (AC/DC)



Parallel circuit

Electrical circuit type in which all the switching elements and their same named poles are connected in common to each other, so that multiple current paths result.

3-wire DC-switch



2-wire DC-switch

Parallel wiring of 2-wire-sensors is not recommended, since missed pulses can be caused by the ready delay as the oscillator begins to oscillate.

Utilization categories in accordance with EN 60947-5-2/IEC 60947-5-2

Category		Typical load applications
AC 12	AC-switch	Resistance- and semiconductor loads, optocouplers
AC 140	AC-switch	Small electromagnetic load Ia ≤ 0.2 A; e.g. contactor relay
DC12	DC-switch	Resistance- and semiconductor loads, optocouplers
DC 13	DC-switch	Electromagnets

Smallest bending radius for standard PUR and standard PVC cables

Bending radius at rest: min. 5 × cable diameter
Bending radius in motion: min. 10 × cable diameter

Cable break protection

Characteristic of 3-wire switches which prevent malfunction when there is a cable break. A built-in diode prevents the current from flowing via the output line A.

Reverse polarity protection

Also called polarity reversal protection. This sensor technology protects against reversal of the supply voltage (plus and minus) and reversal of the connection wires (brown and blue).

Short-circuit rating

Characteristic of components or assemblies which indicates the short-circuit current which the component or assembly can withstand.

Short-circuit protection (sensors with a maximum voltage of 60 V DC)

The short-circuit protection is achieved in Balluff sensors with clocked or thermal short-circuit protection circuitry. The output stage is thereby protected against overload and short circuit. The release current of the short-circuit protection is above the rated operating current I_e. Currents from switching and load capacitances are specified in the sensor data and do not trigger this function, but rather are masked by a short delay time.

Short-circuit protected/overload protected (sensors for operation optional with AC or DC power supply)

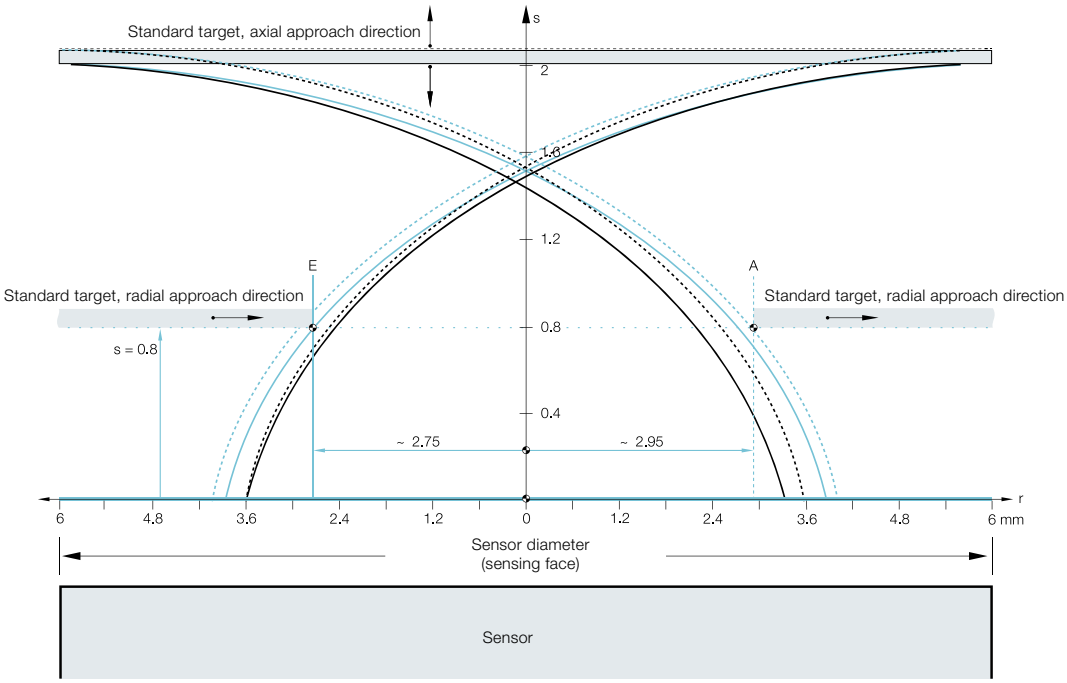
Short-circuit protected/overload protected sensors are often operated with relays or contactors as load. At switch-on, alternating current switching amplifiers (protection contactor/relay) for the sensor are briefly a substantially higher load (6...10 × rated current) than later in the later static operation, because their core is still open. The static value of the load (current) is only reached after several milliseconds. Not until the magnetic field is closed does the max. permissible rated operating current I_e listed in the data sheet flow through the sensor. The release value for a short-circuit in these sensors therefore has to be significantly greater. If for example the contactor can no longer be entire closed due to mechanical or electrical reasons, this could lead to an overload of the sensors. This is where the overload protection comes into play. It is designed as slow-acting (time-delayed). Its trigger threshold lies only slightly above the maximum permissible Ie. A reaction (in other words, shutoff) occurs, depending on the height of the overload, only after more than 20 ms. This ensures that properly working relays and contactors can be switched normally, while defective devices will not destroy the Balluff sensors. The short-circuit/overload protection usual has a bistable design and has to be reset after triggering by switching the operating voltage.

Recommended short-circuit protection device for BES033J, BES033H, BES017M

Miniature fuse in accordance with IEC 60127-2 sheet 1,
≤ 2 A (fast-acting). The fuse has to be in the load current line;
the fuse may not be placed in the output line.

Approach direction

Direction of an object as it enters the detection range/active range of a sensor.



Axial and radial damping

When damping in an axial direction, the standard target is moved concentric to the system axis. The switchpoint is thereby determined only by the distance "s" from the sensing surface of the sensor. When damping in the radial direction, the location of the switching point is additionally affected by the radial distance "r" of the target from the system axis. The diagram shows the response curves, which indicate the dependency of the switching point on "s" and "r". The primary purpose of this drawing is to show the possibility of damping using a lateral approach and the difference compared with axial approach.

Application

Due in part to manufacturing tolerances within a production run, the exact switchpoint must in any case be established on site. The solid curves indicate the respective turn-on point, the dashed curves the turn-off point A. The blue curves apply to switches with a clear zone, and the black ones for flush-mountable switches. Since the switching operation can be induced from either direction, the curves are shown mirrored from the system axis.

Examples

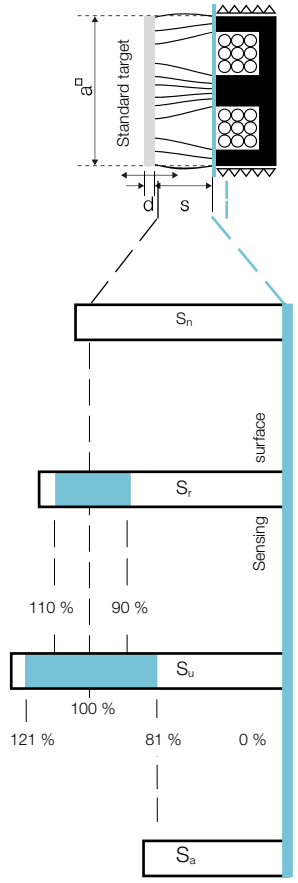
Passing objects on conveyor lines generate a signal change when their front edge crosses the turn-on curve on the entry side. The signal reverses again when the back edge of the passing object crosses the (mirrored) turn-off curve on the opposite side. In the case of reversing parts (e. g. end of travel), the signal reversal occurs at the turn-off curve on the same side.

The vertical axis in the diagram shows the distance of the switching point from the sensing surface. It is based on the rated switching distance sn. At a distance of 0.8 mm, a laterally approaching target reaches the solid line turn-on curve at point "E" and leaves the turn-off curve at point "A". the horizontal axis in the graph is referenced to the radius of the sensing surface. The zero point of this axis lies in the center of the shell core cap. In our example for the M12 switch, the radius is r = 6 mm.

Switching distances

Switching distance

The distance between the standard target and the sensing surface of the sensor at which a signal change is triggered as per EN 60947-5-2. For a normally open switch this means from OFF to ON and for normally closed from ON to OFF.



Assured switching distance S_a

Switching distance within which assured operation of the sensor at a specified voltage and temperature range is given ($0 \leq s_a \leq 0.81\ s_n$).

Effective operating distance s_r

The switching distance of a single proximity switch measured under specified conditions, e.g. flush mountable, rated operating voltage U_e, temperature T_a.

Rated operating distance S_n

Maximum achievable switching distance from the standard target under device specification (generally with s_n as shipped from the factory).

Usable operating distance

The permissible operating distance is the permitted switching distance within fixed voltage and temperature limits ($0.81\ s_n \leq s_u \leq 1.21\ s_n$).

Switching distance labeling

Switching distance	Size	Switching distance
■ Standard-switching distance according to EN 60947-5-2		
■■ **2 ×** switching distance compared to standard	Ø 3 mm*	1 mm flush
	Ø 4 mm/M5*	1.5 mm flush
	Ø 6.5 mm...M30	1.5...2-x
■■■ **3×** switching distance compared to standard	Ø 3 mm*	3 mm non-flush
	Ø 4 mm/M5*	5 mm non-flush
	Ø 6.5 mm...M12	2.2...3-x
	M18...M30	depending on version
■■■■ **4×** switching distance compared to standard		

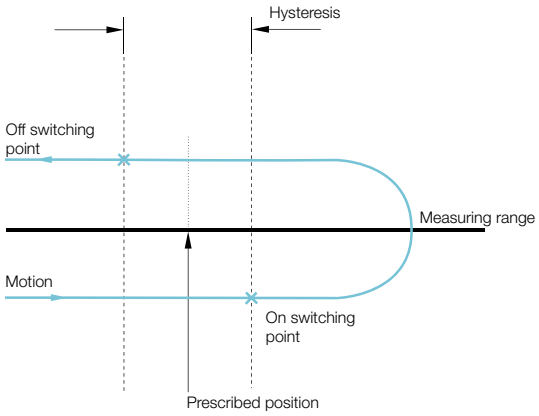
*Information for switching distance in mm. The switching distances of these sensors are not standardized.

Repeat accuracy

Variance in the output values when approaching a mechanically prescribed position repeatedly from the same direction.

Hysteresis

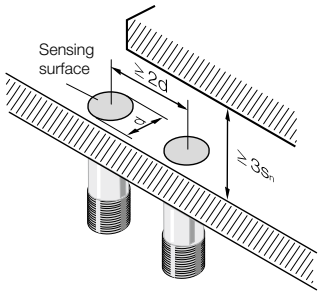
Signal difference resulting for measurement sensors when a mechanically prescribed position is approached from one side, then crosses this point and afterwards approaches this same position from the other direction. Position difference between switching point (object approaches) and switch-back point (object travels away) for switching sensors.



Installation in metal: Sensors with standard switching distance ■

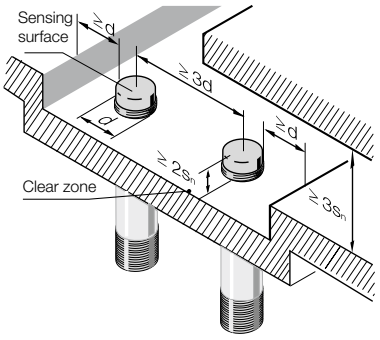
Flush mountable sensors

Flush mountable sensors can be installed with their sensing surfaces flush to the metal. The distance to the opposite metal surfaces has to be ≥ 3 s_n, and the distance between two sensors (with row mounting) has to be ≥ 2d.



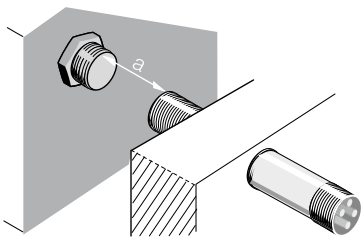
Non-flush mountable sensors

Non-flush mountable sensors can be identified by their "caps", since they have no metal housing surrounding the area of the sensing face. The sensing surface must extend ≥ 2 s_n from the metallic installation medium. The distance to the opposite metal surfaces has to be ≥ 3 s_n, and the distance between two sensors (with row mounting) has to be ≥ 3 d.



Opposing installation of two sensors

The opposing (facing) installation of two sensors requires a minimum distance of a ≥ 3d between the sensing faces.



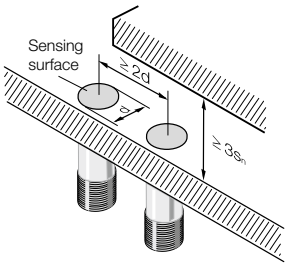
Installation medium

Materials	Description
Ferromagnetic materials	Iron, steel or other magnetizable materials
Non-ferrous metal	Brass, aluminum or other non-magnetizable materials
Other materials	Plastics, electrical non-conductive materials

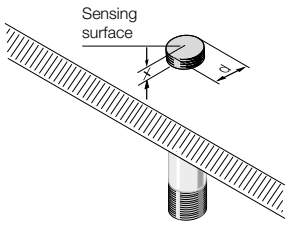
Installation in metal: Sensors with 2 × switching distance ■■

Flush mountable sensors

Flush mountable sensors can be embedded flush up to their sensing surfaces in non-ferrous materials. Installation in non-ferrous metal may result in a reduction of the switching distance. The distance to the opposite metal surfaces has to be ≥ 3 sn, and the distance between two sensors (with row mounting) has to be ≥ 2d. In order to install the sensor in ferromagnetic materials, the following guidelines are used for dimension "x".



Size d	Dimension x
Ø 3 mm	1 mm
Ø 4 mm	1.5 mm
M5	1.5 mm
Ø 6.5 mm	0 mm
M8	0 mm
M12	1.5 mm
M18	2.5 mm
M30	3.5 mm



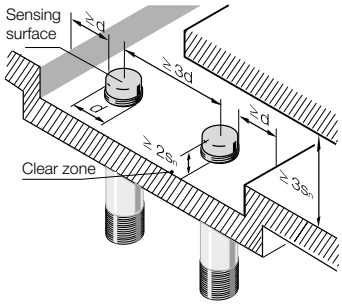
For DC 2-wire sensors, the following apply:

Size d	Dimension x
M8	0 mm
M12	0 mm
M18	0.7 mm
M30	3.5 mm

In the Factor 1 and ATEX NAMUR sensor family, dimension x is not needed when installing in metal.

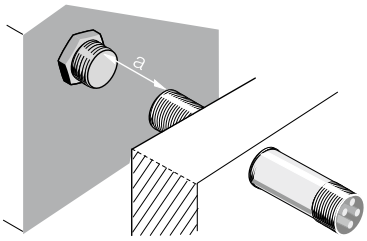
Non-flush mountable sensors

Non-flush mountable sensors can be identified by their "caps", since they have no metal housing surrounding the area of the sensing face. The sensing face must extend ≥ 2 sn from the metallic installation medium. The distance to the opposite metal surfaces must be ≥ 3 sn, and the distance between two sensors (with row mounting) has to be ≥ 3 d.



Opposing installation of two sensors

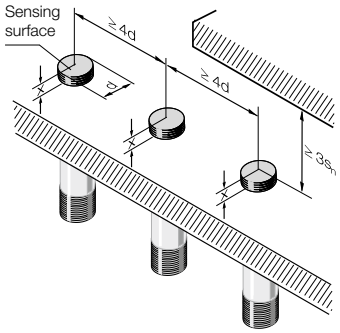
The opposing installation of two sensors requires a minimum distance of a ≥ 4d between the sensing surfaces.



Installation in metal: Sensors with 3 × and 4 × switching distance ■■■ and ■■■■

Quasi-flush mountable sensors

Quasi-flush mountable sensors require space behind the sensing surface which is free of conductive materials. Under this condition the specified switching distance is available without limitation. Dimension "×" (see fig.) indicates the shortest distance between the sensing face and the conductive material behind it.

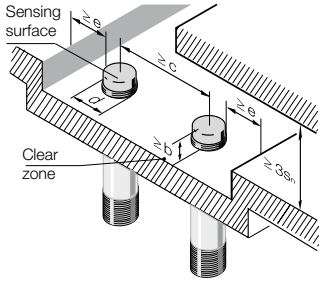


Size d	3x switching distance: Dimension x for installation in		4x switching distance: Dimension x for installation in	
	Ferromagnetic material	Other metals	Ferromagnetic material	Other metals
Ø 6.5 mm	2 mm	1 mm	3 mm	2 mm
M8	2 mm	1 mm	3 mm	2 mm
M12	2.5 mm	2 mm	4 mm	3 mm
M18	4 mm	2.5 mm		
M30	8 mm	4 mm		

Non-flush mountable sensors

Non-flush mountable sensors can be identified by their "caps", since they have no metal housing surrounding the area of the sensing face. The distance to opposing metal surfaces must be ≥ 3 s_n.

Installation conditions:

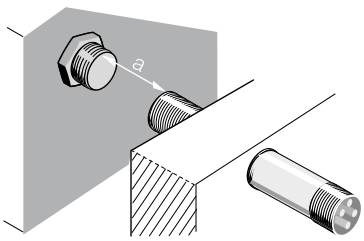


Size d	Dimension x	Dimension x	Dimension x
Size d	Dimension b	Dimension c	Dimension e
Ø 3 mm	≥ 10 mm	≥ 30 mm	≥ 10 mm
Ø 4 mm	≥ 15 mm	≥ 40 mm	≥ 20 mm
M5	≥ 15 mm	≥ 40 mm	≥ 20 mm
Ø 6.5 mm	≥ 8 mm	≥ 32 mm	≥ 8 mm
M8	≥ 8 mm	≥ 32 mm	≥ 8 mm
M12	≥ 10 mm	≥ 48 mm	≥ 12 mm
M18	≥ 20 mm	≥ 72 mm	≥ 18 mm
M30	≥ 35 mm in steel ≥ 25 mm in non-ferrous metal ≥ 20 mm in stainless steel	≥ 120 mm	≥ 30 mm

Opposing installation of two sensors

The opposing installation of two sensors requires a minimum distance of a ≥ 5d between the sensing surfaces.

For exceptions see table:

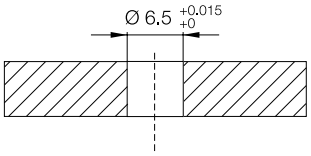


Size d	Dimension a
Ø 3 mm	20 mm
Ø 4 mm	45 mm
M5	45 mm

Installation instructions for block-style designs and sensors with special properties

Recommendation for gluing in the sensor Ø 6.5 mm smooth

Prepare and clean drill hole and sensor according to the specifications of the glue used. Coat hole and sensor with adhesive and position sensor in hole. Allow to cure. For additional instructions, see the data sheet.

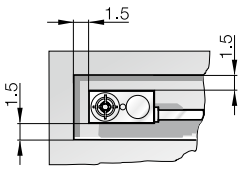


Features

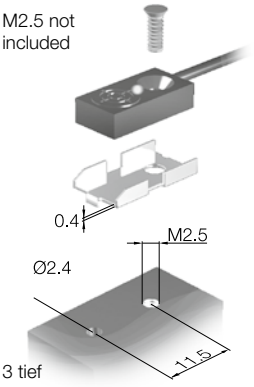
- Simple installation with glue-in sensor
- Flexible use with optional radial cable outlet

Installation notice for BES R04... with s_n 2.5 mm

Aluminum: can be mounted completely flush
Steel: all the way around with a 1.5 mm clear zone



Mounting bracket BAM00K3 for BES R04... with s_n 1.5 mm (please order separately)

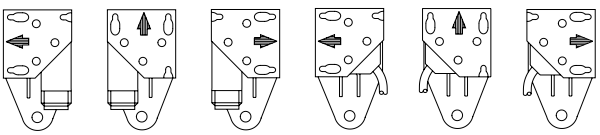


Installation note for BES030E and BES030F

Small, compact block sensor with increased switching distance for quick installation. The connector mount can be rotated and the sensing face can be oriented in three directions.

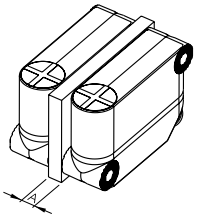
Simple replacement with no loss of position thanks to the fixed mounting plate:

- Cost savings
- No special tools necessary
- Simple to install



Installation note for BES R05KB...

Row mounting



- With plastics or no material present in the space:
- Distance A = at least 5 mm
- With metal in the space:
- Distance A = at least 4 mm

Installation note for 40 × 40 mm series Unicompact

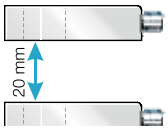
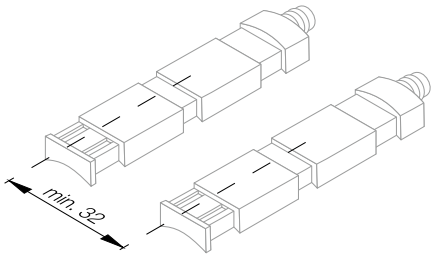
Installation in a stack



Installation note hose sensors

Centerline spacing for side-by-side mounting



INDUCTIVE DISTANCE SENSORS WITH ANALOG OUTPUT

Distance sensor with analog output

A sensor which generates a continuously varying output signal which is a function of the distance between the sensing surface and the actuation element.

Effective distance s_e

Point in the middle of a sensor's range of linearity s_l. Serves as a reference point for further specifications.

Linearity range

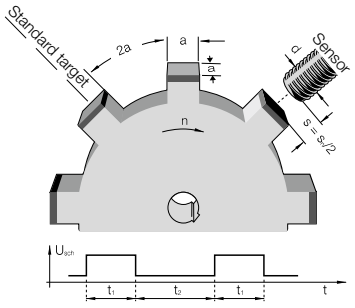
Working range in which the sensor has defined linearity.

Linearity error

Maximum deviation from the straight line that connects the zero point of the measuring range to the end point or full extension. There is a linear relationship between the position or path to be measured and the output signal for a voltage, current or digitized output information. This feature may be restricted to a defined linearity range.

Limit frequency

Maximum possible number of switching operations per second. Damping is done according to EN 60947 -5-2 with standard targets on a rotating, non-conductive disc.
The area ratio of iron to non-conductor is 1:2. The rated value of the limit frequency (–3 dB limit) is reached when the output signal has dropped to approx. 70% of the original signal level.



Measurement speed

Speed with which changes to the active surface of a sensor are registered, processed and outputted. Up to the specified measuring speed the distance to a linear moving object can be reliably detected. The direction of movement of the object is parallel to the sensing face of the sensor.

Repeat accuracy

Variance in the output values when approaching a mechanically prescribed position repeatedly from the same direction.

Response time

The time which a sensor requires in order to reliably and steadily change the output signal. The specified time, which was determined at the maximum measuring speed, includes both the electrical response time of the sensor and the time for the mechanical change of the damping state.

Slope

The slope is a measure of the sensitivity of the sensor with respect to a distance change. This physical relationship can be calculated for travel sensors as follows:

$$\text{Slope S [V/mm]} = \frac{U_a\,\text{max} - U_a\,\text{min}}{s_a\,\text{max} - s_a\,\text{min}}$$

or

$$\text{Slope S [mA/mm]} = \frac{I_a\,\text{max} - I_a\,\text{min}}{s_a\,\text{max} - s_a\,\text{min}}$$

Temperature drift

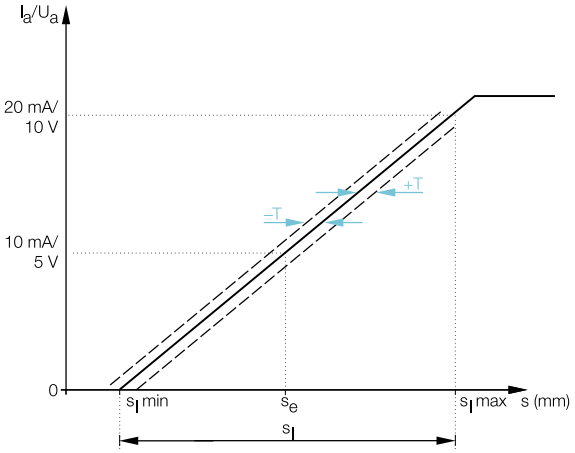
The temperature drift is the shift a point experiences on the actual output curve at different temperatures. The temperature drift is described by the temperature coefficient.

Temperature coefficient

Describes the deviation of the sensor output signal under the effect of a temperature change, and thus represents a quality criterion for the sensor also.

Tolerance T

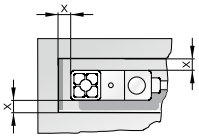
A variable which defines the manufacturing tolerance band of the output curve, thereby determining the maximum sample deviation.



Size	Tolerance for flush sensors	Tolerance for non-flush sensors
Ø 6.5 mm	±0.125 mm	
M8	±0.1 mm	±0.15 mm
M12	±0.125 mm	±0.25 mm
M18	±0.3 mm	±0.5 mm
M30	±0.6 mm	±0.8 mm
PG 36	±0.1 mm	
20×30×8 mm	±0.125 mm	
80×80×40 mm	±1.0 mm	

Installation note for BAW R03K...

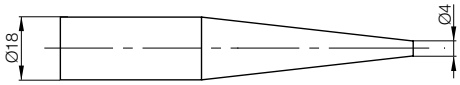
Material	Installation dimensions x
Steel	0 mm
Brass	5 mm
Aluminum	5 mm
Stainless steel	5 mm



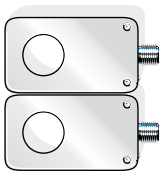
Installation note for Analog-Ringsensor

Compact analog ring sensor with 20 mm opening. Measured value changes are produced by different metallic objects or insertion depths. Applications include thickness measurement of various screws, rods or wires, and position measurement on machines by inserting conical objects into the sensor.

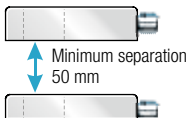
Testing cone for determining insertion depth (measuring range and linearization)



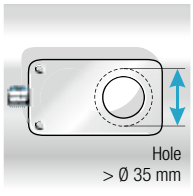
No mutual interference for front-mounting of two sensors.



No mutual interference for parallel mounting of two sensors.



When stacking multiple sensors, the separation must be at least 50 mm.

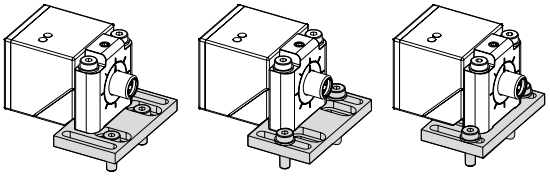


The opening should be at least Ø 35 mm for flat installation on metal surfaces.

ACCESSORIES FOR INDUCTIVE SENSORS

Mounting options for inductive sensors 40 × 40 mm

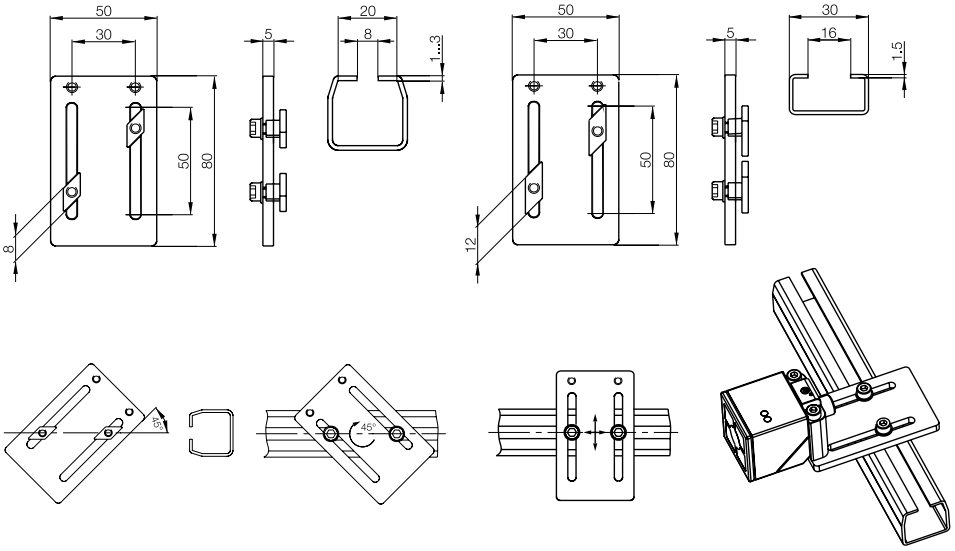
Mounting bracket BAM00JW



Three different mounting options

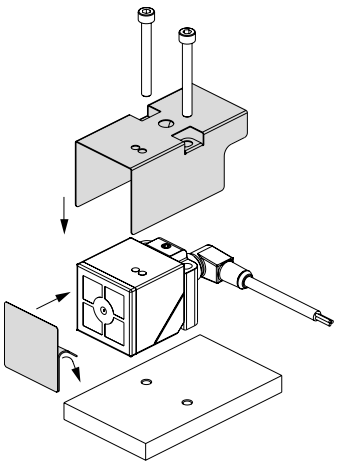
Fastener set BAM026J

- 1 mounting plate
- 2 slot nuts
- 2 cheese head screws M5 × 10 DIN 912
- 2 washers Ø 5.3, DIN 533
- 2 cheese head screws M5 × 40, ISO 4762



Weld protection for inductive sensors 40 × 40 mm

The BAM00K0 weld protection consists of a protective cover and a self-adhering PTFE film for protecting the active surface. If the sensor head is replaced, the welding protection must not be removed.

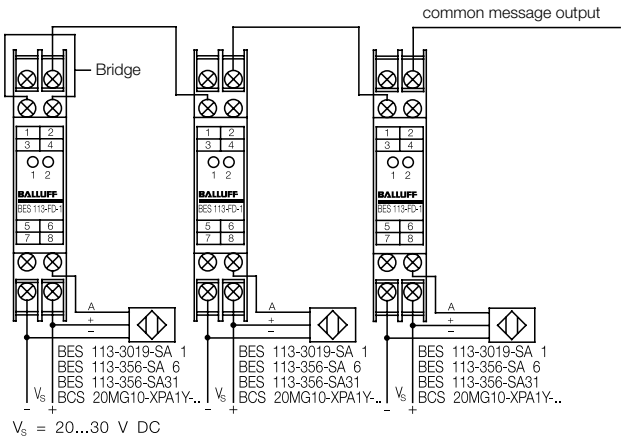


Cascading

When cascading several BES 113-FD-1 (series connection), the output (2) must be connected to the input (3) of the downstream device. The jumper between VI is not needed except for the first device. When there is a malfunction, the message appears on the last device.

The defective sensor is indicated by the first weakly illuminated LED in the cascade.

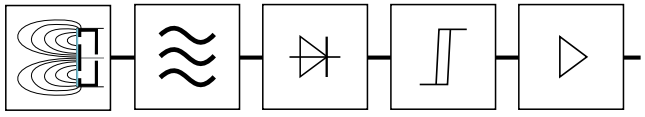
Small and space-saving, the BES 113-FD-1 can be mounted in a DIN rail according to DIN EN 50022-35.



CAPACITIVE SENSORS

Principle of operation

The non-contacting capacitive sensor converts a variable of interest in technical production terms (e.g. object or level detection) into a signal which can be processed further. The function is based on the alteration in the electrical field around its active zone. The sensor consists essentially of an electrode system, oscillator, demodulator, trigger stage, output driver/switching amplifier. The electrode systems together with an active measuring electrode (sensing face) form an open plate capacitor. This is part of an RC oscillator.



When metallic or non-metallic objects approach the sensing surface of the capacitive sensor, the capacitance of the open plate capacitor changes and the oscillator begins to oscillate. This causes the trigger stage downstream of the oscillator to trip, and the switching amplifier to change its output state. The function of the capacitive sensor can be explained using the equation for capacitance of a plate capacitor:
$C = \varepsilon 0 \times \varepsilon r \times F \times (1/S)$
εr: As a relative dielectric constant (property of the target medium)
ε0: As an absolute dielectric constant (natural constant)
F: As electrode surface
S: As distance
From the above formula it follows that objects which have a sufficiently large relative dielectric constant (εr) as well as area (as a ratio with the sensing surface) and sufficiently close distance are detected by the capacitive sensor. In addition to the described universal technology in which the sensor is a component of an oscillator circuit, there are also more modern technologies which satisfy the special application requirements.

Sensor for object detection (flush)

Sensors with a straight line electrical field (no side sensitivity). These detect solid bodies, e.g. cartons, paper stacks, plastic blocks and plates as well as glass. They also detect media levels through a wall made of plastic or glass. The wall thickness may not exceed 4 mm.

Sensor for level detection (non-flush)

Sensors with a spherical electrical field. These units are designed to detect the product, bulk goods or liquids (e.g. granulate, sugar, flour, corn, sand, or oil and water) with their sensing surface, preferably by contacting the medium or through a glass or plastic wall.

Foam and residue compensation (smart level technology)

Patented technology which enables optimal detection of levels of electrically conductive (polar) media (water, lyes, acids, ...). This is accomplished with direct contact (immersion probes) and through a maximum 10 mm thick wall of plastic, glass or ceramic. The sensors which are based on this technology compensate for the dielectric effect of the container wall and enable reliable distinguishing between the target medium and its build-up, films and foaming.

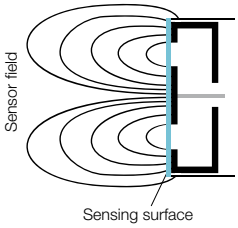
Setting the sensitivity on capacitive sensors

In most cases adjusting the sensor sensitivity (capacitance value which when exceeded causes the sensor to switch) to the environment is required (pre-loading by other objects in the capture area, e.g. a container wall). The setting is done depending on the device generation using a potentiometer, a key, a separate line or IO-Link.

Definitions and Characteristic Values

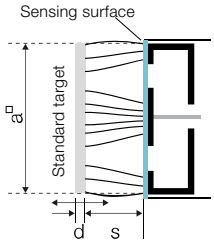
Sensing surface

Actively measuring area and thereby the externally sensitive electrode/plate of the electrode system. It is generally somewhat smaller than the surface of the cover.



Standard target

A square plate made of Fe 360 (ISO 630), used to define sensing distances per EN 60947-5-2. Thickness is 1 mm; the side length "a" corresponds to the diameter of the inscribed circle of the active surface or 3 s_n, if the value is larger than the named diameter.



Rated operating distance S_n

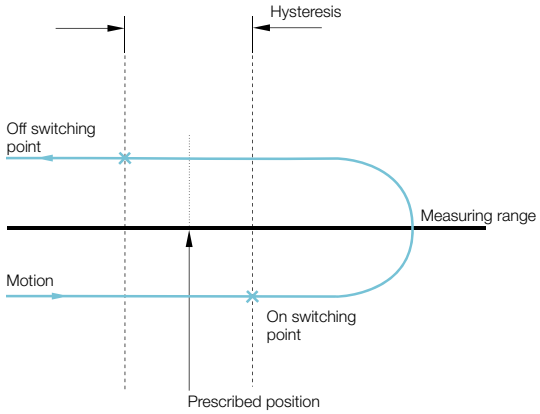
Maximum achievable switching distance from the standard target under device specification (generally with s_n as shipped from the factory).

Effective operating distance S_r

The switching distance of a single proximity switch measured under specified conditions, e.g. flush mountable, rated operating voltage U_e, temperature T_a.

Hysteresis

The hysteresis is the difference in distance between the switch-on point (for an object that is approaching) and the switch-off point (for an object that is receding).



Repeat accuracy

Variance in the output values when approaching a mechanically prescribed position repeatedly from the same direction.

Switching frequency

The maximum speed at which the sensor can reliably detect an object under standardized conditions. This corresponds to the maximum number of switching operations (ON/OFF) per second. The value is dependent on the size and speed of the object and its distance from the sensing face.

Temperature drift

The temperature drift indicates by what percentage amount of Sr the switching distance may change (maximum) within a defined temperature range.

Ambient temperature T_a

The maximum permissible temperature range at which a sensor may be operated while ensuring reliable functioning of the sensor.

Degree of protection

Indicates the suitability of electrical components for various ambient conditions and protection of persons from potential hazard in their use. The degrees of protection are specified according to IEC 60529. Code letters IP (International Protection Marking) designate protection against shock hazard, ingress of solid foreign bodies, and water, for electrical equipment. Example IP69K: Protection against ingress of water at high pressure and steam cleaning per DIN 40050 Part 9.

Output functions, connections and electric characteristic values

Normally closed (NC)

Also "normally closed" – sensor principle/output function in which the switching output is inactive (not energized) when the sensor detects an object. The switching output is energized when no object is present.

Normally open (NO)

Also "normally open" – sensor principle/output function in which the switching output is active (energized) when the sensor detects an object. The switching output is not energized when no object is present. This principle is the most commonly used in automation technology.

PNP

Switched positive – the load is connected to negative and the positive is switched.

NPN

Switched negative – the load is connected to the positive and the negative is switched.

PNP/NPN (push/pull)

The sensor can be used both as PNP or NPN, depending on the wiring of the load.
(The outputs from multiple devices cannot be wired in parallel)

PNP/NPN NO/NC codable

The sensor can be used both as PNP or NPN, depending on the wiring of the load.
By reversing the supply voltage (brown to –, blue to +) the switching function can be set from NO to NC.

IO-Link

The capacitive sensor can with an appropriate counterpart (master) enter into data communication (com2, 30Kbit) through its switching output. On one hand it can transmit much data (e.g. the continuous degree of damping by an object or fill medium as a numerical value), and on the other hand be configured remotely from the counterpart. If there is no master the sensor automatically goes into its normal switching mode (SIO): e.g. PNP/NC

Analog output

Output switches between $+U_B$ and $-U_B$. By reversing the supply voltage (brown to –, blue to +) the switching function can be set from NO to NC.

Bending radius at rest: min. 5 × cable diameter
Bending radius in motion: min. 10 × cable diameter

Operating voltage U_B

Voltage range (V) n which flawless functioning of the sensor is assured.
It includes all voltage tolerances and ripple.

Voltage drop U_d

The maximum voltage loss of the switching final stage between switching output and $+U_B$ (PNP) or $-U_B$ (NPN) at the maximum specified load current.

Ripple

The maximum permissible AC voltage (peak-to-peak of U_e) which may be superimposed on the operating voltage U_S without affecting the function of the sensor.

Output current I_e

The maximum current with which the output of the sensor may be loaded in continuous operation. Also referred to as operating current.

No-load current

The maximum internal current consumption with no load connected to the switching output (in general at $U_{B\ max.}$ and actuated).

Short-circuit protection

Protective device for overload and short-circuit. Present in all our DC sensors. In the event of overload or short-circuit at the output, the output transistor is automatically switched off. As soon as the malfunction has been corrected, the output stage is reset to normal functioning.

Reverse polarity protection

Also called polarity reversal protection. This sensor technology protects against reversal of the supply voltage (plus and minus) and reversal of the connection wires (brown and blue).

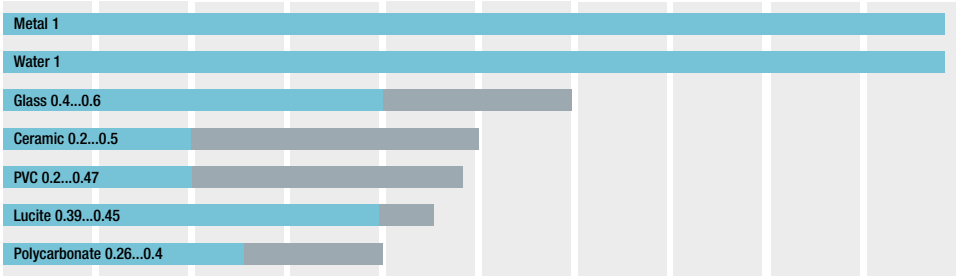
Reverse protected

The sensor electronics is protected against any possible reversal combination of all the leads.

Correction factors and guide values for smart level technology

Conditions of operation and correction factors

If an electrically non-conducting actuation element (target) enters the sensor field, the capacitance changes proportionally to εr and to the immersion depth or to the distance to the sensing surface. Since the rated switching distance sn is based on a grounded standard target made of Fe , the switching distances must be corrected when using other materials:



These data depend among other things on the sensor type and the object dimensions and should be used for reference only.

Application area for foam and residue compensation (smart level technology) with guide values

The media and conductivity values given here are only guide values and are for general orientation only. Basically all the media listed can be reliably detected. The differences are in the compensation ability for buildup, foaming and films when the level is falling. When in doubt, testing should be carried out, since factors such as temperature and media concentration can affect the conductivity values. Please contact us.
Conductivity values for other media on request.

Toothpaste	Beer	Seawater	Nitric acid (12 %)

Application and setting examples for basic sensor types

Flush sensors

Normally, the rectilinear field of flush-mounted sensors scans objects from a distance.
To ensure flawless switching of the sensor, the maximum switching distance must be checked before using the device. The following example applications show how you can do this.

Detecting solid bodies made of different materials

A flush mountable capacitive sensor will be used to detect a ceramic plate. The sensor is set to the maximum rated switching distance sn of, for example, 4mm from metal or by approximation from your hand. With this preset distance of 4 mm, move the sensor towards the ceramic plate. The rated switching distance sn to the ceramic plate has been reduced to approx. 2mm.
The distance of 2 mm is now the maximum permissible switching distance for the ceramic plate. Only adjustment for smaller sensing distances than 2mm is permitted.

Attention! To ensure that our sensors work reliably within their technical specifications, they have a greater sensing distance than the maximum rated switching distance sn indicated in the catalog. If the user now adjusts the switching distance for the above described ceramic plate to 4 mm, the sensor will operate outside the permitted range. This entails a risk that temperature and other environmental factors, plus electrical interference in the mains, may lead to faulty switching by the sensor.

Sensing levels through container walls

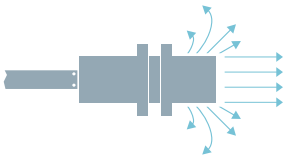
A flush mountable capacitive sensor will be used to detect a liquid, e.g. water, through the container wall. The dividing wall must be made of a non-conductive material, e.g. glass or plastic. The max. permissible wall thickness increases with the diameter of the sensing face: max. 4 mm (except SmartLevel technology).

The sensor's face (sensing surface) is now attached to the glass or plastic wall as tightly as possible. The tank is then filled with water until approx. 30 to 50% of the sensor's sensing surface is covered.

Particularly when small and ultra-small quantities of liquid are being scanned, and if the sensor has not been mounted in a form-fitting configuration (flat sensor surface on a tank wall with a small radius), 30 % should be chosen as a coverage area. Now turn the sensor's potentiometer counter-clockwise (less sensitivity) until it turns off (NO). Now turn the potentiometer clockwise again (greater sensitivity) until the LED and sensor turn on again. For modern versions with a teach function at 30-50 % coverage of the sensing face through the fill material hold down the key or placed a defined potential on the Teach line until the LED flashes (full teach).

Non-flush sensors

These capacitive sensors with their spherical electrical field are especially suited as level detectors for liquids, granulates or powders.



Sensing levels directly in the container

A non-flush mountable capacitive sensor will be used to detect a granulate in a tank. The sensor is now installed in the tank with its sensing surface (clear zone at the head as described in the catalog), in a configuration ensuring that the head is completely covered by the product.

Now turn the sensor's potentiometer counter-clockwise (lower sensitivity) until the LED, and thus the output signal, switch off. Now turn the potentiometer clockwise again (higher sensitivity) just enough until the LED, and thus the output signal, switch on again. Then turn the potentiometer another ½-turn (180°-rotation) clockwise. This compensates for possible temperature fluctuations or humidity changes in the product you are detecting. If a medium has a high εr, especially water, the sensor will react much more sensitively. Therefore the adjustment should be for around 50 % coverage or a sensor resp. immersion probe in the SmartLevel technology series should be used.

Detecting levels of conductive liquids directly in the container or through a container wall

Level sensors using SmartLevel technology detect liquid, conductive and even sticking liquids directly or indirectly through container walls. And they do it without adjustment using the factory default setting as long as the wall thickness does not exceed 6mm. For thicker walls or extremely conductive and adhering media the SmartLevel technology sensor can be adjusted.

Adjustment:

First install the sensor flush against the container wall. Bring level to 30...50 % coverage of the sensing face. Set the switching point on the potentiometer so that the sensor is just switching. For the new device generation with Teach key hold down or place a defined potential on the Teach line until the LED flashes.

Adjustment can also be made with a totally filled or empty container:

Full compensation: turn the potentiometer slowly counter-clockwise until the sensor turns off. Now slowly turn the potentiometer (with the sensor switched off) clockwise until the sensor turns on again. At the turn-on point then turn the potentiometer another half-turn (approx. 180°) clockwise and the SmartLevel sensor is adjusted.

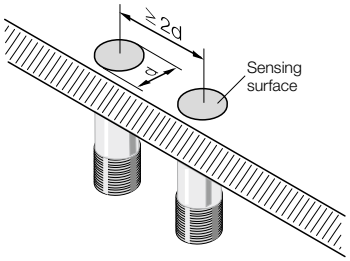
Empty compensation: Now slowly turn the potentiometer (with the sensor switched off) clockwise until the sensor turns on again. At the turn-on point the potentiometer only needs to be turned 3 times by approx. 360° counter-clockwise and the SmartLevel sensor is adjusted.

In essence the switching point for a SmartLevel sensor should be at 30-50 % coverage of the sensing face with the medium.

Installation guidelines

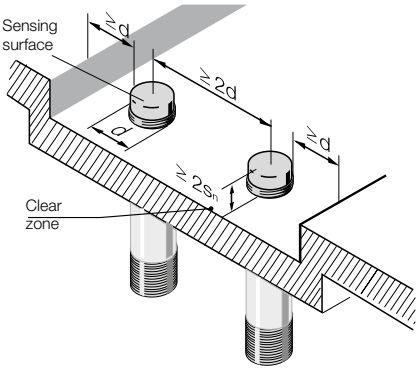
Flush-mount Proximity switches

Flush mountable sensors can be installed with their sensing surface flush to the metal. The distance between two proximity switches (in row mounting) must be ≥ 2d.



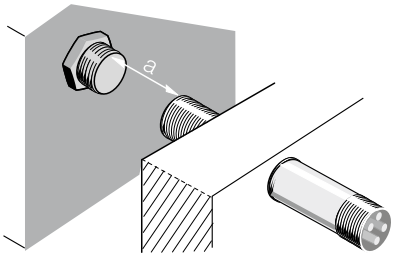
Non-flush mountable proximity switches

The sensing surface must extend ≥ 2 sn from the metallic installation medium. The distance between two proximity switches must be ≥ 2d.

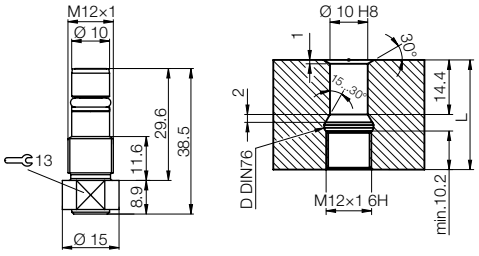


Opposing Installation of two sensors

The opposing installation of two sensors requires a minimum distance of a ≥ 4d between the sensing surfaces.



Installation note for high-temperature and pressure-resistant capacitive sensors



Installation and mounting options

Mounting sensors for object detection

Central mounting in a drilled hole
- M5, M8, M12, M18, M30
- Simple, flexible fastening with two nuts
- Flexible positioning in the sensor axis

Through-holes in the sensor
- Standard mounting for cubical sensors
- Simple mounting through threaded hole
- Clear positioning when replacing

Threaded holes in the sensor
- Central hole with M3 thread
- Very easy installation
- Clear positioning when replacing

Clamping a cylindrical sensor
- Suitable for all cylindrical designs
- Simple, reliable fastening
- Very flexible positioning

Installation as a leak sensor
- Simple to install
- Clear positioning when fastening
- Use of sensors with a fixed switching distance

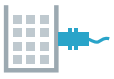
Installation of fill-level indicators

Flange mounting
- Pressure-tight screw connection
- Can be used in metal containers
- Installation in standard bushings is possible

Hole mounting
- Simple screw connection
- Can be used for every container material
- Not pressure-tight
- Suitable for powders and granules

Installation of cable ties
- Simple, subsequent fastening
- No contact with product necessary
- For non-metallic containers

Wall mounting
- Simple fastening
- For non-metallic containers
- No drilling of container
- No contamination of the medium



PHOTOELECTRIC SENSORS

Ambient light

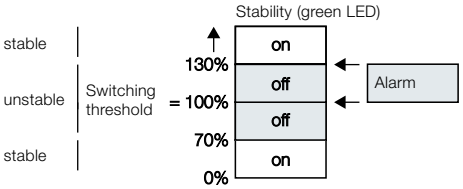
The portion of light which is picked up by the receiver, but does not originate from the emitter.

Ambient temperature T_a

The maximum permissible temperature range at which a sensor may be operated while ensuring reliable functioning of the sensor.

Alarm output

Device/function on the receiver which generates a warning signal when there is a malfunction. This can be caused by contamination or mechanical maladjustment. The alarm output is activated if the received signal lies in the alarm range for a defined amount of time.

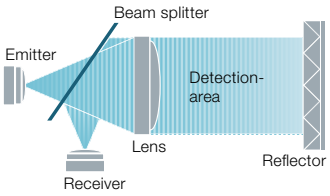


Amplifier

Amplifiers prepare signals from sensor heads or fiber optics and convert them into a switching or analog signal.

Autocollimation

Principle of reflection in which the light beam striking a reflector is reflected back to itself in parallel. The emitter and receiver use the same optical lens, so that the emitted light and the light beam reflected back from the reflector lie on the same optical axis. The advantage compared with the dual lens principle is that there is no dead zone in front of the sensor and that the switching response does not depend on the approach direction.



Background suppression (BGA)

Procedure for reliably distinguishing an object against its background. Can be done nearly regardless of the color and surface of the object. A reflecting background has no effect. Sensors with background suppression consist of a light emitter and several light receivers. By means of triangulation the position of an object can be determined. Depending on this position the switching distance can be set and the object thereby distinguished from the background.

Beam shape

Focused
With a focused light beam the emitter light is bundled at a certain distance into a minimum diameter. This location is referred to as the point of focus. At this point small parts detection and switching accuracy are at their greatest.

Collimated
With a collimated light beam the light emitted is radiated out in parallel. This means the size of the light spot remains virtually unchanged over the entire working range of the sensor. This allows distance-independent yet precise object detection.

Divergent
In a divergent light beam the light spot created by the emitter becomes larger with increasing object distance. In the case of through-beam sensors a divergent light beam makes possible simple alignment with the reflector or receiver.

Blind zone

Area between the active surface and minimum switching distance within which a target cannot be detected.

Color sensor

Photoelectric sensor for detecting and evaluating colors.

Contamination

Dirt and dust particles which collect on a sensor and reduce the range of photoelectric sensors and fiber objects compared with pure air. Deposits on the lens reduce its light transmission. The light is absorbed and scattered in the beam path. An oil-free source of compressed air can be used to prevent the effects of dirt and contamination due to impure air.

Correction factors (for diffuse sensors)

Values for determining the range of a sensor which is dependent on the differing reflection properties of an object. For example the range of the sensor is reduced with darker objects due to the greater light absorption.

For objects with different reflective properties the following correction factors can be applied (see table).

Correction factor	Object, surface
1	Paper, white, matte 200 g/m²
1.2...1.6	Metal, shiny
1	Styrofoam, white
0.6	Cotton fabric, white
0.5	PVC, gray
0.4	Wood, rough
0.3	Cardboard, black, shiny
0.1	Cardboard, black, matte

Dark switching

Type of photoelectric sensor in which the output becomes active when there is no light at the receiver.

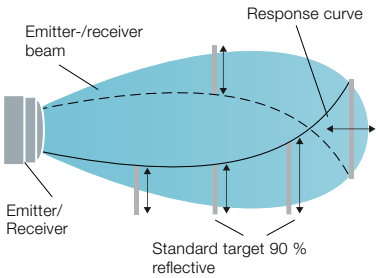
Light receiver	Amplifier	Consumer
Non-illuminated	Fully modulated	Switched on
Illuminated	Not fully modulated	switched off

Detection range

Range in which the switching distance of a sensor from the standard target can be adjusted.

Diffuse sensors

Photoelectric sensor in which the emitter and the receiver are in one housing. The alignment to a detection object is largely uncritical. A target object (e. g. a standard target which is 90 % reflective) bounces a part of the light from its surface back to the receiver. If the standard target reaches the response curve, the output signal will change. The sensing distance depends on the size, shape, color and properties of the reflective object surface. Using a Kodak gray card with 90 % reflectivity (like white paper), distances of up to 2 m can be obtained.



Distance sensor with analog output

A sensor which generates a continuously varying output signal which is a function of the distance between the sensing surface and the target point. It generates a linear output signal within a certain range (measuring range).

Fiber optics

Optical fiber made of glass or plastic with a diameter of down to 50 µm, consisting of several hundred individual fibers. Extremely flexible. The optical properties are not affected by moisture or aggressive media.

Mounting notes for fiber optics

The resistance of the sealing ring must be overcome when connecting the fiber optics to the base unit.

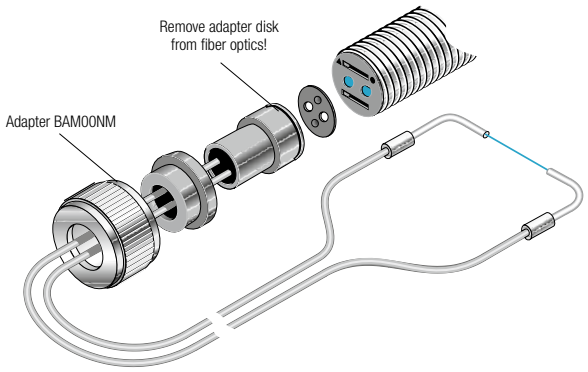
Fiber optics design

UZG type
- Polyurethane jacket
- Strain relief
- Glass optical fiber bundle
- Flexible
- Excellent chemical resistance
- Does not become brittle from oils and cooling emulsions
- Temperature resistance –20...+85 °C

MZG type
- Corrugated metal armor
- Strain relief
- Glass optical fiber bundle
- Resistant to high temperatures –20...+170 °C (up to +250 °C for a fixed installation)
- Flexible
- Crush-resistant
- Resistant to hot swarf

SMG type
- Silicon protection jacket
- Corrugated metal armor with glass optical fiber bundle strain relief
- Extended temperature range –40...+150 °C
- Highly flexible
- Crush-resistant

Mounting instruction BOS 30M with BFO 18V



Fork sensors

U-shaped housing style of through-beam sensors with the emitter and receiver facing each other. Advantage: Ease of installation, alignment and simple electrical connection.

Gray value shift

The switching distance difference when calibrating using different object reflectivities. The sensor is calibrated for a distance using a Kodak gray card with 90 % reflection. A Kodak gray card having 18 % Reflexion is used and the resulting distance measured. The difference between these two switchpoints in % is referred to as the gray value shift. The smaller the gray value shift, the more color-independently the sensor operates.

Hysteresis

Signal difference resulting for measurement sensors when a mechanically prescribed position is approached from one side, then crosses this point and afterwards approaches this same position from the other direction. Position difference between switching point (object approaches) and switch-back point (object travels away) for switching sensors.

Lasers, laser class

Designation both for a physical effect as well as a device used to generate laser beams. Laser stands for "light amplification by stimulated emission of radiation". Laser beams are electromagnetic waves. The purpose of laser protection classes is to protect persons from laser radiation by specifying limit values. Based on this, the lasers used are classified according to a scale reflecting the degree of hazard. The calculations and associated limit values relevant for the classification are described in the standard EN 60825-1:2001-11. The grouping is based on a combination of output power and wavelength, taking into account emission duration, number of pulses and angle extension.

Balluff sensors have the following laser protection classes:
Class 1: Non-hazardous, no special caution.
Class 2: Low power, eyelid closing reflex is sufficient.

Light

The medium with which photoelectric sensors operate. In the sensor there is a change in the light intensity on an optical path (between emitter and receiver) caused by a target object. This change is evaluated by the sensor. Depending on the properties of this object and the characteristics of the optical beam, the light beam is either interrupted, reflected or scattered. The emitter usually consists of high-power red light LEDs and laser LEDs, with photodiodes or CCD (charge coupled devices) used as the receiver. Red light LEDs are used because the light beam and the detection point can be measured visually and can be adjusted more easily. In the case of laser sensors the light spot is usually more sharply delineated and is highly visible. Even over great distances.

Light band sensor

LED light band sensor
Photoelectric sensor with LEDs consisting of multiple emitters and receivers in a row in separate housings. The close arrangement of the optical components means the emitter generates a light band is generated and the entire light intensity measured at the facing receiver side.

Laser light band sensor
Photoelectric laser sensor in which a laser beam is refracted on the emitter side over a prism at a sharp angle for generating a homogeneous light band. The receiver contains a CCD (charge coupled device) used for precisely detecting edges, even at up to 2 m of distance. A CCD consists of very precisely arranged light-sensitive cells whose charge is measured and processed by the electronics.

Light grids

Photoelectric sensor in which the emitter and the receiver are located in separate housings. By placing individual emitter and receiver elements in a row a large area can be monitored. As soon as an object enters this area, a switching signal is triggered. Light grids with analog output also tell you the object location or its size.

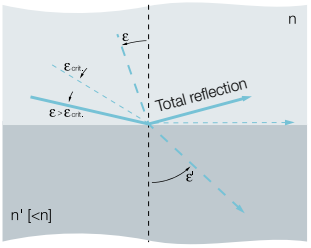
Light-on switching

Type of photoelectric sensor in which the output becomes active when there is light at the receiver.

Light receiver	Amplifier	Consumer
Illuminated	Fully modulated	Switched on
Non-illuminated	Not fully modulated	switched off

Light refraction

A change in direction of light rays at the interface between two optical media having different optical density (e.g. glass/air). The degree of refraction depends on the quotients of the optical densities of both media and on the angle of incidence ε to the optical axis.
If a light beam travels from a dense medium, n, into a thinner one, n', its course there will show a greater angle ε '. Above $\varepsilon_{crit.}$ (critical angle at which the refracted ray travels parallel to the interface). If however it again enters the medium having density n, the result is total reflection.



Light type

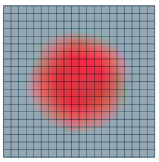
Photoelectric sensors make use of the differing wavelengths of light, with some using visible light in different colors and others using light invisible to the human eye. Photoelectric sensors use mainly the following light types:
Red light: Visible, easy to align, universal for many applications
Infrared light (IR): Invisible, essentially color-independent, ideal in dirty environments
Laser red light: Visible, physical properties of the laser make it ideal for small parts detection and for long ranges, high switching accuracy
White light: Visible, for special applications, e.g. contrast and color sensors
Ultraviolet light (UV): Hardly visible, ideal for luminescent marks

MICROmote

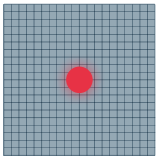
Photoelectric sensor system which combines an external processor unit (amplifier) with exceptionally small photoelectric sensor heads. This allows miniaturized sensor heads to be realized.

Microspot/Pin Point

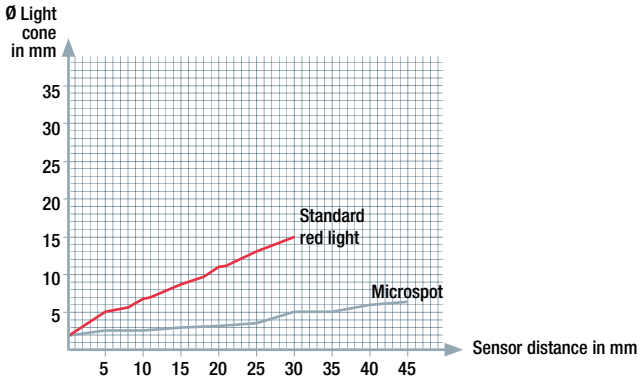
LEDs with opening angles of ≤3°. These are used where small, extremely sharp light spots are required.



Standard red light



Microspot

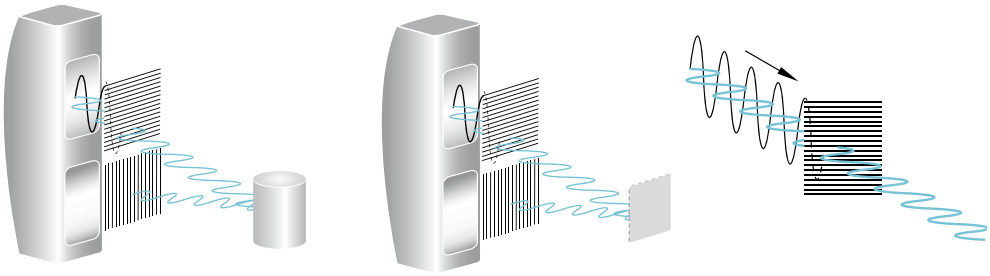


On delay

Time a sensor requires to be ready when an object enters the capture range.

Polarizing filter

Light filters which allow only a certain oscillation plane to pass and thereby effectively filters out scattered light: the light is polarized. Reduces reflections from metallic surfaces and reduces spurious switching. Also referred to as a polarizing filter.



Relative humidity

Ambient condition which can affect the sensor function. For example if the lens is subjected to high relative humidity.

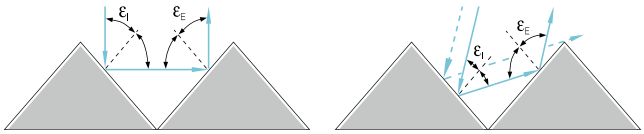
Reflector

Light beams extend to a straight line in free space. Upon striking an object, they are reflected. Depending on the surface properties of the object, we distinguish between the following reflection types: total reflection, retroreflection, and diffuse reflection.

In optical object detection and image processing retro-reflectors are often used. The retro-reflection is caused by two mirrors aligned vertically to each other. A light beam is again projected back through double reflection in the same direction. The angle of incidence can thus be altered in a relatively wide range. The two-dimensional principle of retroreflection can be carried over to a spatial system with three mirrors which are oriented at right angles to each other (one corner of a cube standing on its point). A light beam entering this system is totally reflected by all three surfaces and exits parallel to the incident beam.

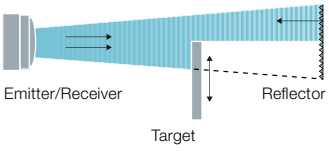
Retroreflection

A light beam which is again projected back through double reflection in the same direction. The angle of incidence can thus be altered in a relatively wide range. Is caused by two mirrors at vertical angles to each other.



Retroreflective sensor

Photoelectric sensor in which the emitter and the receiver are in one housing. A reflector on the opposite side of the beam bounces the emitter's light back to the receiver. A target object interrupts the reflected light beam and causes a change in the output signal. With reflective surfaces it is recommended that the light reflected from the object be filtered out using a polarizing filter in front of the receiver, in order to prevent any possible fault signals.



Reverse polarity protection

Also called polarity reversal protection. This sensor technology protects against reversal of the supply voltage (plus and minus) and reversal of the connection wires (brown and blue).

Sensor heads

Sensor heads consist of an emitter and receiver element. In through-beam sensors the emitter and receiver elements are housed in separate enclosures.

Short-circuit protection

Protective device for overload and short-circuit. Present in all our DC sensors. In the event of overload or short-circuit at the output, the output transistor is automatically switched off. As soon as the malfunction has been corrected, the output stage is reset to normal functioning.

Smallest bending radius for standard PUR and standard PVC cables

Bending radius at rest: min. 5 × cable diameter
Bending radius in motion: min. 10 × cable diameter

Teach-in

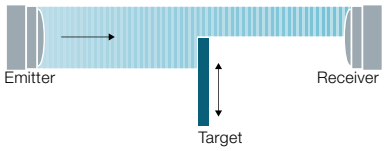
Method for setting sensors by pressing a button. No potentiometers or slide switches are used. Because there are defined setting increments, the advantage is that the sensor cannot be set in an unreliable range. The microcontroller also assumes control of the contamination indicator and the contamination output.

Test input

Input on a photoelectric sensor which enables function checking of the emitter and receiver by interrupting its light pulses. Contamination or maladjustment of the optical axis causes the emitter signal to reach the receiver only weakly, if at all. Therefore, the output will not switch, even though the test input is activated. The test function corresponds to a remote monitoring of the photoelectric sensor and enables a preventive system control.

Through-beam sensor

A photoelectric sensor consisting of separate emitter and receiver units which must be aligned on opposite sides of the sensing path. Long ranges of up to 50 m. When an object interrupts the light beam, the receiver switches, i.e. the output signal changes – regardless of the surface composition of the target. In unfavorable conditions (e.g. dust, moisture, oil), you achieve the best results with through-beam sensors.



Time-of-flight sensor

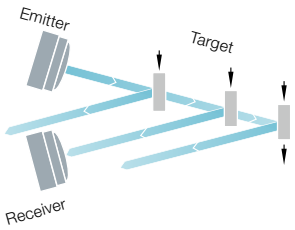
Photoelectric sensor in which the light time-of-flight between emitter, the object and the receiver is measured. The duration of this time-of-flight allows the distance to the object to be determined.

Transmission

Measure for the transparency of a medium. It is defined as the ratio of: – passed to – entering light (in %). Diffuse transmission is the term which is used when the light is partially or completely diffused.

Triangulation

Procedure whereby the light cones of the emitter and receiver lobe of a through-beam system intersect each other at a narrow angle. A target object is detected where the lobes overlap. The emitter light which is reflected or diffused from objects outside this limited zone cannot be registered by the photo-receiver. Benefit: With triangulation, relatively small changes in distance can be recognized (e.g. slots, offsets on shafts). Color and shape of the object have very little effect.



Turn-off time

The time a sensor requires to respond when the target leaves the detection range at a factor of 0.5 of the radiant power.

Sensors part 2

Precise, flexible all-rounders

ULTRASONIC SENSORS

Whether for position detection, distance detection or detection of powdery and fluid media – our ultrasonic sensors are precise all-rounders. They measure fill levels, heights and sag without making contact as well as count and monitor the presence of objects. These universal sensors work regardless of color or surface composition and are unaffected by transparent objects with strong reflection. Fog, dust and impurities are also not a problem for them. Their high resolution and small blind zones guarantee the highest precision. Since they offer a generous detection range, they also work reliably at greater object distances.

Ultrasonic sensors from Balluff are available as switching or analog output types. Depending on the output signal you can either reliably detect and count objects or determine distances with high precision. These sensors therefore have versatile uses.

The most important benefits

- Contactless detection
- Reliable in critical environmental conditions such as fog, dust and impurities
- Irrespective of color, transparency, reflection properties and surface finish on the object
- Precise detection of even smaller objects
- Rectangular and cylindrical heads allow for greater freedom of design
- Can be used as normally open or normally closed – various output functions

Precise positioning in very fast-moving applications

MAGNETIC ENCODERS

Balluff's magnetic encoders were developed for precise positioning and speed detection in very dynamic applications. The highly-precise, fastresponse encoders are optionally equipped with magnetic linear or rotational measuring elements. They are appropriate for linear as well as rotational applications, and incremental or absolute position detection.

Their rugged design makes them ideal in extreme ambient conditions. They also ensure increased uptime of your machines and equipment.

Features

- Contact-free and therefore wear-free
- Incremental or absolute interfaces
- High resolution to 1 µm
- Measurement lengths to 48 m
- Flexible installation and handling
- Long operational life, since very rugged

Preferred models

- BML-S1H1-S6QC-M3CA-D0-KA00,3-S284 (BML0393)
  Approach direction longitudinal to tape, SSI interface, binary code increasing, 256 length coding, pigtail 0.3 m with M12 plug
- BML-S1H2-S6QC-M3CA-D0-KA00,3-S284 (BML0394)
  Approach direction transverse to tape, SSI interface, binary code increasing, 256 length coding, pigtail 0.3 m with M12 plug

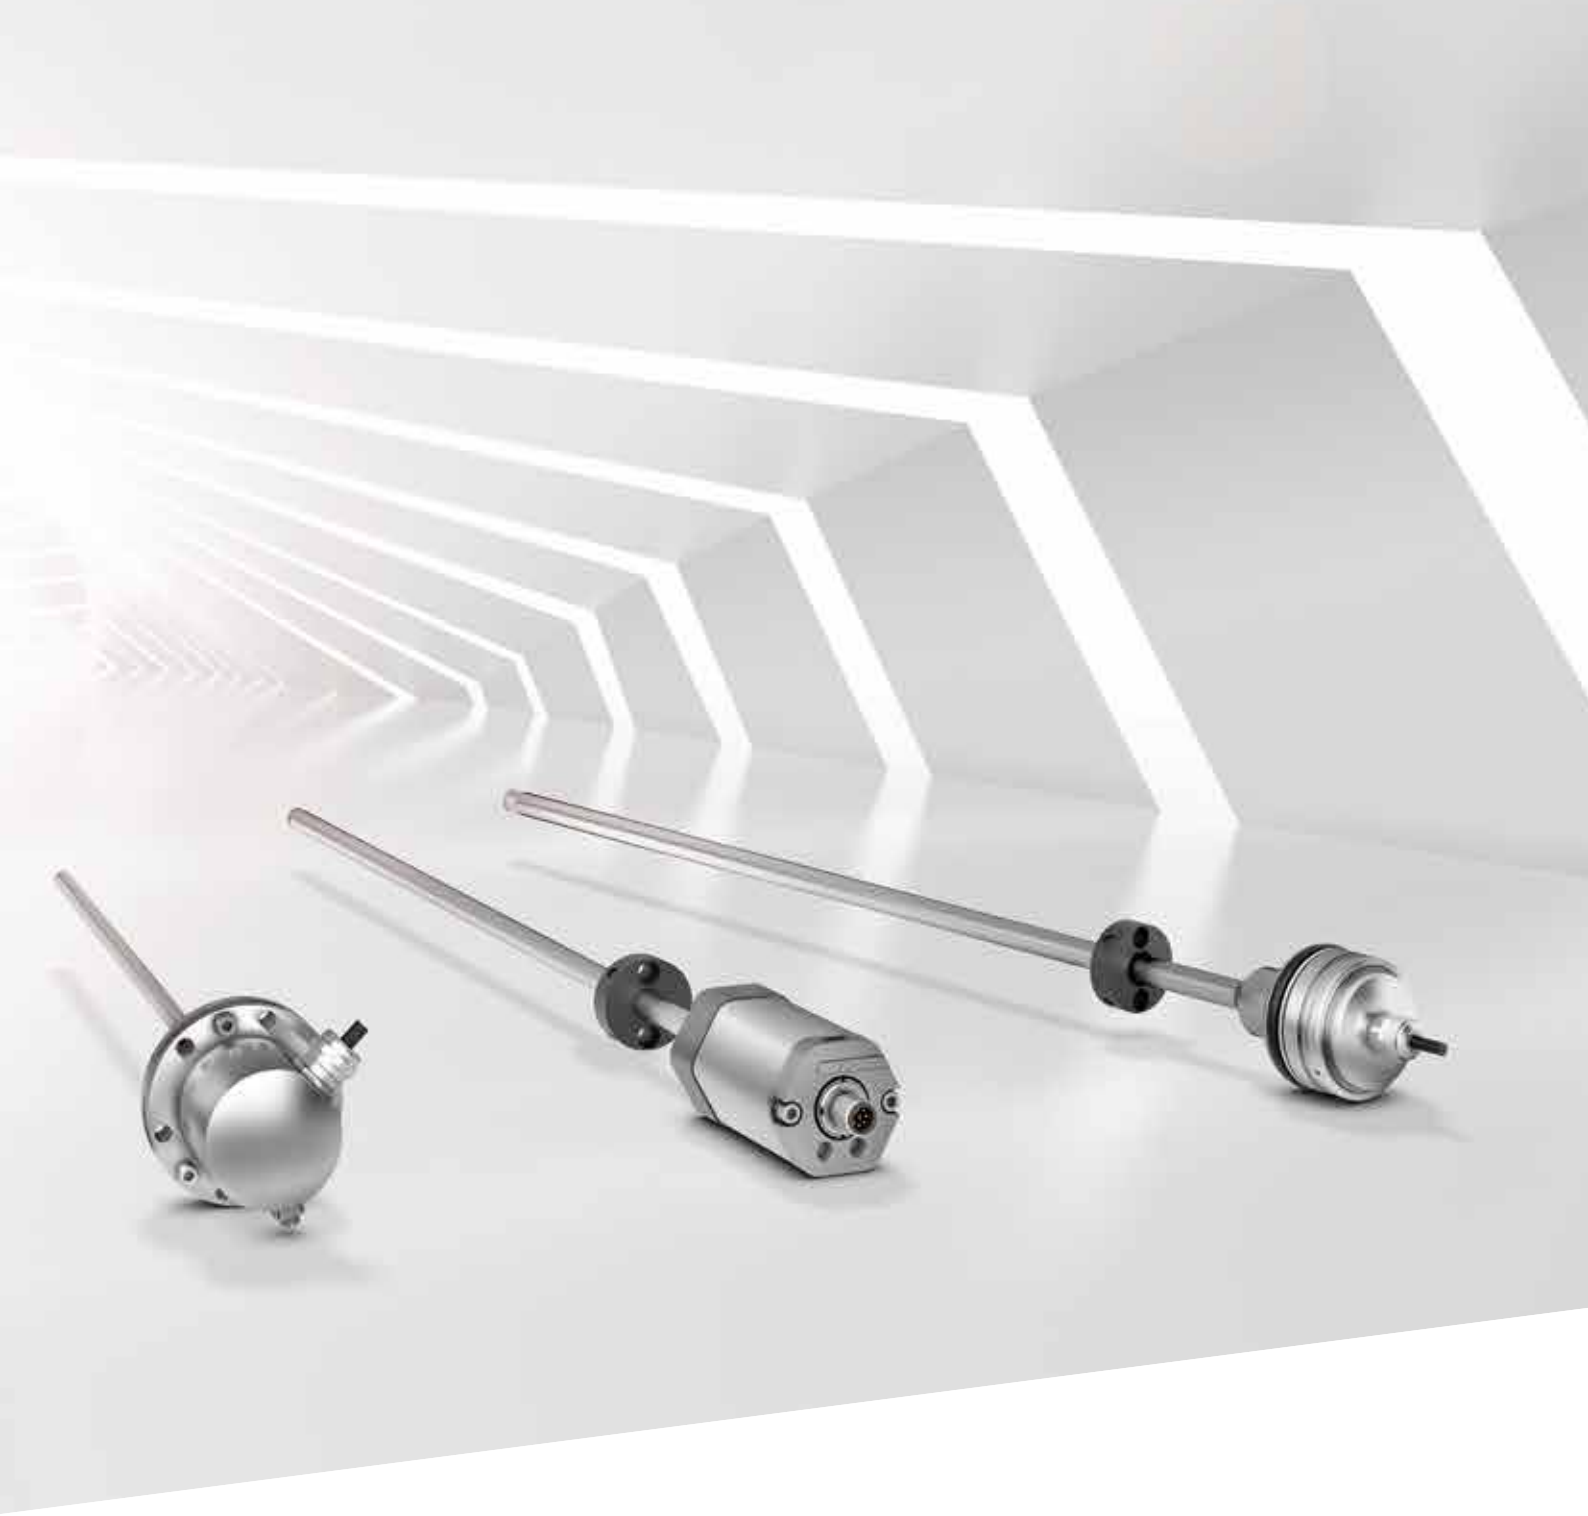
Reliable even over long stroke lengths and in harsh conditions

MAGNETOSTRICTIVE SENSORS



Magnetostrictive sensors come into use wherever high reliability and precision is demanded in position and speed measurement. Also over long stroke lengths.

Our contact-free and absolute measuring systems are suitable for all industry-standard interfaces for a wide range of applications. Even under extreme surrounding conditions, they guarantee a high machine and system availability.

Features

- Precise, absolute measurement without a reference run
- Contact-free, so wear- and maintenance-free
- Resistant to shock, vibration and contamination
- Hermetically sealed housing
- Highly dynamic control applications through synchronizedeasurement data
- High durability and long service life
- Flexible installation and handling

	BTL7 -P- SERIES - ANALOG VOLTAGE
Interface	Analog, voltage
Measuring length	50...7620 mm
Repeat accuracy	± 10 µm
Linearity deviation	nnnn = 0050…0500: ± 50 µm nnnn = 0501…5500: ± 0.01% FS nnnn > 5500: ± 0.02% FS

Linearity deviation	nnnn = 0050…0500: ± 200 µm, nnnn > 0500: ± 0.04% FS
Operating voltage Ub	10...30 VDC
Ambient temperature	-40...60 °C
Mechanical configuration	Fastening 3/4“ threads
Housing material	Aluminum, Anodized
IP rating	IP67
Approval/Conformity	CE IECEx EAC WEEE
Ex category	ATEX: 3G (EPL Gc), ATEX: 2D (EPL Db), ATEX: 3D (EPL Dc), IECEx: EPL Gc, IECEx: EPL Db, IECEx: EPL Dc

BTL7-abcd-Mnnnn-fh-i-lm

BTL7
Magnetostrictive linear position sensor
Generation 7

a interface
C = Current output 0 ... 20 mA
E = Current output 4 ... 20 mA

b Operating voltage
5 = 10 … 30 V

c + d Interface characteristic 1 + 2
04 = 1 output rising, configurable
05 = 1 output falling, configurable

Mnnnn Nominal length (4-position)
M0500 = metric in mm
(M0025…M7620: for rod diameter 10.2 mm)

f Form factor
TZ = Threads 3/4“-16UNF, for O-Ring

h Redundant
2 = 2 times redundant
3 = 3 times redundant

i Variant
NEX = Ignition class „nA“ and „tb“

l Connection type
S = Connector
KA = Cable (PUR)

m Connection type characteristic 1
for connector:
32 = M16x0.75 connector with 8 pins
for cable (length in meters):
02, 05, 10, 15, 20

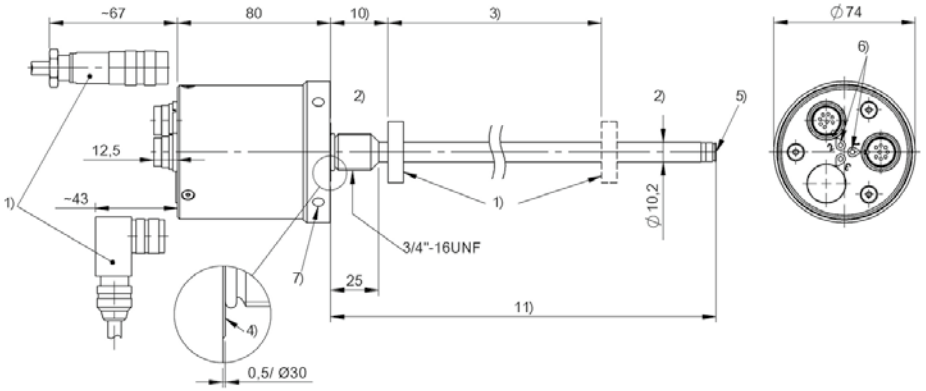
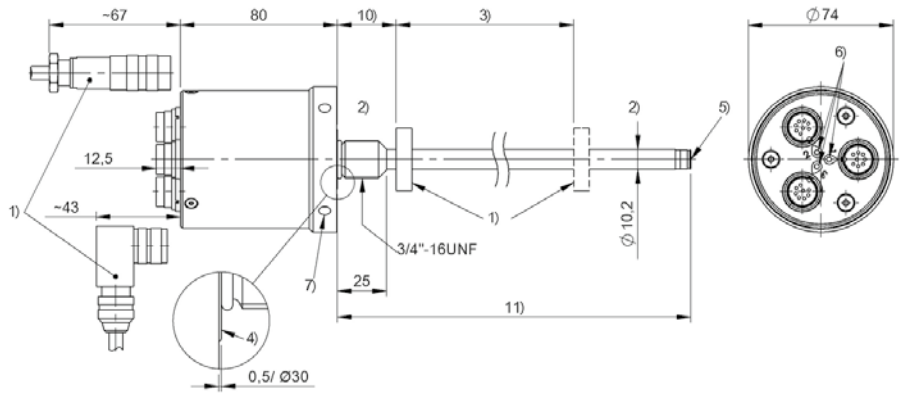
BTL7-E504-Mxxxx-TZ2-NEX-S32



1) not included in scope of delivery
2) Non-usable area
3) Nominal length = Measuring length
4) Mounting surface
5) Internal threads M4x4/6 deep
6) LED function indicator
7) Ø6.1 for hook wrench Ø74
10) Null point
11) Installation length

BTL7-C505-Mxxxx-TZ3-NEX-S32



1) not included in scope of delivery
2) Non-usable area
3) Nominal length = Measuring length
4) Mounting surface
5) Internal threads M4x4/6 deep
6) LED function indicator
7) Ø6.1 for hook wrench Ø74
10) Null point
11) Installation length

BALLUFF

Precise deviation measurement for numerous industries

INCLINATION SENSORS

Many applications require precise position control as well as continuous guiding and monitoring of rotary movements. Inclination sensors from Balluff measure the deviation from horizontal or vertical axes up to 360°. The sensors are available with two different measuring principles, making them ideal for numerous industries and applications.

The most important benefits

- Contactless and absolute
- Capacitive measuring principle and MEMS
- Direct inclination measurement without costly special constructions
- Interfaces: 4…20 mA, 0…10 V and Modbus
- Appropriate for use in harsh conditions with high protection class IP67
- Measuring range up to 360°
- Simple mounting and integration in your facility
- For use in many industries: factory automation, energy, hydraulics, packaging, plastics, rubber, tires, life sciences

Compact and convenient measurement and monitoring

PRESSURE SENSORS

Our high-end pressure transmitters are optimally suited for pressure monitoring and pressure measurement of gaseous, fluid and viscous media. With their rotatable housing and the simple, VDMA-compliant programming, they can be flexibly mounted as well as conveniently serviced. The bright LED display always gives you an overview of the current system pressure.

The most important benefits

- Compact and rugged as a transmitter
- Convenient to operate, with a very legible display
- Pressure range –1…600 bar
- Process connection G½", G½", R¼", NPT¼"
- Flush with the front surface in G½" and Tri-Clamp 1½"
- Output 4…20 mA, 0...10 V, switching points (NPN/PNP) and IO-Link
- Fluid temperature –40…+125 °C
- Enclosure rating IP67
- UL approval
- Compact with M12 connection
- Stainless steel or PVDF process connection
- Dual rotation – easily installed
- Pressure values directly via IO-Link

Reliably detect and measure hot objects

TEMPERATURE SENSORS

With temperature sensors, you can measure and monitor temperatures by contact or contactlessly in a wide range of applications.

The most important benefits

- Rugged M30 stainless steel housing with IP67 protection
- Temperature range 250…1250 °C
- Numerous functions and settings using the IO-Link interface

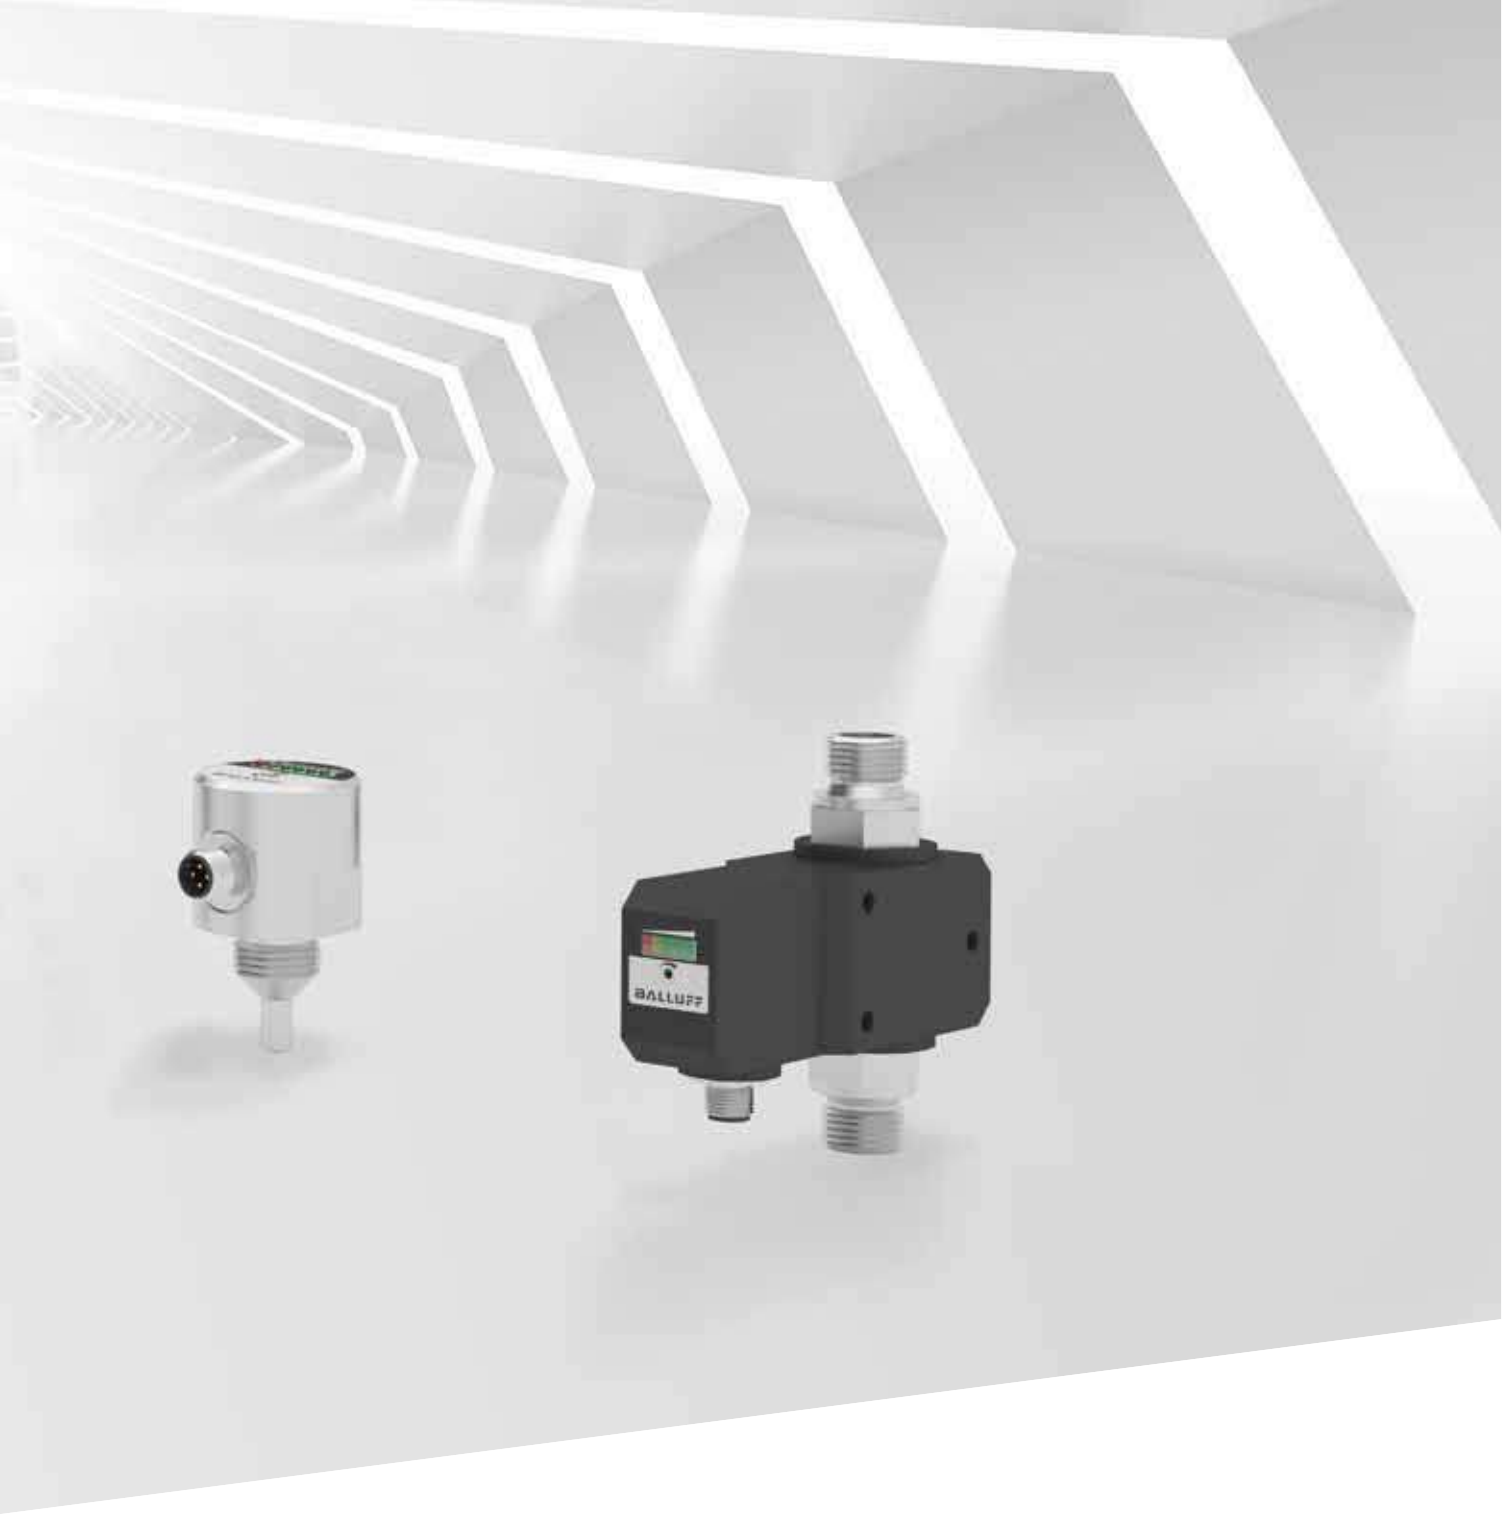
FLOW SENSORS



Flow sensors let you measure and monitor the flow of process media in a wide range of applications. For example the lubricant flow or reliable circulation of cooling water. Now you can detect a pump failure early and prevent an unplanned machine or even system stop.

This is how flow sensors as well as pressure or temperature sensors contribute to process security.

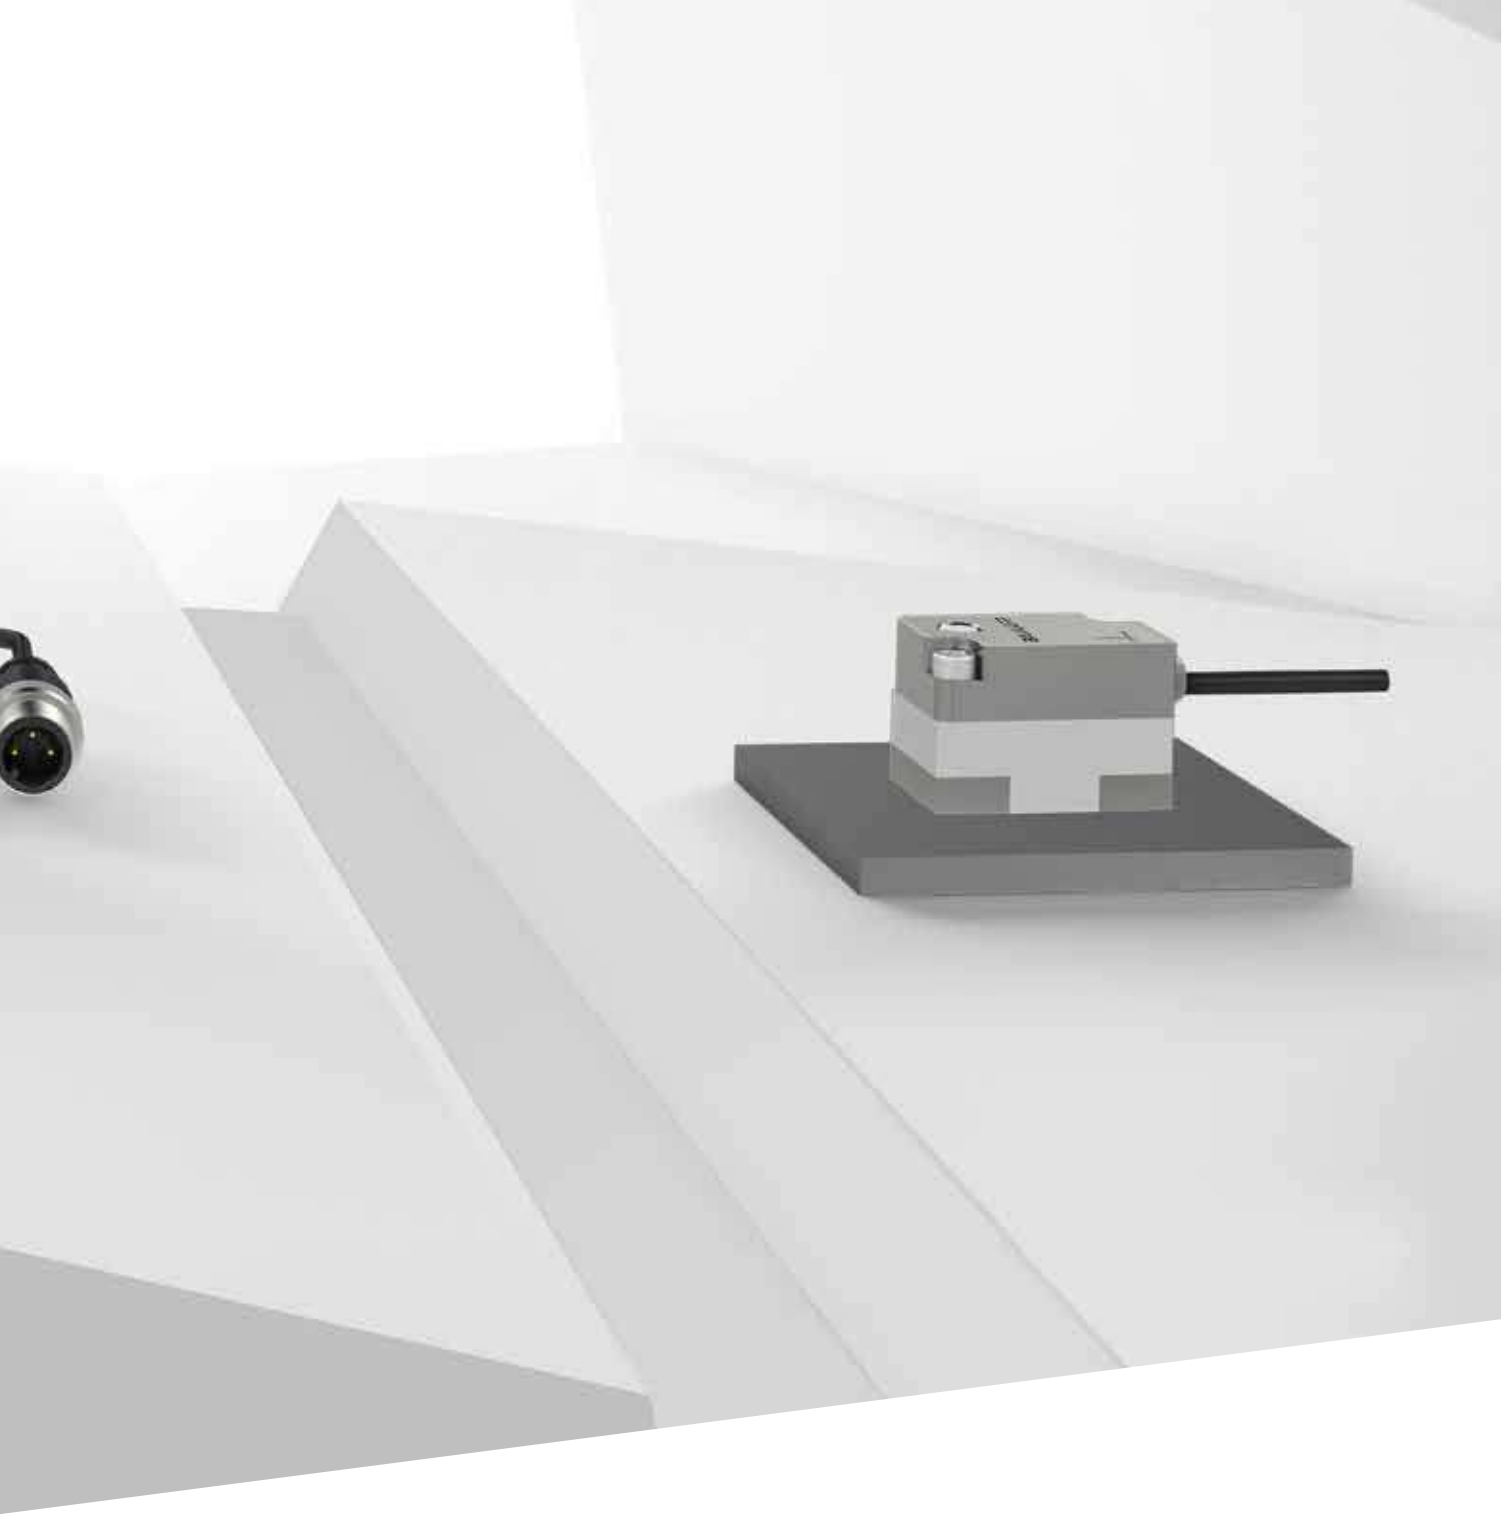
CONDITION MONITORING SENSORS



BCM multi-functional condition monitoring sensors support the efficient and fault-free operation of any equipment and significantly enhance the efficiency of the overall plant. Unplanned stoppages and interruptions in the production process can now be prevented because these intelligent sensors provide you with condition information which you can use for planning predictive maintenance and repair and automating cost-intensive manual inspections. Being able to detect, process and interpret the condition of machines and equipment as well as their associated components is also essential for the Industrial Internet of Things.

1) Membrane, 2) LED orange, 3) LED green, 4) Cable length

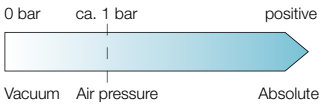
BCM0002

Absolute

Characteristic of a magnetic coded measuring system whereby the measured value for the current position is available as soon as the device is powered up. Each position, e.g. a measurement section, is assigned an absolute, coded digital signal or an analog value. A reference run is not required.

Absolute pressure

Pressure with respect to zero pressure (vacuum). The value range of absolute pressure is always positive.

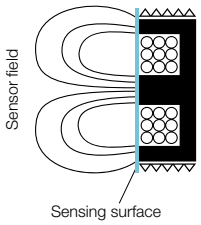


Distance sensor with analog output

A sensor which generates a continuously varying output signal which is a function of the distance between the sensing surface and the actuation element.

Sensing surface

Actively measuring area and thereby the externally sensitive electrode/plate of the electrode system. It is generally somewhat smaller than the surface of the cover.

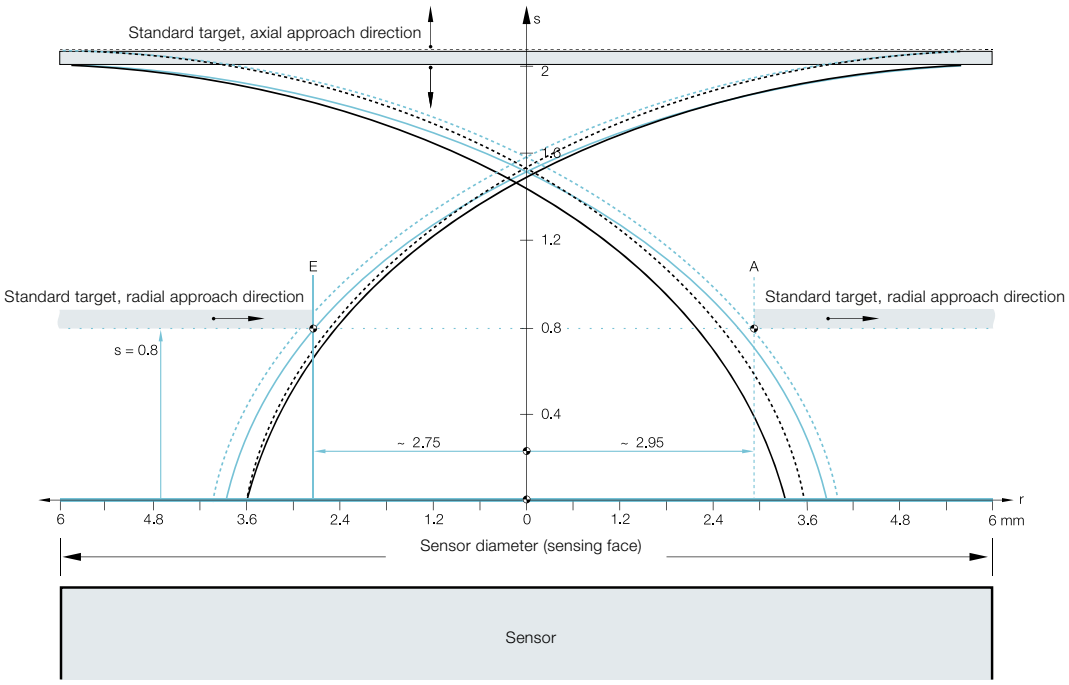


Analog sensor

A sensor whose output signal is represented as a continuously varying analog value (e.g. 0...10 V, 4...20 mA).

Approach direction

Direction of an object as it enters the detection range/active range of a sensor.



Response time

The time between the change in pressure and the change in the switching output state.

Non-equivalence

Switching function whereby a sensor provides two signals at the same time when it switches, the normally open (NO) and the normally closed (NC) function. When an object is detected, both outputs are switched.

Working range S_a

The travel distance available for position detection.

Resolution (sensor technology)

The minimum "movement increment" in a measuring system which can trigger a change in the output signal (for distance measuring systems) or how finely incremented an analog variable can be represented in binary (for network modules).

Output signal

Signal that a sensor sends to the controlling unit. Both sensor versions determine the type of output signal. Switching sensors work with a digital signal (switching state 0 or 1), measuring sensors with an analog signal or a digital count value.

Output current I_e

The maximum current with which the output of the sensor may be loaded in continuous operation. Also referred to as operating current.

Output current max.

The maximum current with which the switching output of the sensor may be loaded in continuous operation.

Output resistance

Resistance (Ra) at the output of a circuit or component. The output resistance is generally a frequency-dependent, complex resistance with amount and phase and is referred to as output resistance.

Turn-off time

The time a sensor requires to respond when the target leaves the detection range at a factor of 0.5 of the radiant power.

Limited rated short-circuit current

Value of the unaffected short circuit current which the short circuit protected circuit can withstand during the entire turn-off time (duration of current flow) of the device under specified conditions. This current is prescribed in the standard in order to test the short-circuit protection of sensors.

Effective distance s_e

Point in the middle of a sensor's range of linearity s_l. Serves as a reference point for further specifications.

Rated operating voltage

The maximum voltage at which the sensor can be used in normal use.
Indicated by U_e. DC switches: U_e = 24 V DC; AC and AC/DC switches: U_e = 110 V AC.

Rated operating current

The permissible output current which flows through the load R_L.

Rated supply frequency

Frequency of the operating voltage when using alternating current

Rated isolation voltage

The voltage to which the insulation checks and the air and creepage distances refer. For sensors, the highest rated operating voltage is considered the rated insulation voltage.

Rated operating distance S_n

Switching distance not taking into account manufacturing tolerances, sample deviations and external effects such as temperature and voltage.

Time delay before availability

Duration between the application of power and the availability of a sensor.

Burst pressure

Pressure in the medium which the pressure sensor must withstand without being destroyed. If this pressure is exceeded, it is certain that pressurized components will burst, the device will begin to leak or be mechanically destroyed.

Operating voltage U_B

Voltage range (V) n which flawless functioning of the sensor is assured.
It includes all voltage tolerances and ripple.

Operating current

The maximum current with which the output of the sensor may be loaded in continuous operation. Also referred to as output current.

Blind zone

Area between the active surface and minimum switching distance within which a target cannot be detected.

Flush installation

Installation type in which a proximity switch can be embedded in metal up to its active surface.

Distance sensor with analog output

A sensor which generates a continuously varying output signal which is a function of the distance between the sensing surface and the target point. It generates a linear output signal within a certain range (measuring range).

Flameproof encapsulation "d“ designation "Ex d“

Feature of parts which could ignite a potentially explosive atmosphere and which must therefore be housed in a special enclosure. This housing must withstand the pressure inside the housing if there is an explosion from an explosive mixture and must prevent transfer of the explosion to the explosive atmosphere surrounding the housing.

Pressure peak

An abrupt pressure load which can be magnitudes greater than the normal pressure. Pressure peaks are caused for example by rapidly closing valves. The pressure rises in a very short time to high values. Pressure peaks can cause lasting damage to the sealing system and the measuring cell of the pressure sensor as well as pressure carrying lines and other system components.

On delay

Time a sensor requires to be ready when an object enters the capture range.

Electromagnetic Compatibility (EMC)

The property of a sensor to neither interfere with or be interfered by undesired electrical or electromagnetic effects or by other devices.

Receiver lobe

Area in front of the receiver of a photoelectric sensor in which it can recognize the object.

Detection range

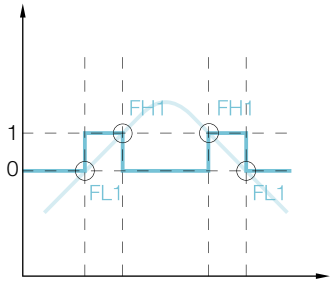
Range in which the switching distance of a sensor from the standard target can be adjusted.

Ex-Zone

Areas with high requirements for safety and reliability of sensors, since they may cause explosions. These areas are divided up by zones, each based on the frequency and duration of the occurrence of hazardous explosive atmosphere.

Window, adjustable

The output function is activated when the measured value falls between the preset switching and return point. Window function: The range between a defined lower pressure limit and a defined upper limit is known as a window. A switching operation is initiated as soon as the upper or lower limit of the programmed pressure range is exceeded.



Food and Drug Administration

Regulatory body for the US American food and drug industry. It certifies devices, materials and equipment in these sectors. Product designations of this kind make your system eligible for FDA approval.

Clear zone (sensor technology)

Installation area in which no material is permitted which could affect the characteristic values.

Full Scale (FS, end value)

Maximum measuring variable to which a device is adjusted, e.g. 20 mA.

Full Scale Output (FSO)

Difference between the upper and lower limit of the output. Example: A pressure sensor with a measuring range of 0...6 bar and a corresponding output signal of 4…20 mA has an FSO of 16 mA.

Magnetic coded function principle

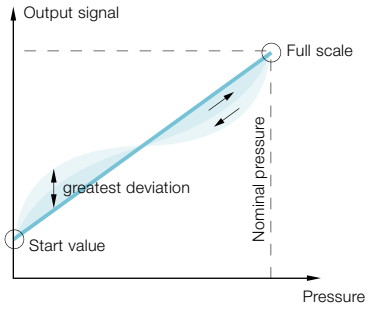
Technical procedure for determining the position using magnetic coding. A tape or disk with alternately polarized magnetic coding is read by a suitable read head passing over the tape. From the location of the read head from the individual magnetic codes the position information can be obtained.

Magnetostrictive function principle

Technical procedure for determining the position of a magnetic target by means of a torsional wave. The interaction of a moving magnetic target with an electrically stimulated magnetostrictive waveguide results in a torsional wave which propagates on the waveguide at a known velocity. By measuring the time until the torsional wave passes through a receiver coil the position of the target is determined.

Accuracy

Indicates how much the actual characteristic can deviate from the ideal characteristic (according to IEC 60770 non-linearity, hysteresis and repeatability). Accuracy specifications represent a percentage value of the measurement range (FSO) and never include dimensions. Nominal pressure 50 bar, output 4...20 mA, accuracy 0.5 % results in a maximum deviation of 0.08 mA (equivalent to a pressure value of 0.25 bar).

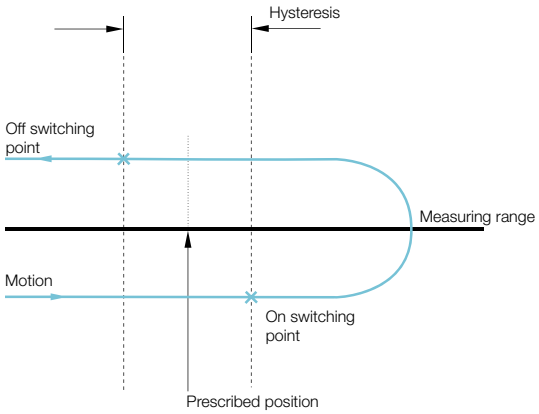


Assured switching distance S_a

Switching distance within which assured operation of the sensor at a specified voltage and temperature range is given ($0 \leq s_a \leq 0.81\ s_n$).

Hysteresis

Signal difference resulting for measurement sensors when a mechanically prescribed position is approached from one side, then crosses this point and afterwards approaches this same position from the other direction. Position difference between switching point (object approaches) and switch-back point (object travels away) for switching sensors.



Incremental

Characteristic of a measuring system whereby after the system is switched on, the current measured value is not available immediately. A reference run to a defined point, a reference point, is necessary in order to obtain a position value. The position value is calculated by adding or subtracting individual, equal increments from the reference point.

Characteristic curve

Dependency of the output signal on the input signal. The greater the effect of the input signal on the output signal, the more sensitive the measuring device is.
The sensitivity of a measuring device is indicated by the slope of the curve.

Minimum operating current

Minimum current (mA) required when energizing the output to maintain operation.

Short-circuit rating

Characteristic of components or assemblies which indicates the short-circuit current which the component or assembly can withstand.

Short-circuit protection

Protective device for overload and short-circuit. Present in all our DC sensors. In the event of overload or short-circuit at the output, the output transistor is automatically switched off. As soon as the malfunction has been corrected, the output stage is reset to normal functioning.

Short-term current carrying capacity I_k

For an AC device the short-term permissible current I_k $(_{eff})$ during a specified turn-on duration t_k (ms) and repetition rate f (Hz).

No-load current

The maximum internal current consumption with no load connected to the switching output (in general at $U_{B\ max.}$ and actuated).

Cable break protection

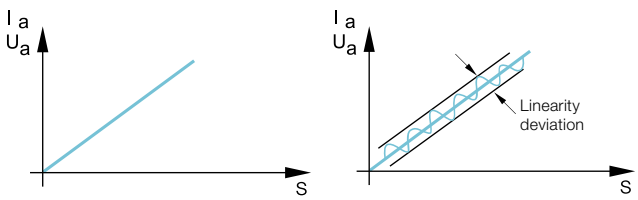
Characteristic of 3-wire switches which prevent malfunction when there is a cable break.
A built-in diode prevents the current from flowing via the output line A.

Reading distance (sensor technology)

The permissible working distance between sensor head and tape.

Non-linearity

Maximum deviation from the straight line that connects the zero point of the measuring range to the end point or full extension. There is a linear relationship between the position or path to be measured and the output signal for a voltage, current or digitized output information. This feature may be restricted to a defined linearity range.



Linear function

Linearity deviation of a linear function

Linearity range

Working range in which the sensor has defined linearity.

Linearity error

Maximum deviation from the straight line that connects the zero point of the measuring range to the end point or full extension. There is a linear relationship between the position or path to be measured and the output signal for a voltage, current or digitized output information. This feature may be restricted to a defined linearity range.

Magnetic function principle

Sensor principle based on detection of a magnetic field or its change. The sensitivity to the magnetic field can be set on the sensor.

Measurement speed

Speed with which changes to the active surface of a sensor are registered, processed and outputted. Up to the specified measuring speed the distance to a linear moving object can be reliably detected. The direction of movement of the object is parallel to the sensing face of the sensor.

Measuring length

Usable travel distance, i.e. the available distance/length measuring range of a measuring system

Sampling rate

The frequency at which the output distance/travel information is updated. It can be the same as the number of measurements per second. A high measurement rate for rapidly changing positions is important if a process is time-critical.

Nominal pressure

The maximum design pressure.

Rated operating distance S_n

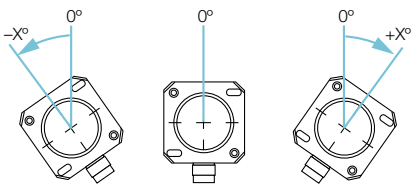
Maximum achievable switching distance from the standard target under device specification (generally with s_n as shipped from the factory).

Unusable area

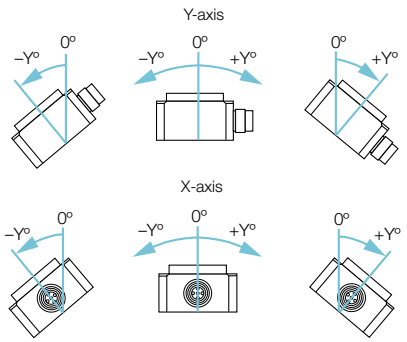
Area in which undesirable reflections are attenuated. This area is always outside of the measuring range. Depending on the transducer model, either an erroneous output signal or an error signal will be output if the encoder is allowed to travel into this zone, which must not be considered valid information.

Inclination axis

1-axis (vertical installation)



2-axis (horizontal installation)



Normally closed (NC)

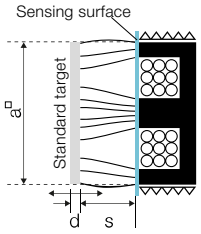
Also "Normally closed" – sensor principle/output function in which the switching output is inactive (not energized) when the sensor detects an object. The switching output is energized when no object is present.

Normally open (NO)

Also "Normally open" – sensor principle/output function in which the switching output is active (energized) when the sensor detects an object. The switching output is not energized when no object is present. This principle is the most commonly used in automation technology.

Standard target

A square plate made of Fe 360 (ISO 630), used to define sensing distances per EN 60947-5-2. Thickness is 1 mm; the side length "a" corresponds to the diameter of the inscribed circle of the active surface or 3 s_n, if the value is larger than the named diameter.



NPN output

An output type such that the load on the switching output is connected to the supply voltage (+ U_S as a reference point. When a threshold value is reached the ground (GND) is switched and the current can flow from + U_B through the load across the transistor to GND. The output switches to – U_B. Also referred to as a sinking output. This type of output is common in Asia.

Zero point

Position of the lowest value of the measuring range. The zero point can be custom set for some transducer models. The zero point must lie within the measuring range.

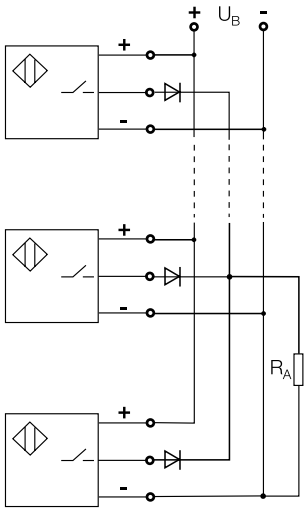
Usable operating distance

The permissible operating distance is the permitted switching distance within fixed voltage and temperature limits (0.81 $s_n \leq s_u \leq 1.21\ s_n$).

Parallel circuit

Electrical circuit type in which all the switching elements and their same named poles are connected in common to each other, so that multiple current paths result.

3-wire DC-switch



2-wire DC-switch

Parallel wiring of 2-wire-sensors is not recommended, since missed pulses can be caused by the ready delay as the oscillator begins to oscillate.

PNP output

An output type such that the load is connected on the switching output to GND as a reference point. When a threshold value is reached the supply voltage (+ U_B) is switched and the current can flow from + U_B through the load across the transistor to GND. The output switches to + U_B . Also referred to as a sourcing output. This type of output is common in Europe and North America.

Response time

The time which a sensor requires in order to reliably and steadily change the output signal. The specified time, which was determined at the maximum measuring speed, includes both the electrical response time of the sensor and the time for the mechanical change of the damping state.

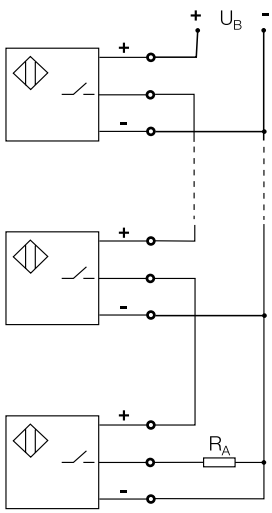
Effective operating distance S_r

The switching distance of a single proximity switch measured under specified conditions, e.g. flush mountable, rated operating voltage U_e, temperature T_a.

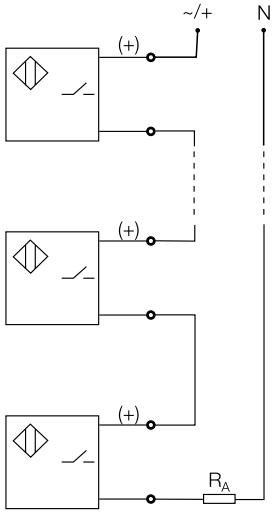
Series connection

Electrical circuit type in which the components are connected to each other in a string so that they form a single current path.

3-wire DC-switch

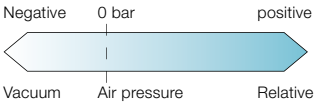


2-wire DC-switch (AC/DC)



Relative pressure

The pressure as a ratio to atmospheric air pressure (ambient pressure).
Measuring pressures greater than air pressure always produces positive values. Pressures lower than air pressure produce negative values.



Repeatability

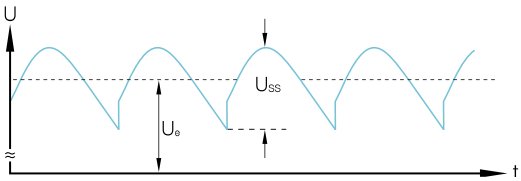
Measurement deviation when approaching a certain position from different directions. Reproducibility is the sum of the hysteresis and the resolution.

Off-state current

The current which flows in the load circuit when a sensor is not conducting (open).

Ripple

The maximum permissible AC voltage (peak-to-peak of U_e) which may be superimposed on the operating voltage U_S without affecting the function of the sensor.



Ue = Rated operating voltage
Uss = Oscillation width

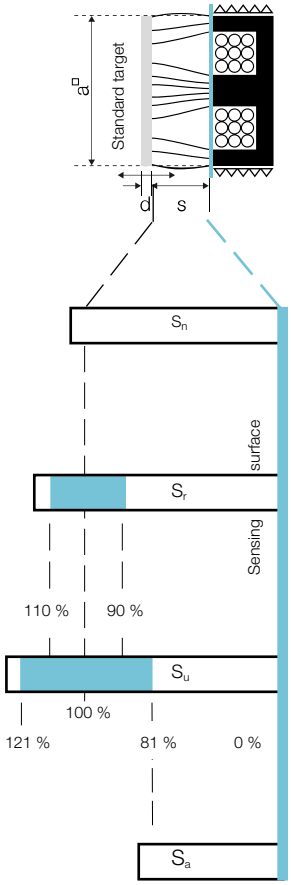
$$\text{Ripple } \sigma = \frac{U_{pp}}{U_e} \times 100\ [\%]$$

Sound deflection

Direction change/diversion of the sound beam which is caused by a smooth mechanical reflective surface. Used for example in tight mounting conditions or for protecting against contamination from the environment.

Switching distance

The distance between the standard target and the sensing surface of the sensor at which a signal change is triggered as per EN 60947-5-2. For a normally open switch this means from OFF to ON and for normally closed from ON to OFF.



Switching output

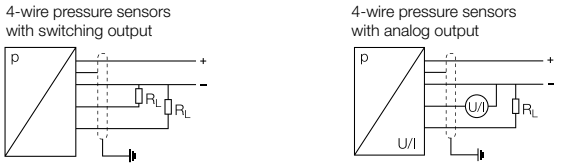
Electrical connection of a sensor by which the state (active/inactive) is indicated.

Switching sensor

A sensor with binary output signal which changes when a threshold is exceeded or under-shot (1 or 0, high/low, active/inactive). This indicates the switching status of the sensor.

Switching function

Output characteristic of a sensor. For example pressure sensors use the switching function to switch an output on or off depending on the pressure value and the set switching threshold. The switching threshold can be configured for example over IO-Link.



Sensor

"Sensory organ" of a machine which transforms the physical variable of an object to be measured into an electrical variable.

Voltage drop U_d

The maximum voltage loss of the switching final stage between switching output and $+U_B$ (PNP) or $–U_B$ (NPN) at the maximum specified load current.

Slope

The slope is a measure of the sensitivity of the sensor with respect to a distance change. This physical relationship can be calculated for travel sensors as follows:

$$\text{Slope S [V/mm]} = \frac{U_a \text{ max} - U_a \text{ min}}{s_a \text{ max} - s_a \text{ min}}$$

or

$$\text{Slope S [mA/mm]} = \frac{I_a \text{ max} - I_a \text{ min}}{s_a \text{ max} - s_a \text{ min}}$$

SYNC mode

Procedure for determining and transmitting the absolute positioning information of the position measurement system, e.g. an axis controller or regulating controller. This takes place synchronously with the processing electronics. It ensures that the time offset for the measurement is minimal. SYNC mode is meaningful for sensors which operate synchronously.

System accuracy

Deviation of the system measured value from the actual value for the object. It includes the position deviations within any given meter of the measuring range for linear measurements or one rotation for rotary measurements. Indicates the linearity class of a distance measuring system. The accuracy of the sensor head depends largely on mechanical manufacturing tolerances and component tolerances; the accuracy of the tape is determined by the material quality and the magnetization grade.

Teach-in

Method for setting sensors by pressing a button. No potentiometers or slide switches are used. Because there are defined setting increments, the advantage is that the sensor cannot be set in an unreliable range. The microcontroller also assumes control of the contamination indicator and the contamination output.

Temperature coefficient

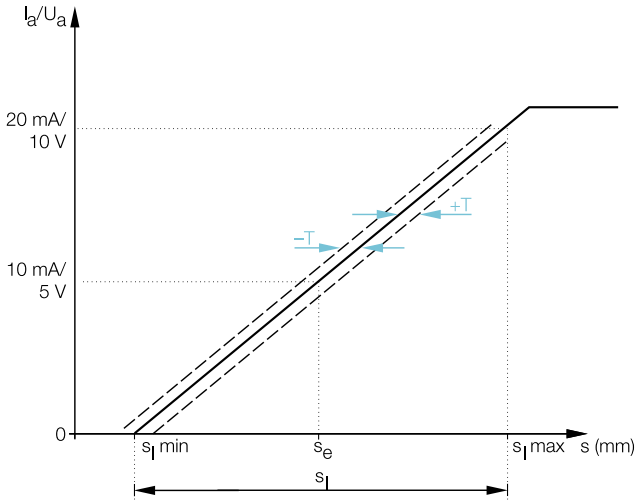
Describes the deviation of the sensor output signal under the effect of a temperature change, and thus represents a quality criterion for the sensor also.

Temperature drift

The temperature drift is the shift a point experiences on the actual output curve at different temperatures. The temperature drift is described by the temperature coefficient.

Tolerance T

A variable which defines the manufacturing tolerance band of the output curve, thereby determining the maximum sample deviation.



Ultrasonic function principle

Detection of objects using sound waves which are reflected directly back from a target.

Ambient temperature T_a

The maximum permissible temperature range at which a sensor may be operated while ensuring reliable functioning of the sensor.

Reverse polarity protection

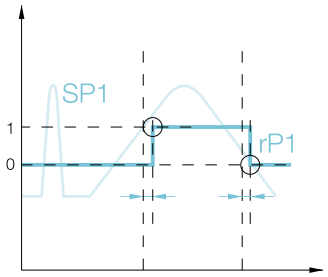
Also called polarity reversal protection. This sensor technology protects against reversal of the supply voltage (plus and minus) and reversal of the connection wires (brown and blue).

Contamination

Dirt and dust particles which collect on a sensor and reduce the range of photoelectric sensors and fiber objects compared with pure air. Deposits on the lens reduce its light transmission. The light is absorbed and scattered in the beam path. An oil-free source of compressed air can be used to prevent the effects of dirt and contamination due to impure air.

Delay time

Time until a sensor function is ready. This time function can be set. With a pressure sensor for example rapid pressure fluctuations can be reliably filtered out. When there is a pressure change in the medium the changed state is not compared with the set switching threshold until after the delay time has expired. If the switching event no longer exists by the time the delay has elapsed, the switching output does not change.



Displacement sensors with analog output

Displacement sensors with analog output are sensors that generate a continually varying output signal that depends on the distance between its sensing surface and the location of the position encoder relative to the sensor.

Repeat accuracy

Variance in the output values when approaching a mechanically prescribed position repeatedly from the same direction.

Ignition protection category "n" Designation "Ex n"

Feature of devices which are intended for use in areas where an explosive atmosphere is not expected. Even if the atmosphere were to become explosive, in all probability it would be infrequent and only for a short period of time. A manufacturer's declaration confirms that the product satisfies requirements for the use of electrical equipment in potentially explosive areas according to EN 60079-15. This designation combines multiple methods of ignition protection.

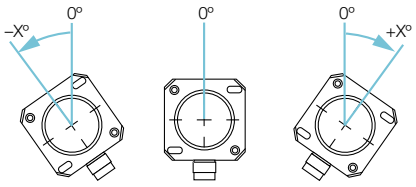
Reverse protected

The sensor electronics is protected against any possible reversal combination of all the leads.

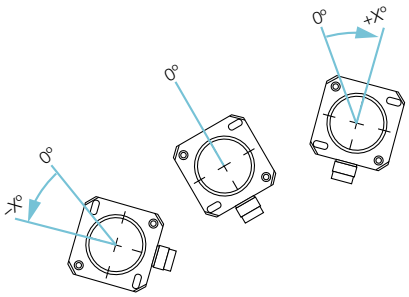
Centering function with MEMS-based inclination sensors

1- and 2-axis: factory calibrated – can be individually centered
Available are 1- and 2-axis versions which are factory calibrated to the perfect vertical or horizontal. The maximum deviation for each is 0.2°. If the current installation position deviates from these perfect vertical and horizontal alignments, the sensor can be centered. The single-axis version can be centered in a vertical position over 360° (see illustrations), whereas the dual axis version can only be set in a range of ±5° from the horizontal.

Starting position – working range (±x°) as factory set



New position – working range (±x°) after centering



Power Supplies

Reliable and efficient power supply

SWITCHING POWER SUPPLIES

Balluff offers high-performance power supplies to ensure that your systems run efficiently and without interference. Our power supplies for the control cabinet withstand overload and have especially long service life: up to 800,000 hours (91 years) to ensure the availability of your machines and equipment.

Our power supplies with the Heartbeat® function provide continuous function information about the internal device condition and indicate the current load situation and demand on the internal components. And the Lifetime display gives you warning for preventive maintenance. The diagnostics function can be applied anywhere in the system via IO-Link.

All the devices are available in several versions and output voltages. Heartbeat® versions for use directly in harsh environments are also available in IP67.

The most important benefits

- Complete line – everything from a single source
- Safety in case of short circuits and overloads in industrial environments
- Long service life for reliable operation
- High system availability of all equipment
- Comprehensive approval packages for global use

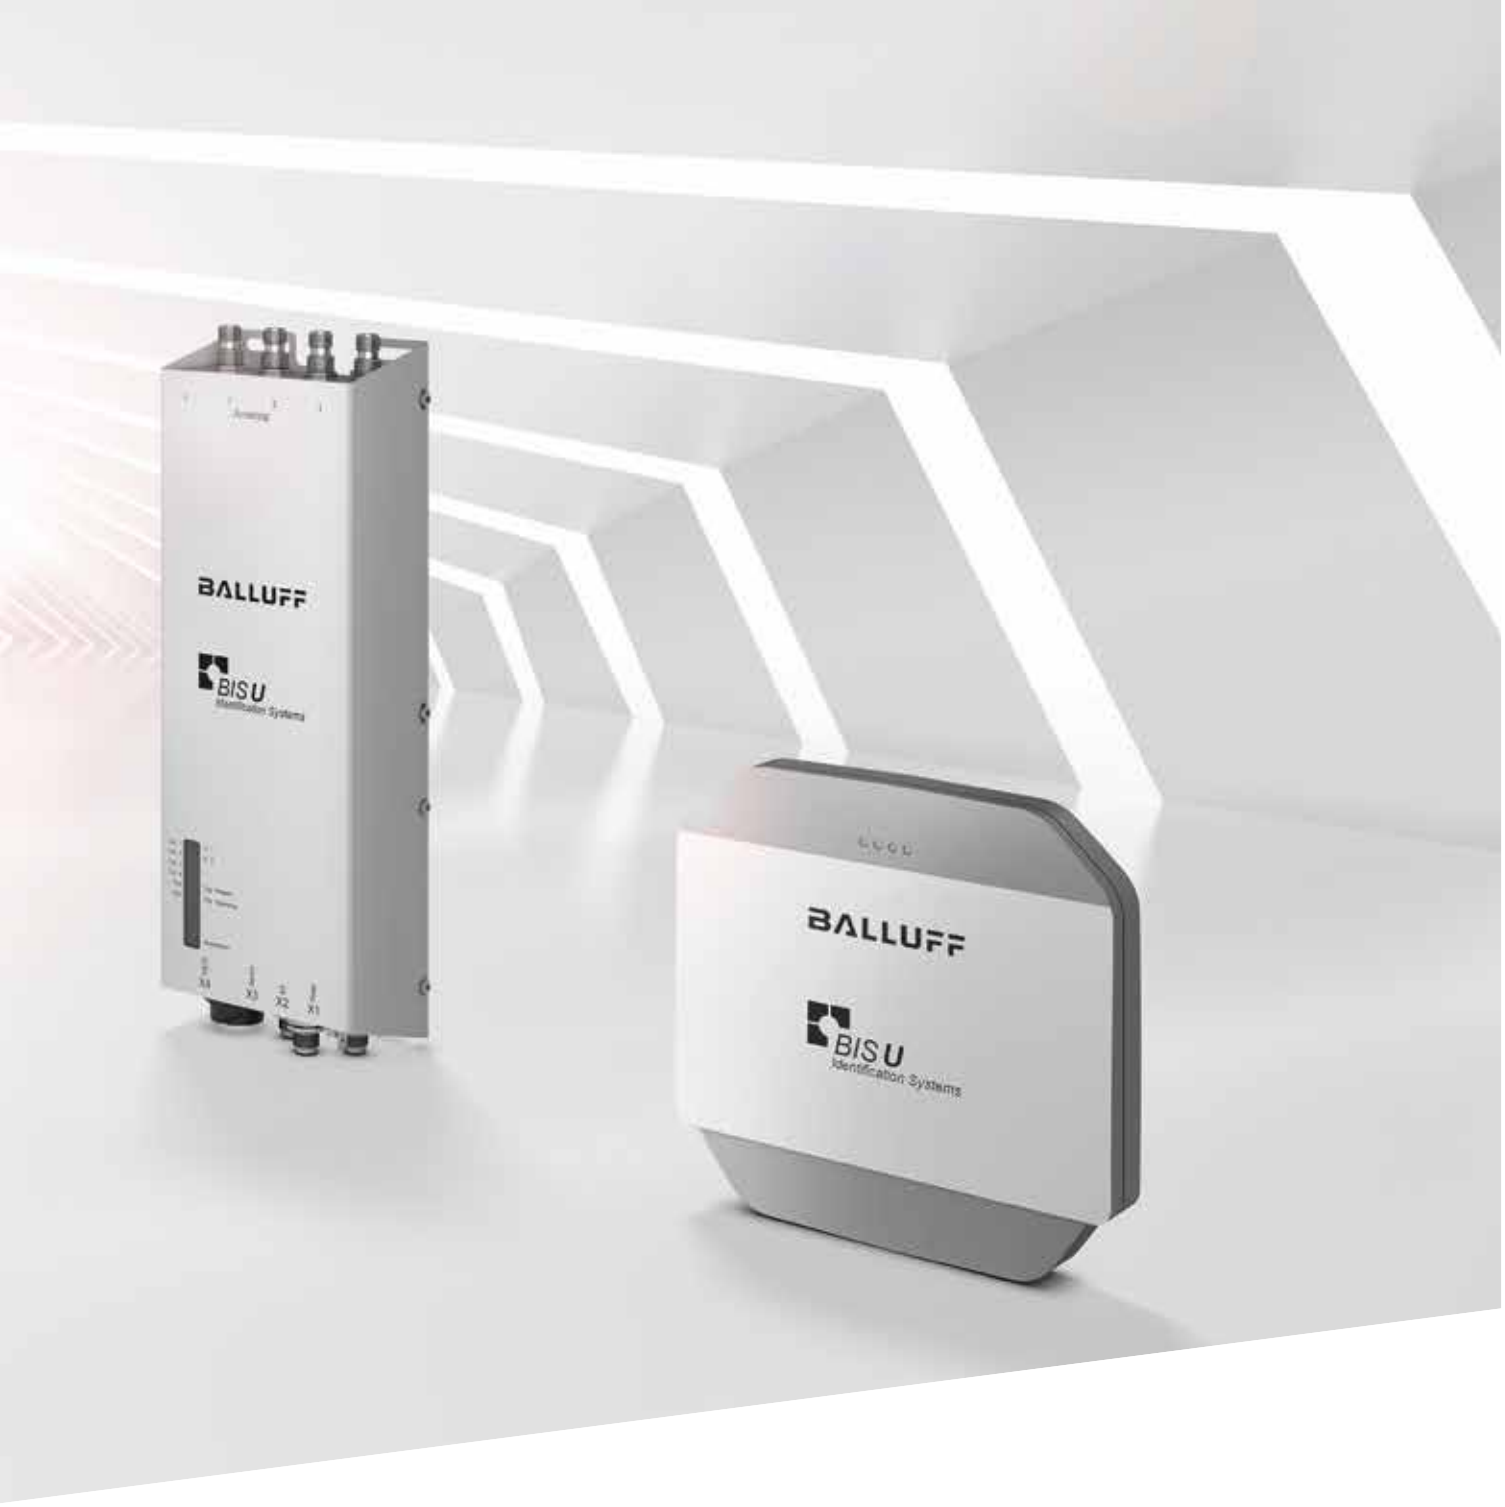
RFID

Continuous transmission security and data transparency

RFID SYSTEM UHF (860/960 MHZ) BIS U



The BIS U UHF systems from Balluff ensure data transparency and traceability of your automation processes. UHF is a standard technology for identification solutions covering all processes. They help to achieve fast detection of tag information and continuous transmission security. By querying decentrally stored product- and process-data, UHF is a central component of traceability applications. Our UHF BIS U systems provide permanent data transparency in your entire delivery chain.

Features

- Problem-free integration in applications via globally used standard interfaces
- Corresponds to the global standard ISO 18000-6C and EPC Gen2 Class1
- Flexible use due to a wide range of different combinations of data carriers and antennas
- Ranges up to 6 m and more
- Bulk capture for simultaneous scanning of many data carriers (tags)
- Suitable for attachment to traditional control systems via bus interfaces and higher level IT systems
- Complete tailored system solutions realizable
- Many accessories for integration into a variety of applications

High transmission speed for large volumes of data

RFID SYSTEM HF (13.56 MHZ) BIS M

The RFID system BIS M supports global ISO standards and scores with a high transmission speed for large volumes of data. Through various combination options of data carriers and read/write heads, the system can be used for a variety of applications. The system is ideal, for example, in close-range parts tracking or for applications in production control such as palletizing or recording data on the workpiece.

Features

- 4-pin standard wiring and IO-Link components
- In combination with passive data carriers of average ranges up to a max. of 400 mm
- Seamless integration in applications through global RFID standards ISO 15693 and ISO 14443A
- All bus systems commonly used on a global basis available
- Easy, fast commissioning
- Balluff high-speed components (up to eight times faster than ISO 15693)
- Customer-specific developments
- A variety of accessories for an easy integration available at all places of use

	BIS018Y BIS M-113-03/L	
Product Group	HF (13.56 MHz)	
Dimension	Ø 4.35 x 3.6 mm	
Antenna type	round	
UID serial number, read-only	8 Byte	
Memory type	EEPROM	
Supported data carrier types	DIN ISO 15693	
User data, read/write	112 Byte	
Storage temperature	-40...85 °C	
Storage temperature temporary	—	
Ambient temperature	-40...85 °C	
Housing material	Epoxy-resin/fiberglass PVC	
Protection degree	IPx8	
Installation	metal-free (clear zone) on metal flush in metal	
Approval/Conformity	CE

For processor units BIS V-6...	**BIS0197** BIS VM-349-401-S4
Product Group	HF (13.56 MHz)
Dimension	20 x 8 x 32 mm
Installation	metal-free (clear zone) on metal flush in metal
Antenna type	round
Supported data carrier types	DIN ISO 15693, DIN ISO 15693 (High Memory)
Connection	Male, 4-pin
Housing material	Zinc, die-cast
Ambient temperature	0...80 °C
Protection degree	IP67
Approval/Conformity	CE, FCC Part 15, IC RSS-210, UL Listed

For processor units BIS V-6...	**BIS0132** BIS VM-344-401-S4
Product Group	HF (13.56 MHz)
Dimension	Ø 30 x 70.5 mm
Installation	metal-free (clear zone)
Antenna type	round
Supported data carrier types	DIN ISO 15693, DIN ISO 15693 (High Memory)
Connection	Male, 4-pin
Housing material	Brass, nuts nickel plated brass, nuts brass with white bronze
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE, FCC Part 15, IC RSS-210, UL-FILE E227256, Vol.X1, BIS

For processor units BIS M-60...	**BIS0053** BIS M-300-001-S115
Product Group	HF (13.56 MHz)
Dimension	Ø 30 x 83 mm
Installation	metal-free (clear zone)
Antenna type	round
Supported data carrier types	DIN ISO 14443, DIN ISO 15693
Connection	Male, 8-pin
Housing material	Brass, nuts nickel plated brass
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE, FCC Part 15, IC RSS-210, UL-FILE E227256, Vol.X1, BIS

Interface	Profibus DP Slave galvanically isolated	
IO-Link-Master-Port	max. 500 mA	
Supported RFID technologies	LF 125 kHz (BIS VL), HF 13.56 MHz (BIS VM), UHF 860...960 MHz (BIS VU)	
Number of connectable R/W heads / antennas	4	
Operating voltage Ub	24 V DC LPS Class 2	
Housing material	Zinc, Die casting	
Ambient temperature	0...60 °C	
IP rating	IP65, with connector	
Approval/Conformity	CE, EAC, cULus, WEEE	
Connection	M12x1-Male, 5-pin, B-coded M12x1-Female, 5-pin, B-coded 7/8“-Male, 5-pin	
Productview	Page 212

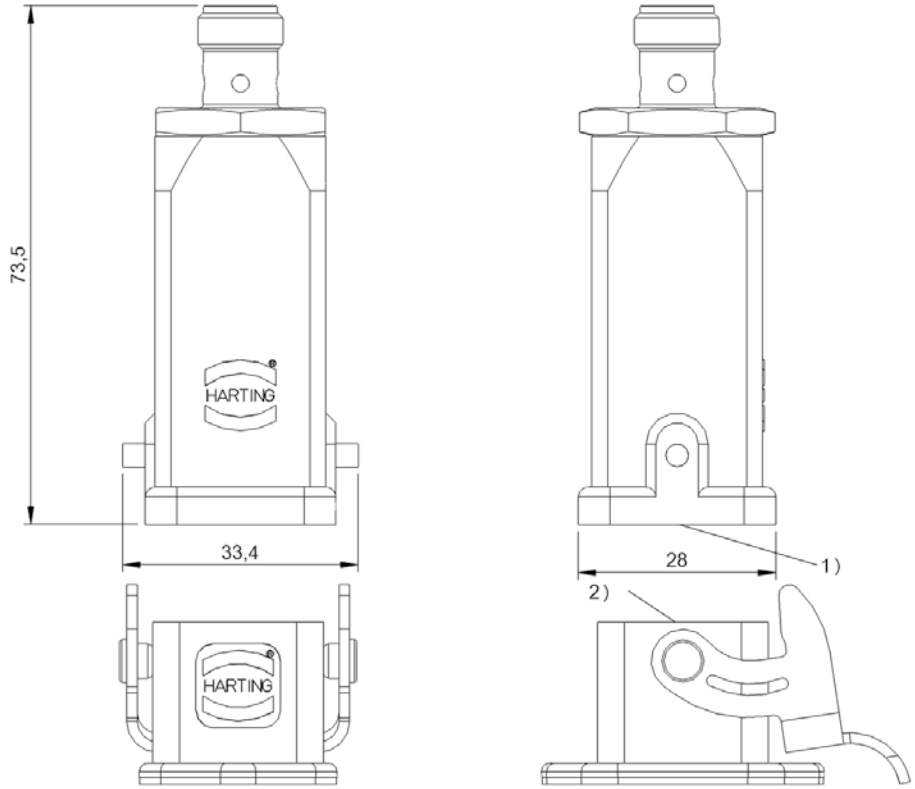
IO-Link, 10 bytes process data length	**BIS018E** BIS M-404-045-401-07-S4-SA1
Product Group	HF (13.56 MHz)
Dimension	28 x 60 x 33.4 mm
Installation	metal-free (clear zone) on metal flush in metal
Antenna type	round
Supported data carrier types	DIN ISO 15693, DIN ISO 15693 (High Memory)
Connection	Connector, M12x1 connector, 4-pin
Housing material	Die casting Brass nickel plated, nuts nickel plated brass
Interface	IO-Link 1.1
Operating voltage Ub	18...30 VDC Supports only LPS/Class 2
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE, FCC Part 15, IC RSS-210

Use with data carrier **BIS0180** only



1) Sensing surface, 2) Data carrier

IO-Link, 10 bytes process data length	**BIS00LH** BIS M-400-045-001-07-S4
Product Group	HF (13.56 MHz)
Dimension	Ø 30 x 83 mm
Installation	metal-free (clear zone)
Antenna type	round
Supported data carrier types	DIN ISO 14443, DIN ISO 15693
Connection	Connector, M12x1 connector, 4-pin
Housing material	Brass, nuts nickel plated brass
Interface	IO-Link 1.1
Operating voltage Ub	18...30 VDC Supports only LPS/Class 2
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE, UL-FILE E227256, Vol.X1, BIS, FCC, IC

Use with **IO-Link master** only

Appropriate data carrier

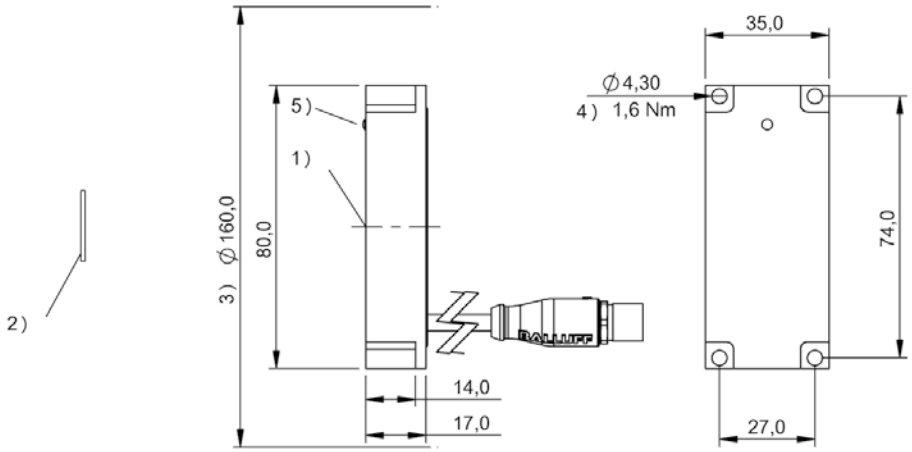
IO-Link, 10 bytes process data length	**BIS0155** BIS M-405-045-008-07-S4
Product Group	HF (13.56 MHz)
Dimension	35 x 17 x 80 mm
Installation	metal-free (clear zone)
Antenna type	round
Supported data carrier types	DIN ISO 14443, DIN ISO 15693
Connection	Connector, M12x1 connector, 4-pin, 0.30 m
Housing material	ABS
Interface	IO-Link 1.1
Operating voltage Ub	18...30 VDC Supports only LPS/Class 2
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE, UL-FILE E227256, Vol.X1, BIS

Use with **IO-Link master** only

Appropriate data carrier on request



1) Sensing surface, 2) Data carrier, 3) Clear zone, 4) Tightening torque, 5) LED Power

IO-Link, 10 bytes process data length	**BIS014J** BIS M-408-045-001-07-S4
Product Group	HF (13.56 MHz)
Dimension	40 x 15 x 105 mm
Installation	metal-free (clear zone)
Antenna type	round
Supported data carrier types	DIN ISO 14443, DIN ISO 15693
Connection	Connector, M12x1 connector, 4-pin
Housing material	Zinc, die-cast
Interface	IO-Link 1.1
Operating voltage Ub	18...30 VDC Supports only LPS/Class 2
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE, FCC Part 15, IC RSS-210

Use with **IO-Link master** only

IO-Link, 10 bytes process data length	**BIS00LM** BIS M-451-045-001-07-S4
Product Group	HF (13.56 MHz)
Dimension	80 x 40 x 84.5 mm
Installation	metal-free (clear zone)
Antenna type	Rod
Supported data carrier types	DIN ISO 14443, DIN ISO 15693
Connection	Connector, M12x1 connector, 4-pin
Housing material	PBT
Interface	IO-Link 1.1
Operating voltage Ub	18...30 VDC Supports only LPS/Class 2
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE, FCC Part 15, IC RSS-210, UL-FILE E227256, Vol.X1, BIS

Use with **IO-Link master** only

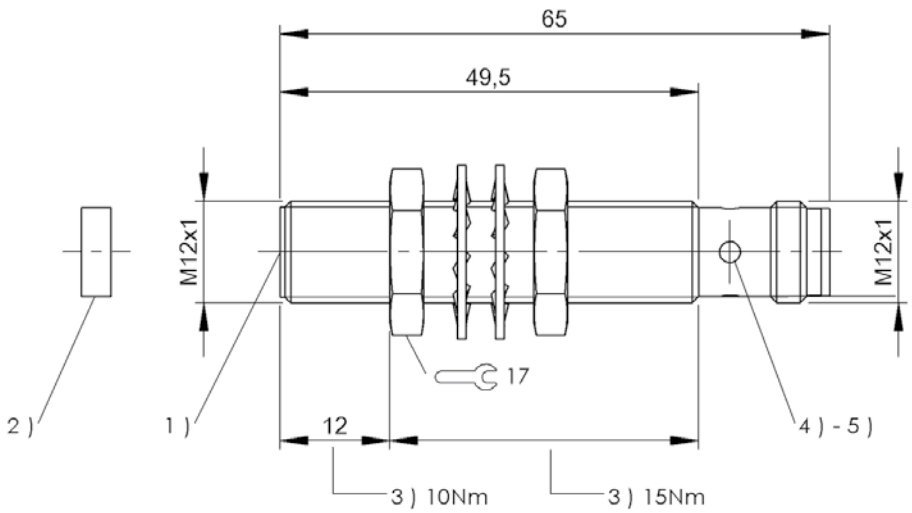
Installation note for data carriers



1) LED 4x on circumference, 2) Power/Status, 3) Tightening torque, 4) Sensing surface

IO-Link, 10 Byte process data length	**BIS01E7** BIS M-4A7-082-401-07-S4
Product Group	HF (13.56 MHz)
Antenna type	round
Supported data carrier types	DIN ISO 15693, DIN ISO 15693 (High Memory)
Process data IN	10 bytes
Process data OUT	10 bytes
IP rating	IP67
Approval/Conformity	CE, FCC Part 15, IC RSS-210, WEEE, EAC, cULus

Appropriate data carrier

Ethernet/IP	**BIS018C** BIS M-4006-034-002-ST4
Product Group	HF (13.56 MHz)
Dimension	80 x 35 x 119 mm
Installation	metal-free (clear zone) on metal flush in metal
Antenna type	Rod
Supported data carrier types	DIN ISO 15693, DIN ISO 15693 (High Memory)
Connection	2x M12x1-Female, 4-pole, D-coded M12x1-Male, 4-pole
Housing material	Zinc, die-cast
Interface	Ethernet/IP, Ethernet/IP 2 port Switch
Operating voltage Ub	24 V DC LPS Class 2
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE

Appropriate data carrier

RS232	**BIS00W2** BIS M-410-068-001-00-S115
Product Group	HF (13.56 MHz)
Dimension	40 x 24 x 56 mm
Installation	metal-free (clear zone)
Antenna type	round
Supported data carrier types	DIN ISO 14443, DIN ISO 15693
Connection	Connector, M12x1 connector, 8-pin
Housing material	PC, with PU potting
Interface	RS232
Operating voltage Ub	10...30 VDC
Ambient temperature	-20...50 °C
Protection degree	IP67
Approval/Conformity	CE, UL-FILE E227256, Vol.X1, BIS

Tool identification even at short ranges

RFID SYSTEM LF (70/455 KHZ) BIS C

Especially high-performing and flexible are the BIS C low-frequency RFID systems with reliable tool identification in coolant- and lubricant-heavy machining centers. Exact positioning is not always necessary: Many data carriers can be dynamically read and described in passing.

The LF RFID system (70/455 kHz) is also the first choice for tool identification over short ranges. Other areas of use are tool transport with conveyor systems, FTS and pallet transport systems as well as assembly technology and resource organization.

Features

- Great variety of data carriers and read/write heads for very diverse applications and difficult operating conditions
- Wear-free, maintenance-free and insensitive to dirt
- High noise immunity and assured data transfer with special checking software in the processor units
- All bus systems commonly used on a global basis available
- Memory capacity up to 8 kB

	BIS000T BIS C-121-04/L	
Product Group	LF (70/455 kHz)	
Dimension	Ø 9 x 4.5 mm	
Antenna type	round	
Memory type	EEPROM	
User data, read/write	511 Byte	
Storage temperature	-30...85 °C	
Storage temperature temporary	—	
Ambient temperature	0...70 °C	
Housing material	Epoxy-resin/fiberglass	
Protection degree	IP68	
Installation	metal-free (clear zone) on metal flush in metal	
Approval/Conformity	CE, UL-FILE E227256, Vol.X1, BIS

Cost-effective solution
for simple identification tasks

RFID-SYSTEM LF (125 KHZ) BIS L

Our low-frequency RFID systems BIS L are suitable for applications that involve only the identification and require less data processing. For example, often only a (read-only) code is required for tracing. The 125-kHz systems function reliably up to ranges of 100 mm and are relatively neutral with respect to materials such as water, textiles, wood and aluminum.

Features

- Data carrier memory limited to 192 bytes
- For sending smaller quantities of data
- Wide range of data carriers
- Unique ID with 5 bytes, read-only
- Read-only data carriers available (protection against manipulation)

	BIS0038 BIS L-101-05/L-R0	
Product Group	LF (125 kHz)	
Dimension	Ø 30 x 1.6 mm	
UID serial number, read-only	5 Byte	
User data, read/write	—	
Memory type	EEPROM	
Antenna type	round	
Installation	metal-free (clear zone) on metal flush in metal

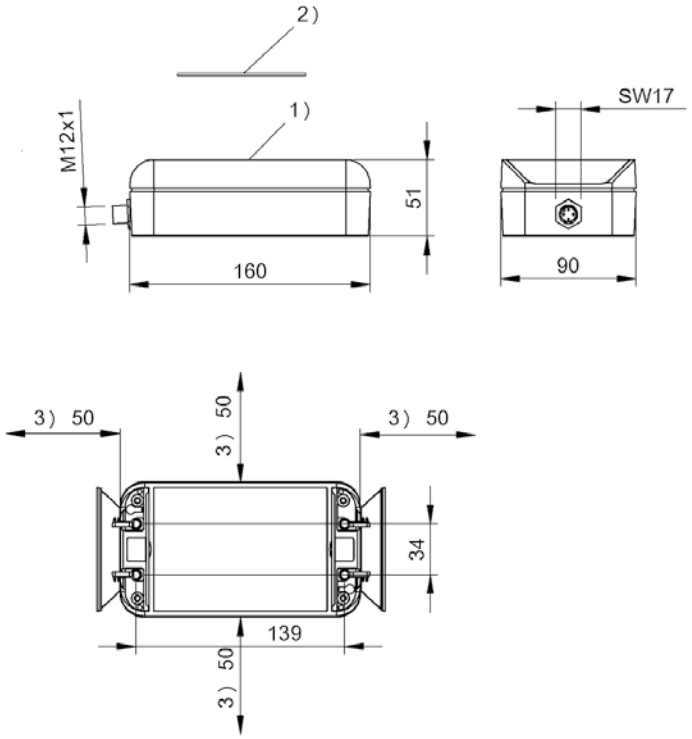
	BIS015U BIS VL-308-001-S4
Product Group	LF (125 kHz)
Dimension	90 x 51 x 160 mm
Installation	metal-free (clear zone)
Antenna type	round
Connection	M12x1 connector, 4-pin
Housing material	ABS
Interface	—
Operating voltage Ub	—
Storage temperature	-20...85 °C
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE

Suitable data carriers on request



1) Sensing surface, 2) Data carrier, 3) Clear zone

	BIS00UJ BIS VL-306-001-S4
Product Group	LF (125 kHz)
Dimension	Ø 12 x 42.5 mm
Installation	metal-free (clear zone)
Antenna type	round
Connection	M12x1-Male, 4-pole, 0.50 m, PU1
Housing material	Brass, interface aluminum
Interface	—
Operating voltage Ub	—
Storage temperature	-20...85 °C
Ambient temperature	0...70 °C
Protection degree	IP67
Approval/Conformity	CE

Appropriate data carrier

Safety

Safely transport signals

SAFE I/O MODULES

The safe I/O modules from Balluff combine safety and automation technology using IO-Link. They provide both sensor and actuator signals as well as safety-relevant information. The best part: all you need for the safety concept in your plant is an infrastructure for implementing industrial safety in your automation processes. The universal IO-Link interface makes integrating industrial safety technology easier than ever.

At Balluff the core of Safety over IO-Link is the Safety Hub with Profisafe for Profinet. Safety switches and sensors, opto-electronic protective devices or safety command devices are quick and easy to incorporate. All you need is standard M12 cables for connecting virtually any safe field device.

Safe communication with the controller level is via Profisafe for Profinet. Together with our safety components the result is an all-round safe system on which you can rely.

The most important benefits

- For safety applications up to PLe/SIL3
- Reduce IP addresses
- Standardized wiring concept with M12 cables, safe interlocking devices can be directly connected
- Simple device replacement
- Nearly any safety device can be connected

For high plant safety

SAFETY SWITCHES AND SAFETY SENSORS

Balluff safety switches and safety sensors are designed for many different application situations. Our safe switches and sensors protect both man and machine alike. The safety switches and sensors offer you a variety of operating principles:
Inductive for non-contact safe detection of position and end-of-travel of metallic objects, electromechanical such as REED or RFID-based for access or position security for both personal and machine protection.

You save time and money thanks to universal M12 standard cables. You also avoid wiring errors, gain a clear overview and ensure reliable monitoring.

The most important benefits

- Safety switches and sensors for a variety of applications
- Rugged housing versions with LED function indicator
- Suitable for safety applications up to PLe/SIL3
- Savings of time and money plus prevention of errors thanks to standardized M12 connection technology
- Reduced installation expense and space requirements
- Also suitable for heavy protective equipment
- Manipulation-resistant
- Insensitive to vibration and imprecise door guides

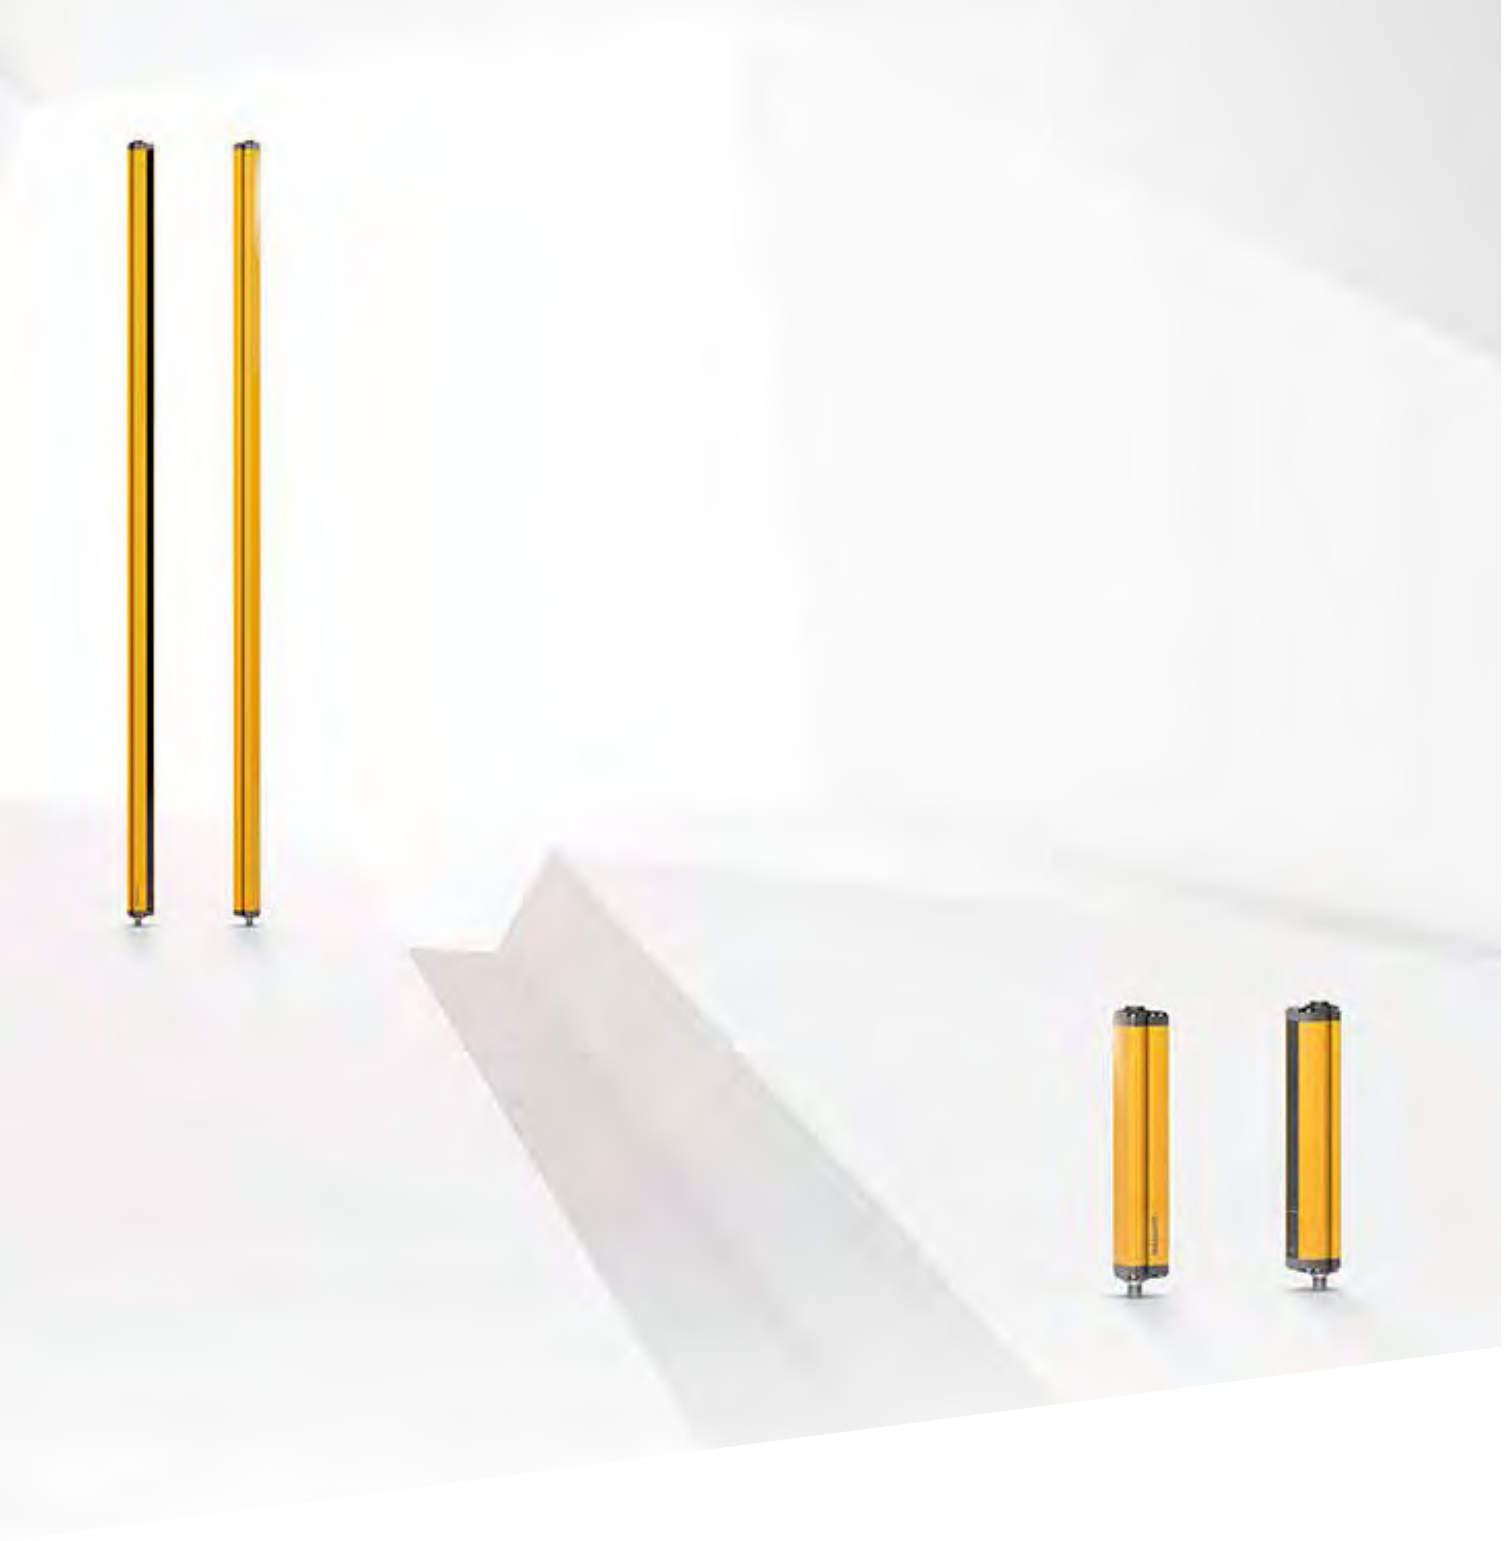
Safe personal protection for interaction between man and machine

OPTO-ELECTRONIC PROTECTIVE DEVICES



Flexible production places high demands on safety when man and machine work so closely together.
This interplay must not ever compromise the safety of employees. Opto-electronic protective devices such as light curtains from Balluff provide safe solutions that also enable great flexibility. Another benefit to you: by using light curtains that consist of multiple parallel light beams, you save space since they can replace cumbersome guard fence constructions or assemblies of multiple through-beam sensors.

The most important benefits

- Finger, hand and body detection for convenient and fast interaction between man and machine
- Defined protected area with infrared protection field – suitable for safety applications up to PLe SIL3
- Safe machine stoppage in safety-critical applications
- Better space utilization by eliminating the need for protective fence structures
- High level of manipulation protection

Safety guard locking devices for machines and equipment

SAFETY GUARD LOCKING DEVICES

Interlocking and guard devices from Balluff offer high holding forces of 1000 to 2500 newtons and ensure personal and machine protection. They are suitable for safety applications up to PLe/SIL3 and are an intelligent solution for preventing uncontrolled access to hazardous areas. Our safe interlocking devices feature a high coding level with great anti-tamper protection.

With the different operating principles available from Balluff you can enjoy a wide range of application possibilities. Choose from electromechanical or transponder-coded interlocking devices. It's also good to know that the rugged housings with LED indicator will stand up to harsh environments. This makes selecting the right solution easy.

The most important benefits

- Suitable for safety applications up to PLe/SIL3
- Insensitive to vibration and mechanical play
- Save installation and assembly time and money
- Also suitable for heavy protective equipment
- Manipulation-resistant
- Simple connections using standardized M12 connectivity

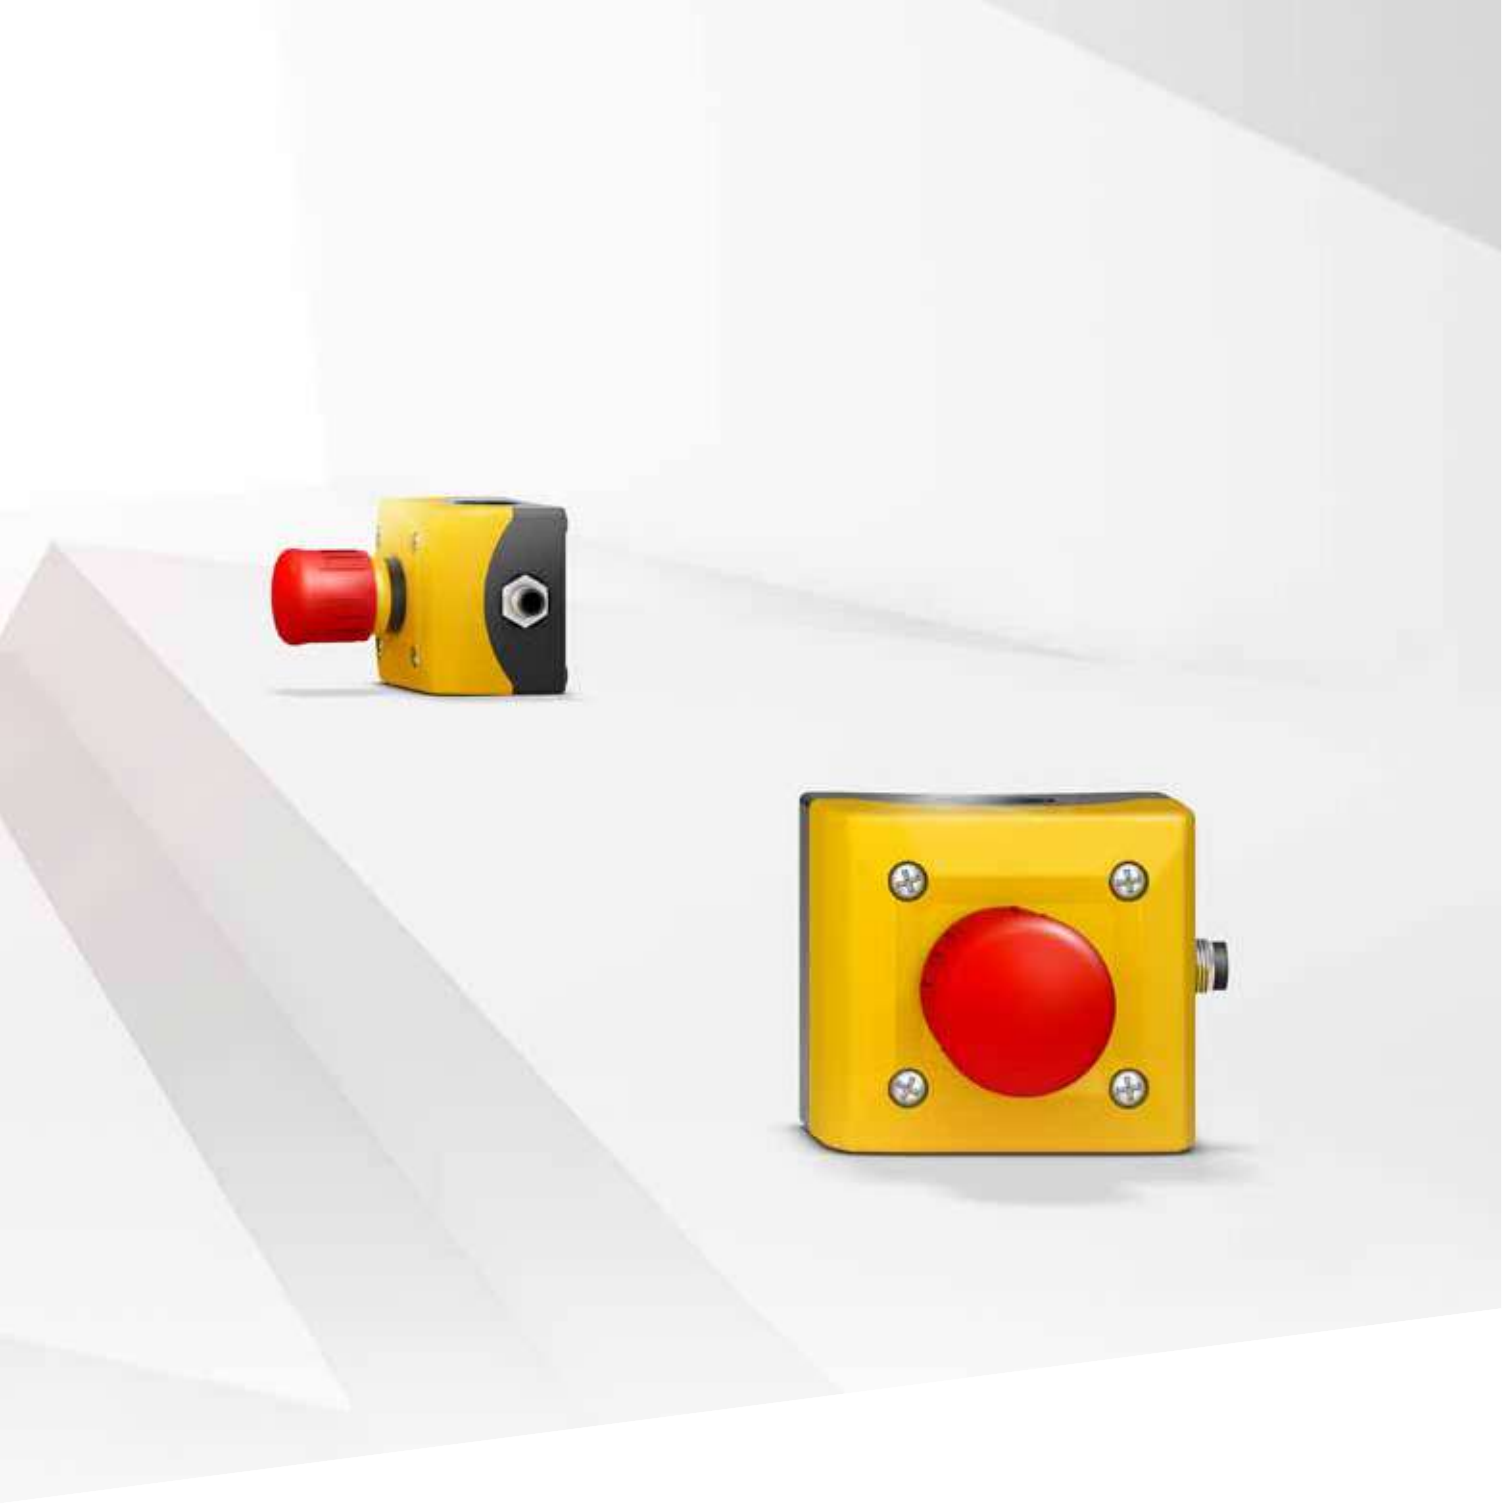
Quickly stop machines at critical times

SAFETY COMMAND DEVICES



Safe operation of automatic machines and equipment falls under a company's due diligence responsibility. To be sure that in emergency situations machine hazards can be prevented or reduced, safety command devices such as E-Stop or E-Off units must be used. As a supplementary protective measure equipment must always include an E-Stop device – whether during installation, operation or maintenance. And regardless of whether this function is implemented as an E-Off (shuts off power) or an E-Stop (hazardous process or movement is stopped).

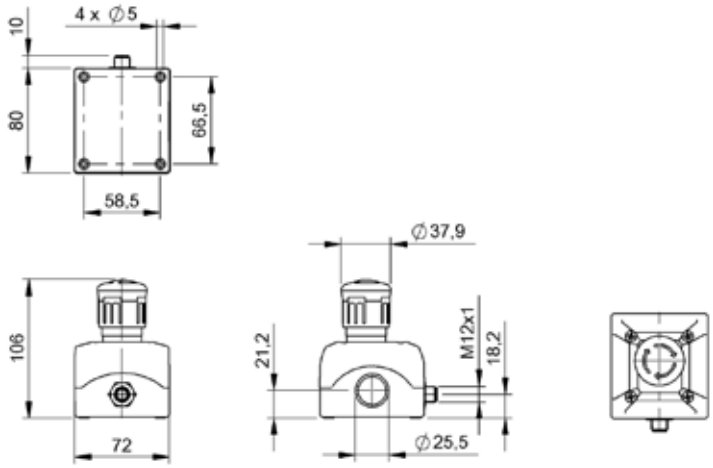
The safety command devices must be easy to reach, always available and functional, and should bring the machine to a safe condition immediately. Our highly visible command devices carry out an immediate E-Stop function when there is a malfunction. This makes them ideal for protecting both persons and machines.

The safety command devices from Balluff feature a compact housing, so that you can install them on various machines, even where space is at a premium. They are also quite easy to install.

The most important benefits

- Reliable disconnection of the power supply
- Positive opening operation compliant with IEC 60947-5-1, Addendum K
- Pluggable connection with M12 (5-pin)
- Turn-to-release mushroom pushbutton
- High degree of protection against dust and water
- Compact housing, easy installation

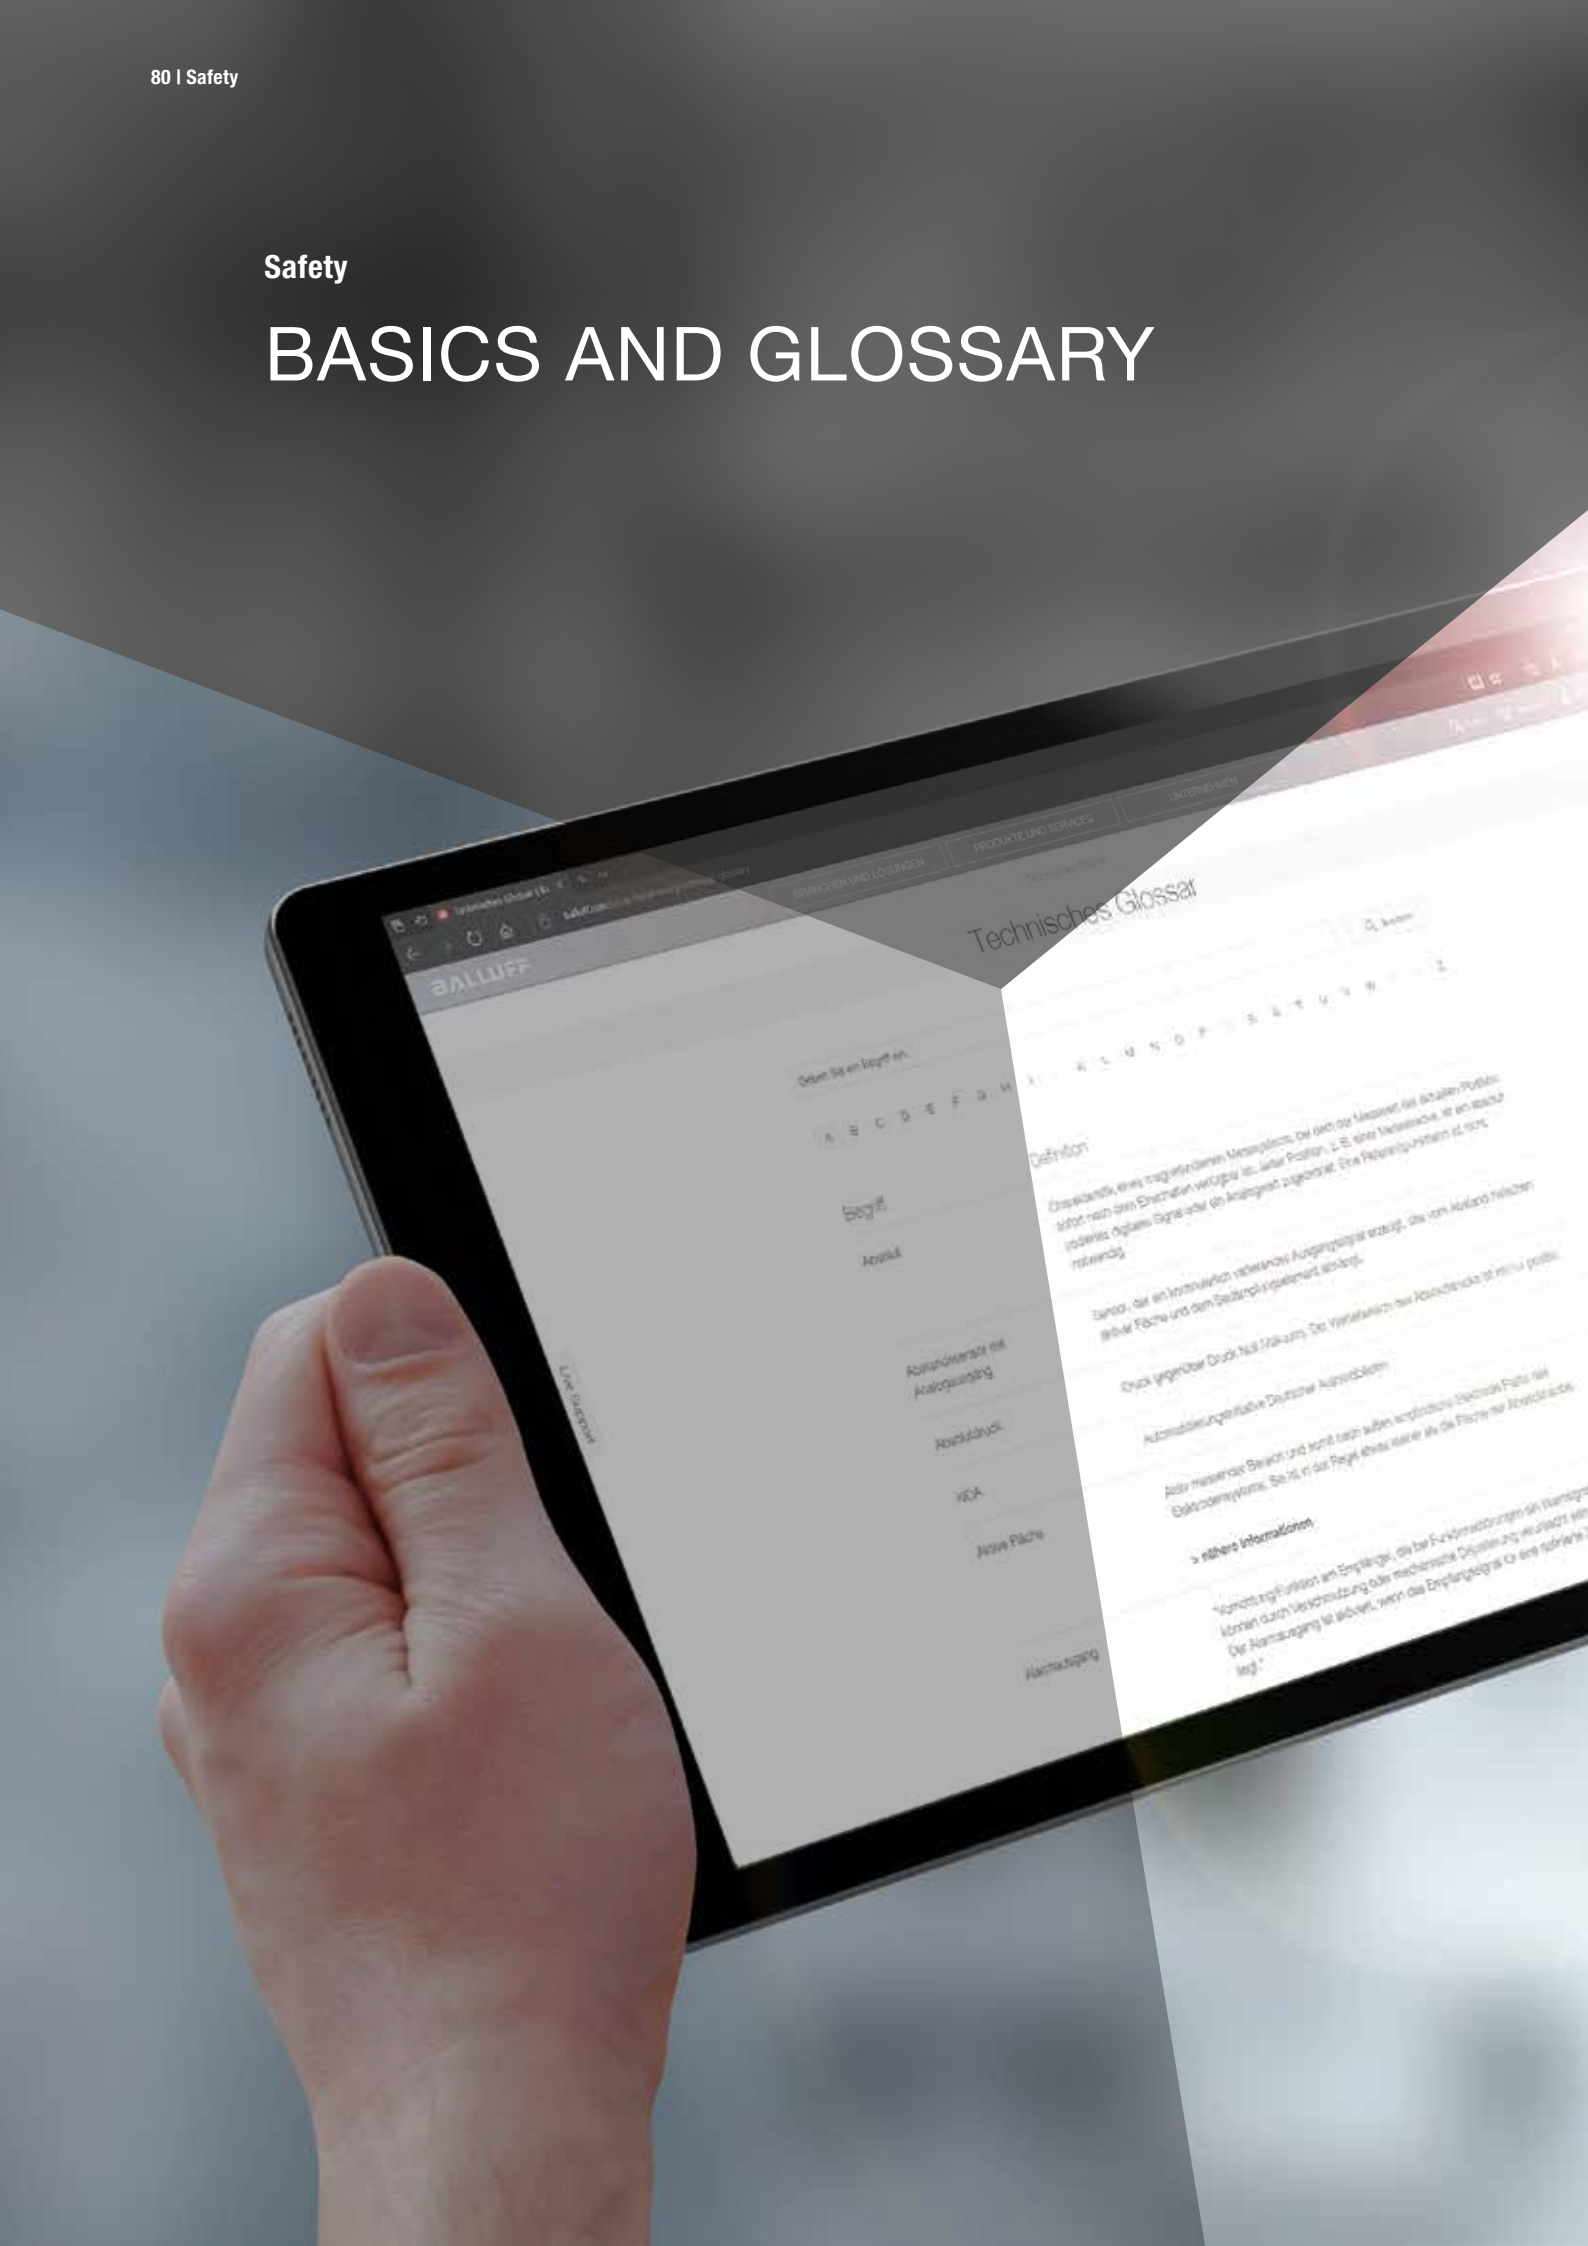
	BAM02HA BAM ES-XA-01D-01-R01-201-S92
B10d (EN ISO 13849-1)	0.1 million Switching operations
Approval/Conformity	UL CERTIFIED, CE, TÜV
Operating principle	PIM-Export ERROR: Attribute failed
No of contacts	2x positive opening
Utilization category	AC-15, DC -13
Type of release	Turning
Life expectancy mechanical	0.06 million Switching operations
Connection	M12x1-Male, 5-pole, A-coded
Dimension	80 x 106 x 72 mm
Ambient temperature	-25...70 °C
Protection degree	IP65
Housing material	Plastic
Productview	Page 79

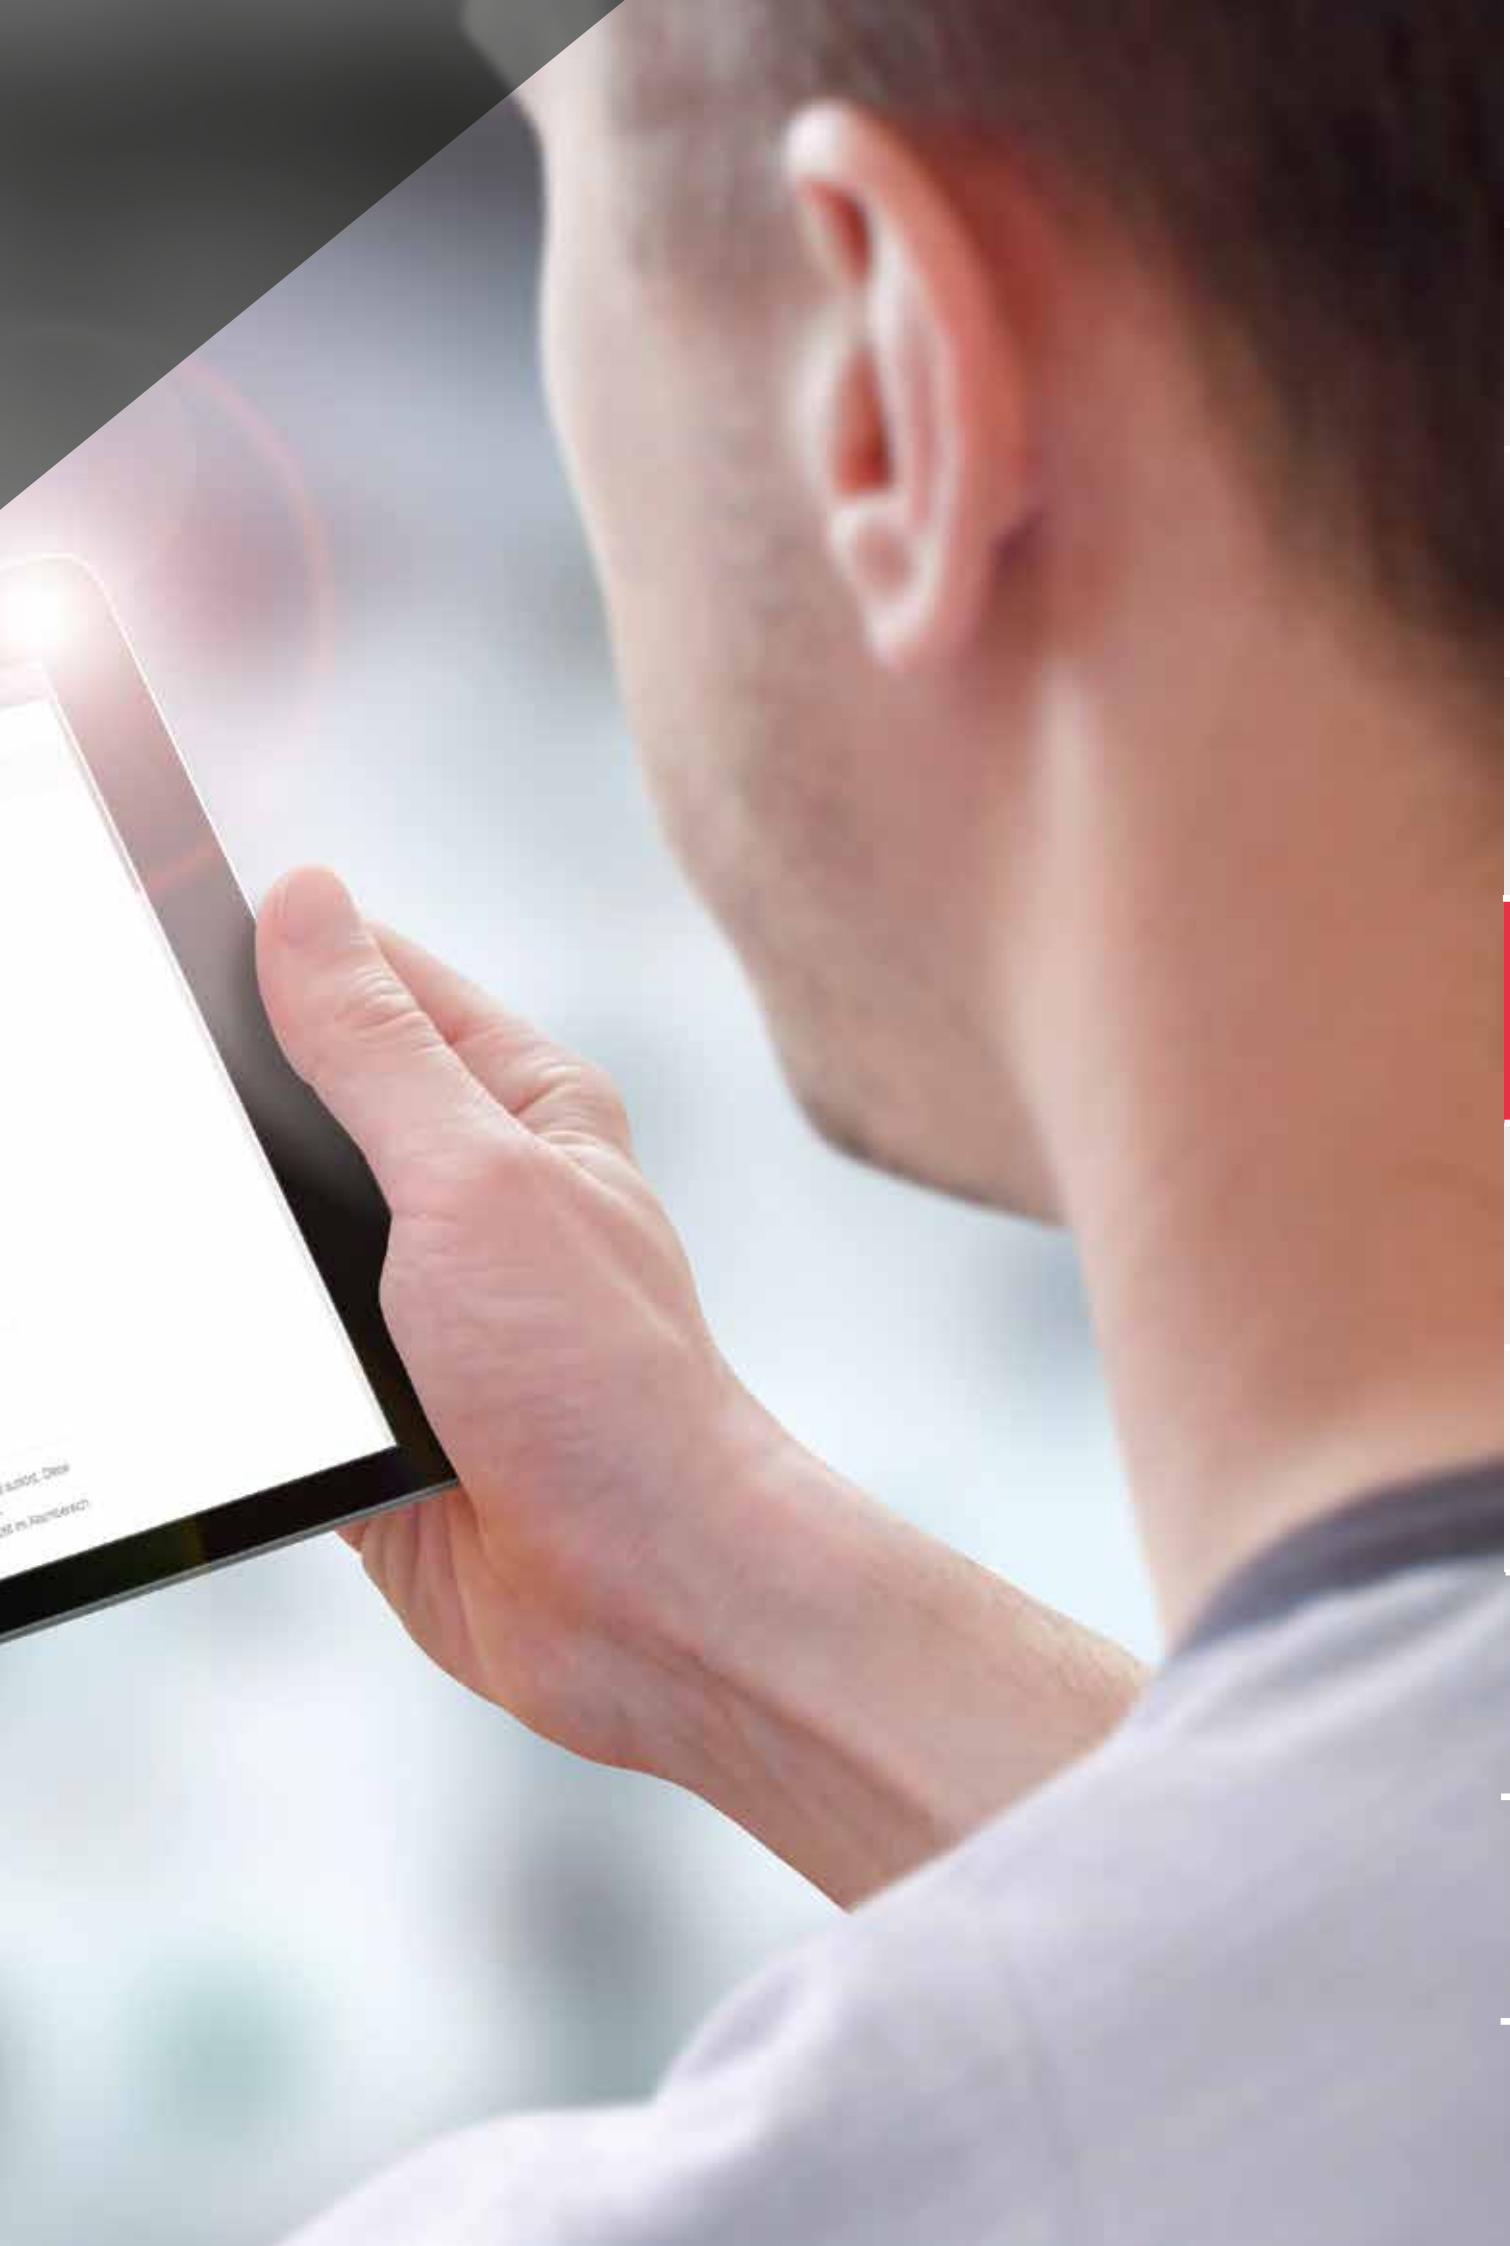


BAM02HA

Safety

BASICS AND GLOSSARY





AOPD	Active opto-electronic protective devices (e.g. light curtains)	DIN EN ISO 13849-1, EN ISO 12 100
AOPDDR	Active opto-electronic protective device responsive to diffuse reflection (e.g. laser scanners)	DIN EN ISO 13849-1, EN ISO 12 100
Open-circuit principle	Using the example of an interlock: when the actuator is plugged in, the current circuit of the safety contacts is closed when the solenoid is energized, causing the device to lock. If the voltage is eliminated from the solenoid, the safety contacts are opened and the locking mechanism is released. See also "Closed-circuit principle"	
Failure	The inability of a unit to fulfill a required function	DIN EN ISO 13849-1, EN ISO 12 100
β	Is the common cause failure factor for undetectable dangerous faults λ_{DU}	IEC 62061
B_{10d}	Number of cycles until 10 % of the components fail dangerously	DIN EN ISO 13849-1
Construction types (of interlocks)	**Type 1:** Interlock with mechanically actuated position switch with non-coded actuator (e.g. interlock with hinge) **Type 2:** Interlock with mechanically actuated position switch with coded actuator (e.g. tongue actuated position switches) **Type 3:** Interlock with non-contract actuated position switch with non-coded actuator (e.g. proximity switches) **Type 4:** Interlock with non-contract actuated position switch with coded actuator (e.g. RFID transponder actuated position switches)	DIN EN ISO 14119
User information (illustrative safety)	All of the information required for safe and proper use of the machine. It informs the user of the residual risk and warn him of it.	EN 12100

ESPE	Electro-sensitive protective equipment	EN 61496
CCF	Common cause failure, a specific type of dependent failure where several failures result from a single shared cause.	DIN EN ISO 13849-1
CE marking	Indication from the manufacturer, distributor or EU-Representative that declares a product in compliance with EU regulation 765/2008, meaning the product meets the prevailing requirements as specified in the harmonization legislation of the Union regarding its affixing.	EU regulation 765/2008, EU regulation 765/2008
Coding	Connectors are designed to be reverse polarity protected.	DIN EN ISO 13849-1, IEC 62061, IEC 61508-2:2000
Coding levels (of interlocks)	The coding of actuators/tags is intended to prevent the interlocking device to be defeated using easily available means. Low coding = 1 to 9 different codes Medium coding = 10 to 1000 different codes High coding = > 1000 different codes	EN ISO 14119
CRC	Cyclic redundancy check, procedure for determining a check value for data in order to detect errors in transmission or saving.	
DC	Diagnostic coverage indicator of the probability that the errors will be revealed by means of a test. Safety systems must be tested so that one knows whether they still function. The diagnostic coverage depends on the quality of the test. Poor tests cover only a few, whereas good tests cover many or even all errors. DC = $\sum\lambda dd/\lambda dtotal$	DIN EN ISO 13855
DCavg	Average diagnostic coverage DC: Measure of the effectiveness of the diagnostics, which can be determined as the ratio of the failure rate of the detected hazardous fault and the fault rate of the total dangerous failures.	DIN EN ISO 13849-1
Diversity	Having multiple means for performing a required function. Diversity-redundant systems can increase reliability.	DIN EN 61508-4, VDE 0803-4

E/E/PES	Functional safety of electrical/electronic/programmable electronic safety-related systems	DIN EN 61508
EDM	Monitoring of controlled actuators, feedback circuit	
Supplementary protective measures (indirect safety) (indirect safety measures)	Standards that must be taken to protect persons from hazards which cannot be sufficiently prevented or where the risks cannot be sufficiently limited.	EN 12100
Broken spring	A failure in a mechanical switching element that can result in a malfunction.	
Error	Condition of a unit characterized by its inability to perform a required function. Not to be confused with "tampering"	DIN EN ISO 13849-1, EN ISO 12100
FIT	Failure in time: A singular failure per 10^9 hours, or one failure per 114,000 years.	DIN EN ISO 13849-1
Escape release	Ability for manual unlocking of the interlocking device without aid from inside the protected area in order to exit this area.	DIN EN ISO 14119
FMEA	Failure mode effects analysis	DIN EN ISO 13849-1, EN ISO 12100
Functional safety	The part of overall safety which depends on the correct function of the E/E/PE safety related system for risk reduction	DIN EN 61508-4 VDE 0803-4
Hazard/risk	Potential source of damage	DIN EN ISO 13849-1
Hazardous area (risk area)	Any area in a machine and/or around a machine in which a person can be subjected to a hazard.	EN ISO 12100
Strict liability	The liability for damages resulting from a permissible risk (e.g. operation of a hazardous device, keeping of a house pet). Strict liability does not depend on the illegality of the action or on the fault of the injuring party.	§§ 1, 10 ProdHaftG – Manufacturer of a (defective) product

Device types	Devices which are evaluated as a system first by the design process of the user are Device Type 2 or 3. Type 1 or Type 4 have been developed directly for use in a safety function. **Device Type 1:** Devices are ready to use safety devices with integrated diagnostics. These are already classified as SIL or PL. Examples: Safety light curtain, safety light grid, components for safety controllers, safe drives/drive functions, safety switching devices **Device Type 2:** Devices where the user must himself evaluate the device in terms of its safety. This requires additional application data (circuit structure, DC, CCF). Examples: Non-safe electronics, e.g. operational amplifier, proximity switch, pressure sensor, hydraulic valve **Device Type 3:** Devices are subject to wear. The user must provide additional application data for evaluating the safety function (switching frequency, actuation frequency, circuit structure, DC, CCF). Examples: Wear-prone electro-mechanical components, including power contactors, switches, pneumatic valves, interlocking devices, command devices **Device Type 4:** A special case of Device Type 1. For Device Type 4 the probability of a dangerous failure per hour PFHD = 0. The fault is either precluded or the fault always results in a safe state.	EN 62061, VDMA 66413 standard sheet
GSD file	General station description, a file which describes the features of a device type uniquely and fully in an exactly specified format. The GSD is generated individually for each device type by the manufacturer and provided to the user as a file for designing Profinet systems.	
GSDML	GSD Markup Language is a language for describing Profinet IO field devices. See also "GSD file"	
HFT	Hardware fault tolerance: Ability to still perform a required function in the presence of errors or failures	DIN EN 62061, VDE0113-50
Auxiliary Release	The manual unlocking of the interlocking device using a tool or key from outside the protected area in case of a malfunction. An interlocking device with auxiliary release is not suitable for emergency release or escape release of the interlocking device.	DIN EN ISO 14119

Inherent safety	Direct intrinsic safety: A design that prevents hazards or reduces risks through suitable selection of design features of the machine itself.	EN 12100
Placing on the market	Includes the responsibility if a distributed product does not comply with the relevant regulations.	MaschRL 2006/42/EG Article 5
IODD Checker	A tool that tool checks not only the schema conformity, but also all the rules of the IODD specification which cannot be checked using an XML schema.	EN 12100
IODD	IO device description concerning sensors and actuators in an IO-Link network. It contains information for identification, device parameters, process and diagnostics data, communication properties and the structure of the user interface in engineering tools.	ISO 15745
IO-Link	IO-Link is the standardized IO technology for communicating with sensors and actuators. IO-Link is not a fieldbus, but rather a point-to-point communication based on the long-familiar 3-conductor sensor and actuator connection.	IEC 61131-9
Iterative process	A process of repetition of the same or similar actions for approaching a solution or particular goal.	DIN EN ISO 13849-1
Category [Cat.]	Categorization of the safety-related parts of a controller with respect to their resistance to errors and their behavior following an error. Categories are based on the structure of the arrangement of the parts, the error detection and/or their reliability.	IEC 61131-9
Conformity	Declaration by the manufacturer that the distributed machine complies with all the relevant safety and health requirements.	MaschRL 2006/42/EG Article 7/12

λ (lambda)	Failure rate in [FIT] = 10^{-9} 1/h	IEC 62061
λ_d	Failure rate in the unsafe (hazardous) direction	IEC 62061
λ_{dd}	Failure rate in the unsafe (hazardous) direction; the failure is however detected through diagnostic means before it can have a hazardous effect.	IEC 62061
λ_{du}	Failure rate in the unsafe (hazardous) direction; the failure is not detected	IEC 62061
Λ_s (also: λsafe)	Failure rate in the safe direction	IEC 62061
Tampering	Intentional defeating or by-passing of protective devices and their components	Addendum 1 No. 2.8 BetrSichV
MTTFd	Mean time to failure: Expected value of the average time until a dangerous failure	DIN EN ISO 13849-1
MTTR	Mean time to repair	
Muting	Temporary automatic suppression of one or more safety functions by the SRP/CS	DIN EN ISO 13849-1
NC	Normally closed contact	
NO	Normally open contact	
Emergency unlocking	Ability for manual unlocking of the interlocking device in emergency cases without aids from outside the protected area. An interlocking device with emergency unlocking can for example be required for freeing enclosed persons or for fire fighting.	

OSSD	Output Signal switching device	EN 61496-1
PDDB (formerly PDF)	Proximity switch with defined behavior under fault conditions	DIN EN 60947-5-3:2014-12, VDE 0660-214:2014-12
PL	Performance level: Discrete level which specifies the capability of safety-relevant parts of a controller for performing a safety function under predictable conditions	DIN EN ISO 13849-1
Personal protection	Use of an interlocking device for protecting a person from a hazard. (See also "Process protection")	
PFD	Probability of failure on demand	EN IEC 61 508-1/-7:2001
PFD(T)	Probability of a hazardous failure on demand at time T. (T generally refers to the proof test interval)	
PFDav	Average probability of failure on demand	
PFH	Probability of (dangerous) failure per hour	
PFHd	Probability of a dangerous failure per hour of a safety system or sub-system	DIN EN 62061, VDE 0113-50
PIPD	Passive infrared protective device	
Product liability	Liability for damages compensation on the part of the manufacturer for damages to the end user resulting from a defective product	§4 Par. 1 Sentence 1 ProduktHaftG
Profisafe	How safety devices (E-Stop buttons, light grids, overfill prevention systems etc.) safely communicate with safety controllers over Profibus.	

Process protection	Use of an interlocking device for protection against interruption of the work process. See also "Personal protection"	DIN EN 62061, VDE 0113-50
PTE	Probability of transmission error: Probability of a hazardous transmission error	EN 61508, EN 62061
RDF	Ratio of dangerous failures (= λD/λ)	VDMA 66413 standard sheet
Response time (for devices)	Time between action and reaction Example for safe I/O module: – Time between detection of a (state) change on the input port and the availability of this information on the communication interface (IO-Link) – Time between detection of new information on the communication interface (IO-Link) and its implementation on the output port	EN 61508, EN 62061
Redundancy	Reproducing critical components or functions of a system in order to increase reliability	IEC 61784-3
Residual risk	Risk remaining after protective measures have been taken	DIN EN ISO 13849-1, ISO 12100
Risk analysis	Combination of determining the limits of the machine, identifying the risk, and risk assessment	DIN EN ISO 13849-1, EN ISO 12100
Risk assessment	Totality of the process which includes a risk analysis and risk assessment	DIN EN ISO 13849-1, EN ISO 12100
	Assessment based on the risk analysis as to whether the goals for risk reduction were achieved	DIN EN ISO 13849-1, EN ISO 12100
Risk estimation	Determination of the probable extent of damage and probability of its occurrence	EN ISO 12100-1, DIN EN 1050

Risk graph	Means for classifying risk. Determines which PL or SIL results from a given case. Factors include severity of the injury, frequency and/or duration of exposure to the hazard, and possibilities for preventing the hazard	DIN EN ISO 13849-1, DIN EN 62061
Closed-circuit principle	Using the example of an interlock: when the actuator is plugged in the current circuit of the safety contacts is closed when the solenoid is energized, so that the device locks. The principle of circuit design where a normally energized electric circuit which, on being interrupted or deenergized, will cause the controlled function to assume its most restrictive condition. See also "Open-circuit principle"	
Safe stop 1 SS1	Corresponds to Stop Category 1 pursuant to IEC 60204. See also "Stop category"	IEC 60204-1
Safe stop 2 SS2	Corresponds to Stop Category 2 pursuant to IEC 60204. See also "Stop category"	IEC 60204-1
Safe torque OFF STO	Corresponds to Stop Category 0 pursuant to IEC 60204. See also "Stop category"	IEC 60204-1
Damage	Physical injury and/or damage too health or objects	DIN EN ISO 13849-1, DIN EN 61508-4, VDE 0803-4
Protection devices	Protective device or guard for protecting persons from possible dangers of a machine.	EN ISO 12100
Protection field	Area in which a specified test body is detected by the protective device	DIN EN ISO 13855
Protective measure	Measure which provides for risk reduction	DIN EN 62061, VDE 0113-50
SFF	Safe failure fraction: Fraction of the total failure rate of a sub-system which results in a non-dangerous failure	DIN EN 61508-4, VDE 0803-4, DIN EN 62061, VDE 0113-50

Safety function	Function of a machine whereby a failure of the function can result in an increased risk (or risks)	DIN EN ISO 13849-1, EN ISO 12100
SIL	Safety integrity level discrete level for specifying the safety integrity of the safety functions, whereby SIL 4 represents the highest level and SIL 1 the lowest level.	EN 61508
SIL CL	SIL claim limit (of a sub-system)	EN 62061
Simatic	Product family name of the Siemens company. It is used for products in automation technology, control technology and the manufacturing execution level.	
SRCF	Safety-relevant control function	EN 62061
SRECS	Safety-relevant electrical control system	EN 62061
SRP/CS	Safety-relevant part of a controller which responds to safety-relevant input signals and generates safety-relevant output signals	DIN EN ISO 13849-1
SRS	Safety requirements specification	
Stop category	**Stop category 0:** Bringing to a stop by immediately interrupting power to the machine drive elements (i.e. an uncontrolled stop) **Stop category 1:** Controlled stopping, where the power to the machine drive elements is retained in order to cause stopping. The power is only interrupted when stop is achieved. **Stop category 1b:** Controlled stopping, where the power to the machine drive elements is maintained in order to cause stopping. Continuity of the stop condition is monitored, and when a failure is detected power is interrupted without generating a hazardous situation. **Stop category 2:** Controlled stopping, where power to the machine drive elements is maintained	IEC 60204-1

TCI	Tool calling interface: Software for enabling communication over Profibus DP or Profinet IO	
TD	Diagnostic test interval: Time between online tests for uncovering errors in a safety-relevant system with a specified diagnostic coverage degree.	DIN EN 61508-4
TIA	Totally integrated automation: Software framework for the entire automation software. The TIA portal is the successor to the traditional STEP 7	
TM	Mission time: Time which covers the specified use of the SRP/CS	DIN EN ISO 13849-1
TS	Sub-system	DIN EN 62061
TSE	Sub-system element	DIN EN 62062
By-passing	An action by means of which the interlocking device can be disabled or by passed such that a machine can no longer be used as intended by the designer or only without the required safety measured.	DGUV
Validation	German Social Accident Insurance, ensures that a product provides the required results. See also "Verification"	DIN EN 61508-4, VDE 0803-4 PMBOK
Verification	Confirmation that a product meets the requirements. See also "Validation"	DIN EN 61508-4, VDE 0803-4 PMBOK
Interlock(ing device)	Mechanical, electrical, or other type of device meant to prevent dangerous machine functions under defined conditions (in general as long as the isolating protection device is not closed). See also "Construction types [of interlocking devices]"	DIN EN ISO 14119

Fault-based liability	The obligation for damages replacement based on legal liability provisions under private law which presume a culpable, i.e. not only objective illegal, but rather personally attributable behavior which is intentional or negligent.	§§ 823 ff BGB
Guard locking device	Device whose purpose is to keep a separating protective device in the closed position and which is connected to the controller.	DIN EN ISO 14119
Reliability	The ability of an object to perform a particular function under particular conditions over a specified time interval	IEC 60050
Positive opening contacts	Contacts in a relay/contactor which are mechanically connected to each other such that normally open and normally closed can never be in the same position at the same time.	IEC EN 60947-5-1, Addendum L
Positive opening	Assurance of contact separation as a direct result of a specified movement of the operating component of the switch over non-sprung parts.	DIN EN 60947-5-1, Addendum K

MACHINE VISION AND OPTICAL IDENTIFICATION

Quality assurance with industrial grade image processing

MACHINE VISION

Machine Vision from Balluff ensures quality and flexibility in modern production facilities. Through the use of industrial image processing our machine vision products provide reliable defect detection and, thereby, ensure exact quality control. All functions of the sensors can be flexibly combined.

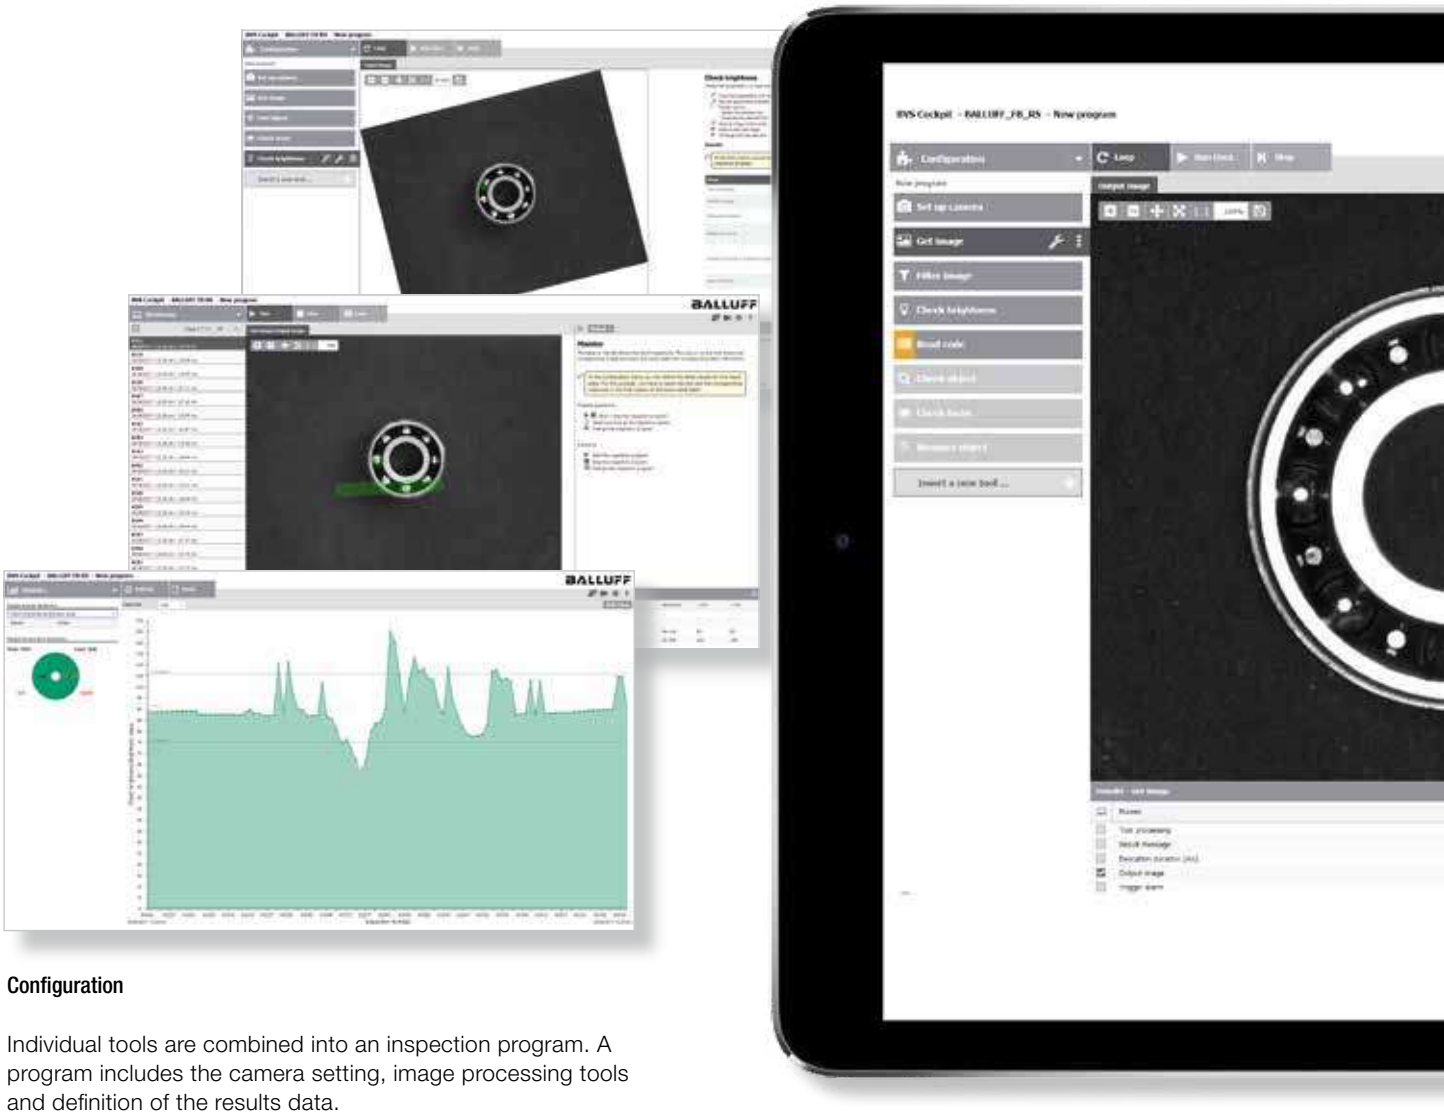
Features

- High cost-effectiveness and potential for cost reduction
- Less scrap thanks to early defect detection
- High system uptime when changing batches

BAI BVS – Balluff Vision Solutions

BVS-COCKPIT NO EXPERTISE REQUIRED

The BVS Cockpit user interface makes it easy to access all functions. You can intuitively set up our cameras with no prior knowledge. In short: our camera concept is designed for everyone.



Configuration

Individual tools are combined into an inspection program. A program includes the camera setting, image processing tools and definition of the results data.

Monitor

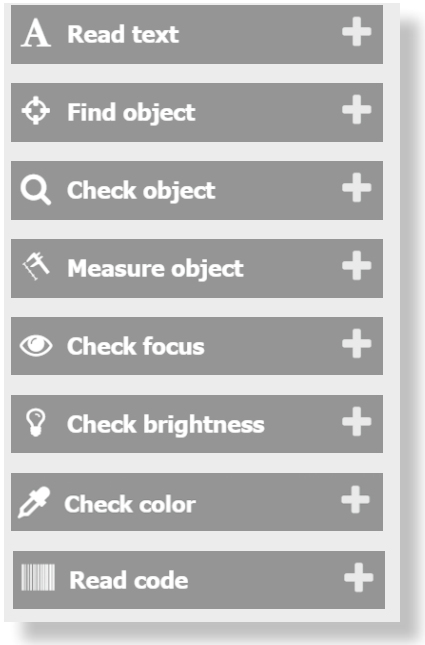
The monitor shows you the current inspection program. The SmartCamera can store up to 100 inspection programs which you can select individually either directly or through the controller.

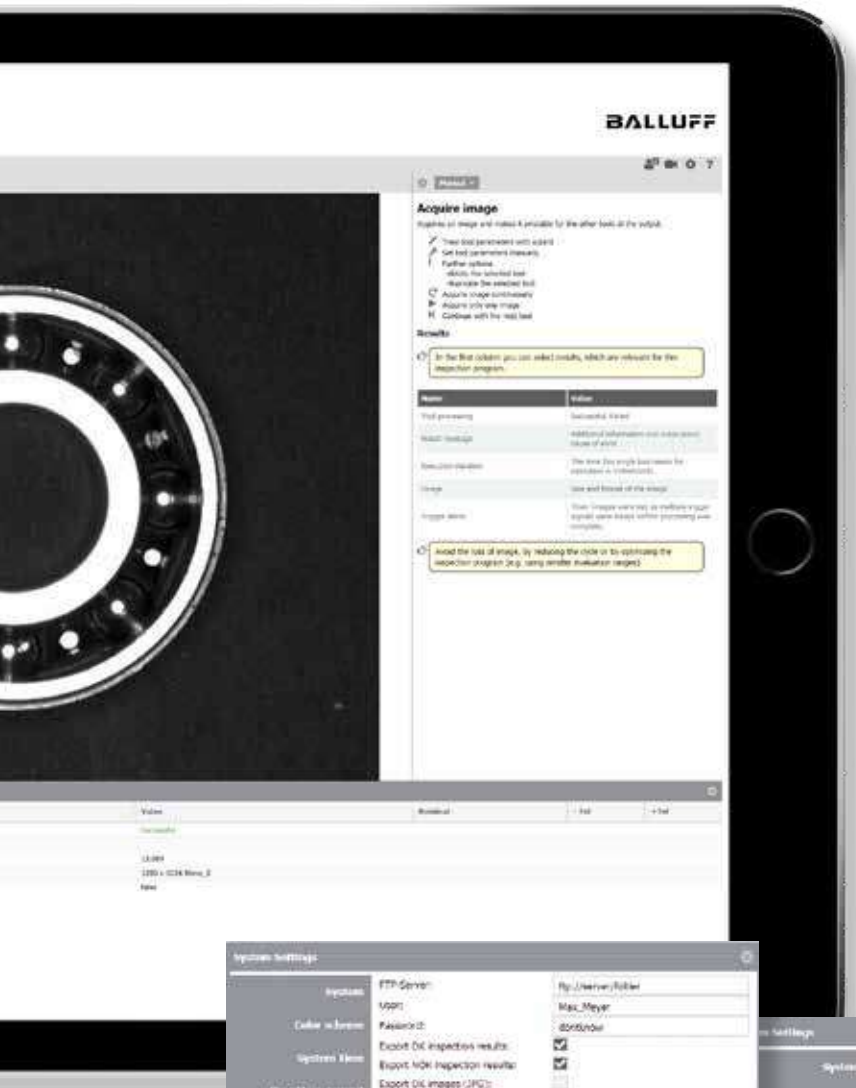
Statistics

While the camera is performing an inspection you can access the statistics, view the entire production quality and analyze the results parameters statistically and in timely fashion. Just a click lets you switch from a graph point to the associated inspection display in Monitor mode.

Image processing tools

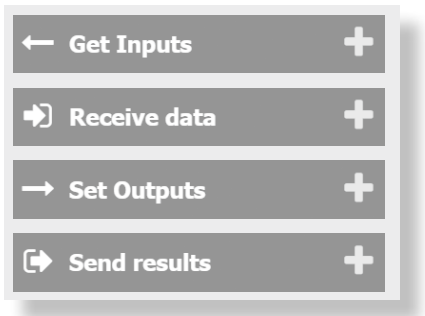
Simple to use, flexible and reliable. The SmartCamera offers intuitive operation and simple to use tools which are based on industry-standard HALCON basic algorithms – all of which ensures you of fast and reliable solutions.

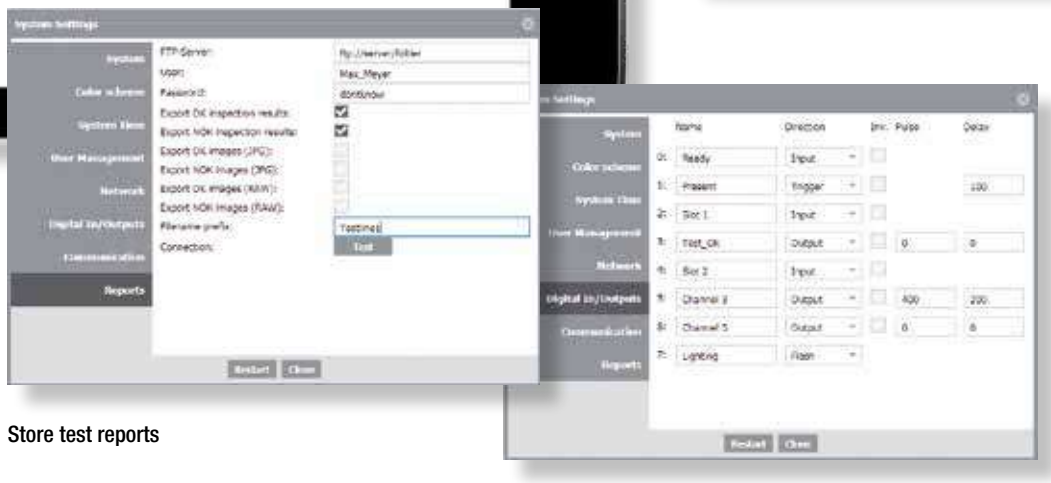




Interface tools

Results can be passed dynamically to the appropriate interface for the particular industrial system.





Store test reports

You can automatically create a results report in XML-format after each inspection and save the associated images to an FTP server. The storage condition can be defined with filter settings (ok/nok).

Definition of inputs and outputs

Up to eight digital channels are assigned to electrical connector pins by type, function and time behavior.

Secure identification and decoding of objects

OPTICAL IDENTIFICATION

Optical identification via 1D and 2D barcodes is an established way to identify components and objects and precisely manage systems and processes. Our broad range of offerings in this area includes stationary barcode readers, mobile handheld readers and accessories for standard and industrial grade applications.

The most important benefits

- Reliable traceability of products and assembly
- Application areas: control supply processes (e.g., Kanban system), production control, optical tool identification
- Simple startup

Accessories

High-quality gear for virtually any application

ACCESSORIES

innovating automation

Our great selection of high-quality accessories supports you in the optimum embedding of the sensor in machines and systems. Through easy assembly and installation, exact positioning and high machine availability. The wide Balluff product range offers the optimum gear for nearly every application.

Your Balluff solutions

- Fastening technology
- Lighting for Vision Systems
- Reflectors, fibers, optics
- Mechanical protection
- Signal converters and communication adapters
- Mechanical accessories

High-quality accessories system for optical applications

REFLECTORS, FIBERS, OPTICS

Our accessories for optical applications include round and square reflectors and reflex films. You can obtain plastic and glass fibers as well as shields, lenses, filters and deflecting mirrors.

The optical accessory system is qualified for Balluff sensors and available in various versions, including for demanding applications.

The most important benefits

- High quality and flexible
- Simple to install
- Compatibility

Mechanical protection for sensors and devices

MECHANICAL PROTECTION

Our protective caps, protective housings, protective covers, protective tubes and sabotage protection prevent any mechanical damage to the sensor or a device.

Select from different versions – even for sophisticated applications.

The most important benefits

- High-quality and long service life
- Simple to install
- Compatibility

Versatile and flexible mounting solutions

FASTENING TECHNOLOGY

With our assembly systems and brackets, you can adapt the sensors and equipment to your particular task.

Simple to install and adjust, these provide – in addition to attachment – exact positioning, even under difficult conditions. Balluff mounting solutions are distinguished by high-quality materials and exact processing.

The most important benefits

- Flexible and versatile
- Compatible and universal
- Excellent price/performance ratio

Optimum lighting conditions for your application

LIGHTING FOR VISION SYSTEMS AND MACHINES

Balluff offers a wide range of rugged lights for your various installation spaces and tasks: for optimal lighting conditions in image processing and for machine lighting.

The energy-saving and long-lasting LED technology impresses with its homogeneous optical properties. Moreover, Balluff lighting options guarantee eye safety in accordance with IEC 62471. You can select between red light, white light, infrared light or laser variants.

The most important benefits

- Highest quality (extensive EMC tests, high protection class)
- Easy and fast assembly
- Simple startup
- Rugged, long service life

	BAE00AM BAE LX-VS-DR090
Connection	Cable with connector, M12x1 connector, 4-pin, 0.30 m
Version	Dark field light
Dimension	130 x 9.5 x 155 mm
Rated operating voltage Ue DC	24 V
Current draw max.	416 mA
Operating mode	Normal
Material	Aluminum anodized, black PMMA
Illumination area	Ø 90 mm
Light type	LED, red light
Wave length	617 nm
Illuminence (0.1 m)	2250 Lux
Ambient temperature	-10...55 °C
Approval/Conformity	CE, EAC
Protection degree	IP40

Efficiently transport signals with signal converters

SIGNAL CONVERTERS AND COMMUNICATION ADAPTERS

Our signal converters store an incoming signal in a specific format and output it in a different format.

Frequently, such modules are used in the conversion of analog signals into digital signals or vice versa. Likewise, you can convert different communication protocols using signal converters.

The most important benefits

- Easy installation
- Installation in the control cabinet or directly on the sensor
- Adaptation of the output signal to the application
- Mixing of different signals on an assembly possible
- Cost reduction potential

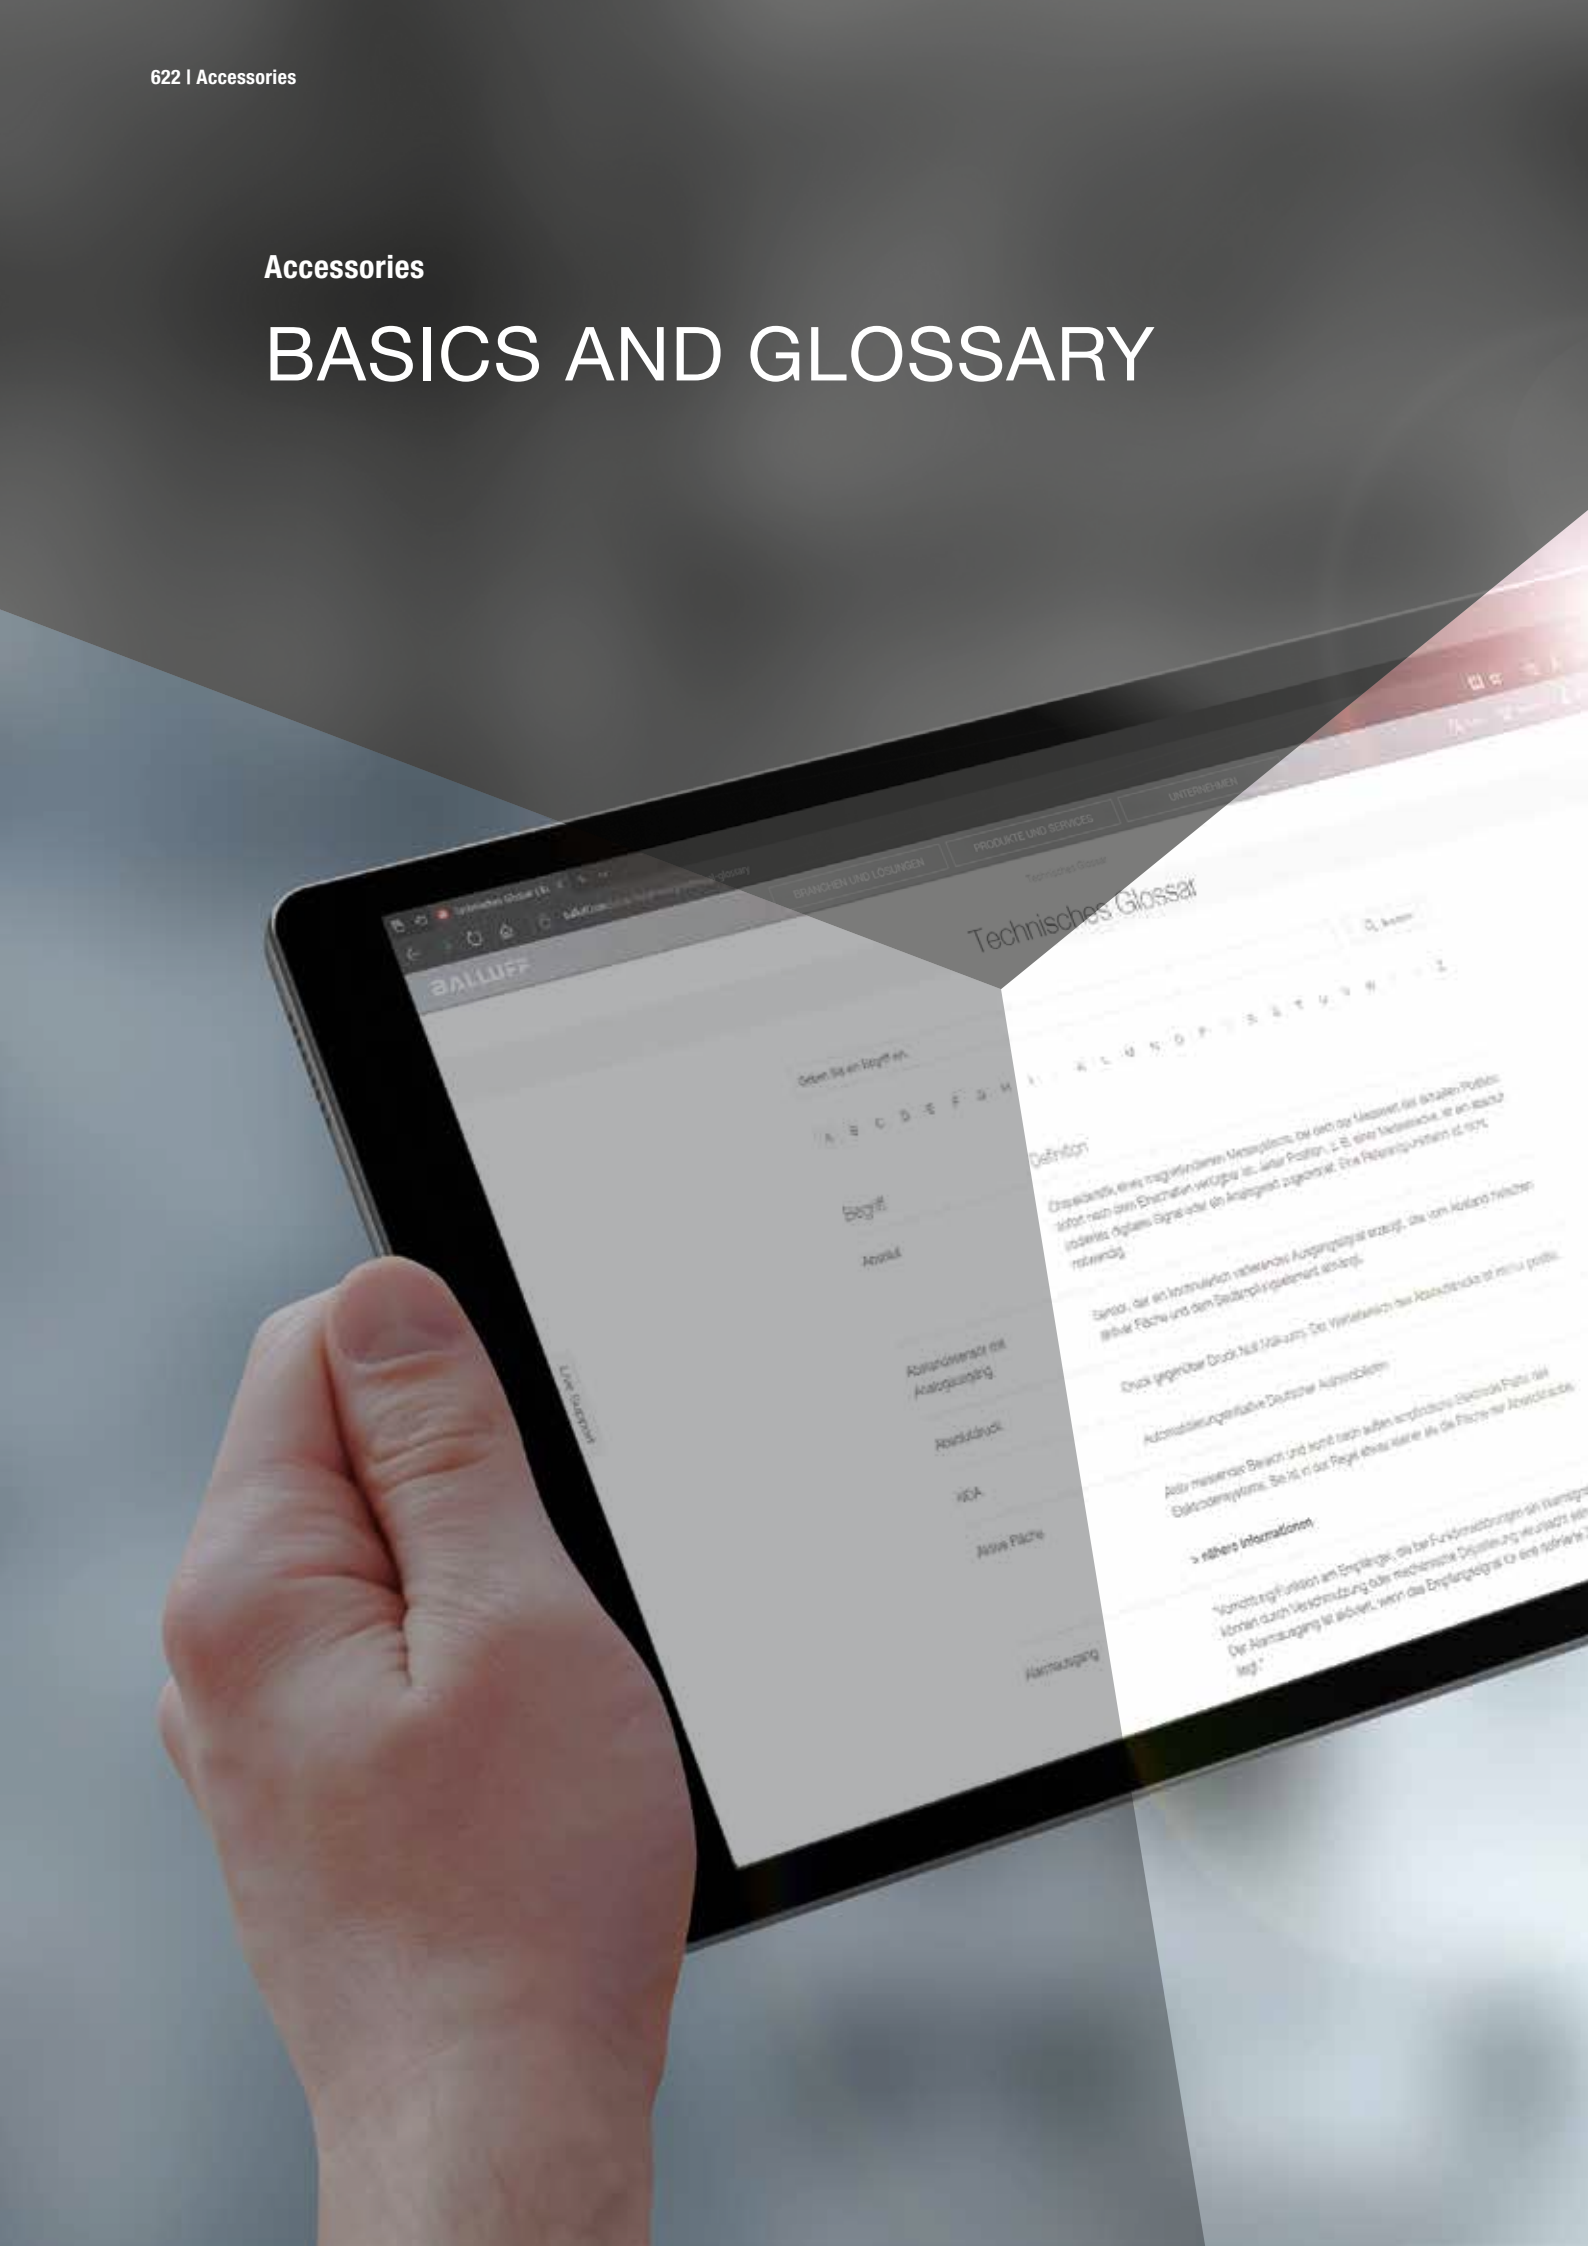
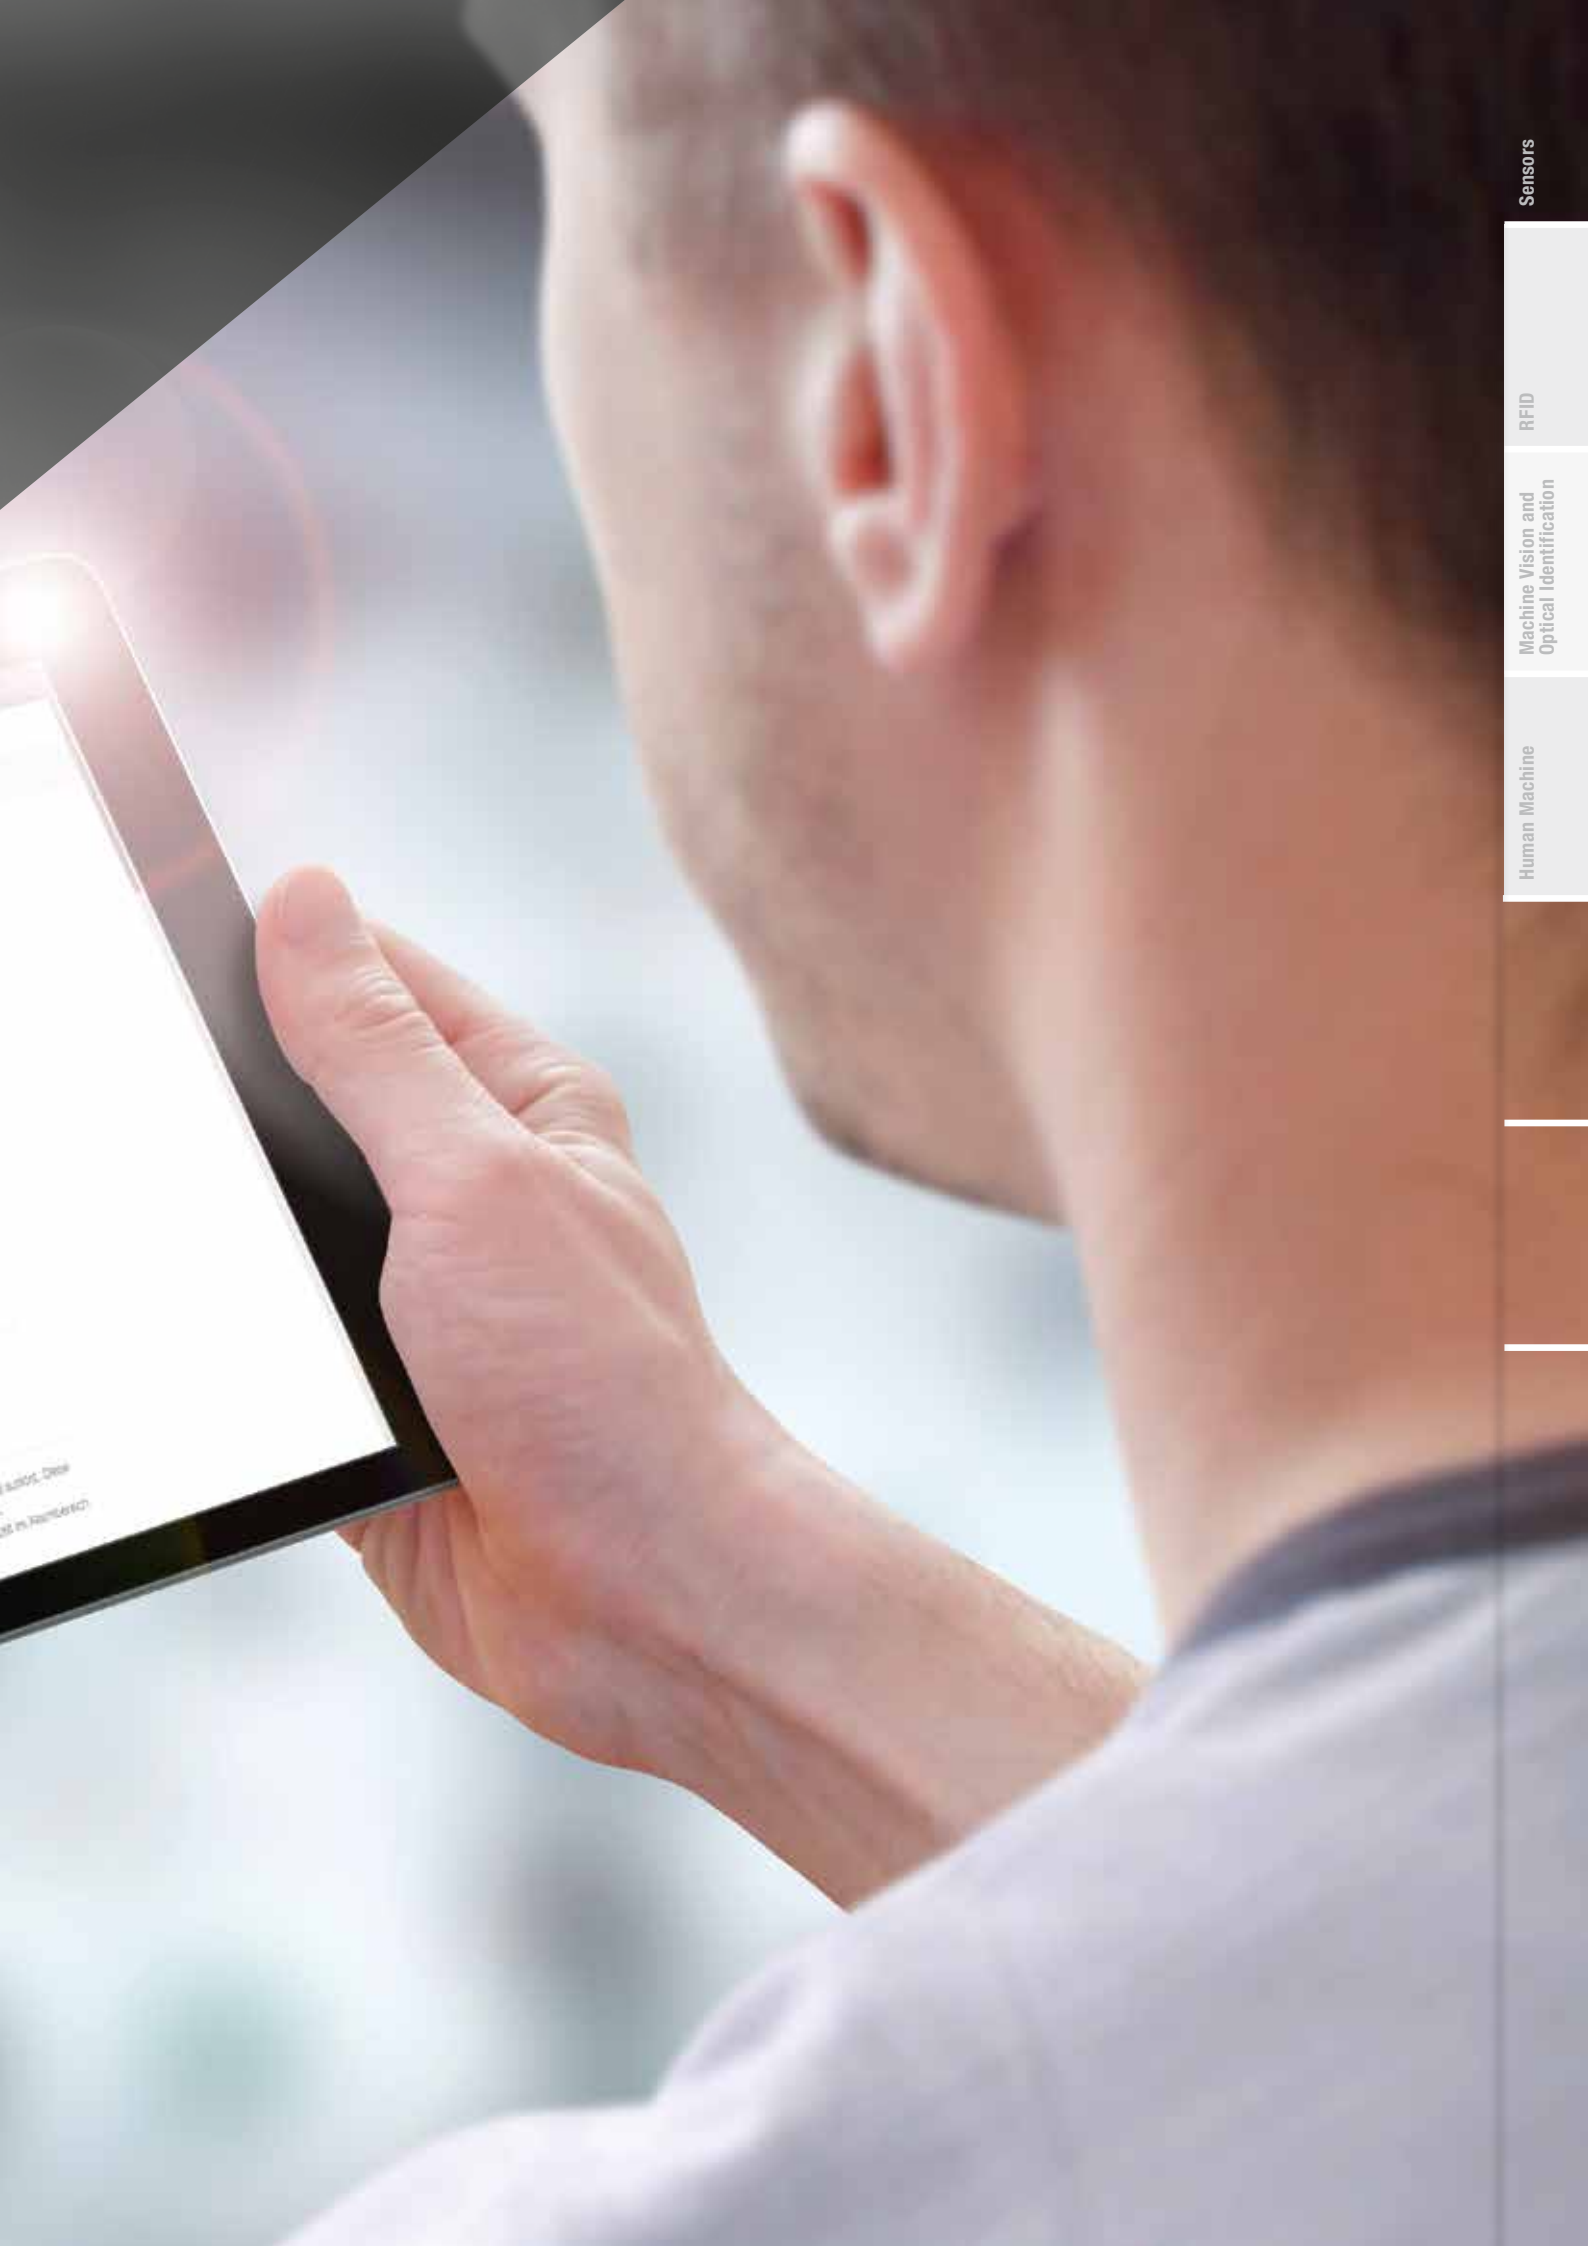
Accessories

BASICS AND GLOSSARY





FASTENERS

Mounting of mounting clamps

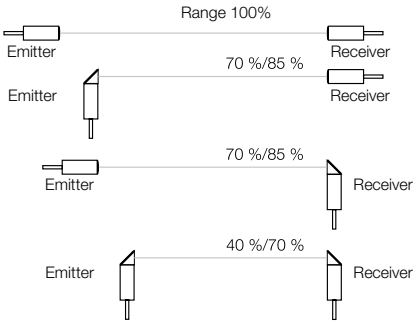
Small sensors or fiber optics are used in compact systems. In some situations, they are the only option. Tight spaces under demanding conditions often make positioning of the miniature sensors difficult. The mounting clamps demonstrate their diversity by holding a range of different sensors and fiber optics. They are extremely stable, variable and flexible. With just a few work steps, sensors and fiber optics can be mounted on housings or base plates.

- Mounting clamps for smooth sensors and fiber optics: Ø 3 mm, Ø 4 mm, Ø 6.5 mm, Ø 8 mm
- Simple and economical mounting
- Minimal wall thickness for internal threaded bore: 2 mm

ACCESSORIES FOR PHOTOELECTRIC SENSORS

Deflection heads, suitable combinations

All BOS 18 photoelectric sensors can be equipped with a 90° deflection head. The table shows the appropriate deflection head for each switch type and indicates the corresponding reduction factor (RF) to apply to the range. With a through-beam sensor, the emitter and the receiver can be equipped with a 90° deflection head. Each deflection head reduces the range by approx. 15...50 %.



Diagonal mirrors

When using the diagonal mirror, the sensing range is reduced by 30% for the M12 diffuse and M12 through-beam sensors. Not suitable for retroreflective sensors.

LIGHTS

What should the distance between the light and the component be?

The intensity of illumination on an object decreases quadratically with the working distance. Therefore objects that are farther away appear darker than closer objects. A bright object should be inspected, for example, once at a distance of 10 cm and once at 100 cm. The brightness of the object at 10 cm is 100 times greater than at a distance of 100 cm. Select the optimum distance between the light source, sensor and target object. In order to prevent saturation, make sure that the brightness of the light source is correct.

How should reflective components be illuminated?

When inspecting highly reflective surfaces, the sensor must be mounted with extreme care. If necessary, attach an external light to a suitable bracket in order to maximize the contrast between the object to be detected and the background.

How can the illumination of the part to be inspected be kept constant?

Avoid fluctuations in brightness due to ambient light, sunlight or other external light sources. These fluctuations are the most frequent cause of errors in image processing and are often difficult to identify. Errors can be limited by decreasing the exposure time of the sensor. External lighting may be required in addition to the light inside the sensor. Alternative solutions include covers or any kind of physical screen that specifically controls the light within the inspection area.

How should the field of view be illuminated?

The entire image area should be illuminated as evenly as possible. Avoid extremely bright points or dark areas. The component features you wish to inspect should, however, contrast as much as possible and show up clearly on the background. If you want to check for the presence of a certain feature, you can illuminate the component so that a clear shadow is cast upon the function to be identified. The Vision Sensor can then detect the feature.

MATERIALS

Material	Use and characteristics
PLASTICS	
ABS Acrylnitrile-Butadiene-Styrene	Impact-resistant, stiff, limited chemical resistance. Some types flame-retardant. Housing material.
AES/CP Acrylnitrile-Ethylene-Propylene-Styrene	Impact-resistant, stiff, limited chemical resistance. Housing material.
EP Epoxy resin	Duromer, molded plastic material, highest mechanical strength and temperature resistance. Very good dimensional stability. Cannot be melted.
Epoxy resin - hollow glass spheres	Hollow glass spheres can be treated with epoxy resins. They are used for manufacturing converters with low density and high pressure rating.
FEP Tetrafluorethylene-perfluorpropylene	High temperature resistance up to 180 °C, insulation material for cable.
LCP Liquid Crystalline Polymer	High mechanical strength and temperature resistance. Very good chemical resistance. Inherently non-flammable.
PA Polyamide	High impact resistance, good chemical resistance.
PA 6, PA 66, PA mod., PA 12 Polyamide	Good mechanical strength. Temperature resistance. PA 12 approved for food industry applications.
PA transp. Transparent polyamide	Transparent, hard, inflexible. Good chemical resistance.
PBT Polybutylene terephtalate	High mechanical strength and temperature resistance. Some types flame-retardant. Good chemical resistance. Good oil resistance.
PC Polycarbonate	Clear, hard, elastic and impact resistant. Good temperature resistance. Limited chemical resistance.
PEEK Polyetheretherketone	Thermoplastic. Very high strength and temperature resistance. Good chemical resistance. Can be sterilized, good resistance to ionizing radiation.
PEI Polyetherimide	High mechanical strength and good temperature resistance. Good chemical resistance even with many solvents. Transparent with amber-yellow inherent color (not pigmented).
PET Polyethylene terephtalate	High resistance to breakage, good dimensional stability. Frequently used in the food industry.
PMMA Polymethylmethacrylate	Clear, transparent, hard, scratch-resistant, UV-resistant, mainly for optical applications.
POM Polyoxymethylene	High impact resistance, good mechanical strength. Good chemical resistance.
PP Polypropylene	Very good electrical properties. Impact resistant, tough, mechanically resilient. Very low water uptake. Good to very good chemical resistance.
PPE Polyphenylene ether	Tough, inflexible, high mechanical strength over a wide temperature range. Good chemical resistance. Good hot water resistance.
PSU Polysulfone	High temperature resistance, high impact resistance, good chemical resistance, FDA approved (food grade).
PTFE Polytetrafluoroethylene	Best temperature and chemical resistance, FDA approved (food grade).
PUR Polyurethane	Elastic, abrasion-resistant, impact-resistant. Good resistance to oils, greases, solvents (used for gaskets and cable jackets).
PVC Polyvinyl chloride	Good mechanical strength and chemical resistance (cable).
PVDF Polyvinylidene fluoride	Thermoplastic. High mechanical strength and temperature resistance. Good chemical resistance (similar to PTFE).

Material	Use and characteristics
METAL	
Al Wrought aluminum alloy	Standard-aluminum for machined cutting. Can be anodized. Material for housings and mounting components.
CuZn Brass	Standard-housing material with surface protection.
Stainless steel	Excellent corrosion resistance and strength. Quality 1.4034, 1.4104: Standard-material; quality 1.4305, 1.4301: Standard-material for the food industry; quality 1.4401, 1.4404, 1.4571: With increased requirements on chemical resistance at elevated temperatures for the food industry.
GD-Al die-cast-aluminum	Low specific gravity. Good strength and resistance. Some types can be anodized.
GD-Zn die-cast-zinc	Good resistance and strength. Usually with protective surface coating.
OTHER	
Glass	Good chemical resistance and strength. Used primarily in optical applications (lenses, cover lenses).
Ceramic	Very good strength and chemical resistance. Electrically insulating. Excellent temperature resistance.

Robust splitters for rapid, reliable connections

Y-SPLITTERS

With our Y-splitters, you can collect, connect and split two signals in the field. Our comprehensive program offers robust and industrial-grade Y-splitters with various designs.
All splitters ensure a rapid and reliable connection.

The most important benefits

- Connecting different lines
- Comprehensive product range
- Various designs
- Reliable and rapid connection
- High dust and water protection
- Robust and industrial grade

Splitters without wires ensure secure connection

TEES

For reliable gathering, connecting and distributing two signals Balluff provides a wide range of tees. Our solutions are distinguished by their small, narrow and compact design and are available in different form factors.

Our wide product offering includes tees with M8, M12 and 7/8“ connection, which are appropriate for 3-, 4- and 5-wire cables. Different protective circuits and variants without, with one or with two mounting holes offer you great flexibility.

The most important benefits

- Small, narrow and compact
- Extensive product range with various designs
- For reliable, fast connecting
- Robust and industrial grade
- Resistant to shocks and vibration
- Protection type IP67, optional IP68
- High-quality materials
- Bright LEDs
- Flexibly applicable – various wirings, variants without, with one or with two mounting holes

The right connector for every industry

FIELD ATTACHABLES

Balluff offers you an extensive product range of field attachables for the secure transmission of signals, data and power. From various designs and housing materials, you can select exactly the product that fits your application.
All plug connectors are extremely robust and industrial grade.

The most important benefits

- Large selection for every industry
- Various designs
- Various housing materials
- Secure transmission of signals, data and power
- Robust and industrial grade

Rugged for optimized connecting

BULKHEADS

We offer you an extensive product range of bulkheads. Our plug connectors RJ45 and M12 (A-, B- and D-coded) in various designs are exceptionally robust, resistant to shock and vibration.

High dust and water protection and high-quality materials distinguish connectors from Balluff. They ensure a reliable and rapid connection through the control cabinet wall or other housings.

The most important benefits

- High dust and water protection
- Extensive product range with various designs
- For reliable, fast connecting
- Robust and industrial grade
- High-quality materials

Rugged for secure connections

RECEPTACLES

With Balluff you can select from a wide, flexibly applicable product range of receptacles in M8 and M12 sizes. You can get the connectors in 3-, 4-, 5-, 8- and 12-pin versions. All connectors are made of rugged metal, comply with IP67 and are resistant to shock and vibration.

The most important benefits

- With socket and plug
- Robust metal designs
- Resistant to shocks and vibration
- High-quality materials
- Protection class IP67
- Different strand lengths available
- Wide range of products
- Flexible in application

Problem solvers in installation technology

ADAPTERS

The extensive range of adapters from Balluff helps you to connect different plug connector designs quickly and reliably.
We offer many solutions, all of which are rugged and industrial grade for the highest possible level of flexibility.

The most important benefits

- Robust, industrial grade
- For reliable, fast connecting
- Additional flexibility

Matched to your bus system

TERMINATING RESISTORS

At Balluff you will always find the right terminating resistor. This is because we offer terminating resistors for all standard commercial bus systems: Profibus, Devicenet and CC-Link. Our broad product range includes both standard and custom components.

Available in various form factors and in molded versions.
All products are best suited for rugged use in the industrial environment. Rugged, noise-resistant and extremely reliable, they contribute to the high production quality of your systems.

The most important benefits

- Robust, immune to faults
- Resistant to shocks and vibration
- Industrial grade
- IP67, optionally IP68
- High-quality materials
- Reliable
- Various designs
- Suitable for all standard commercially available field bus systems
- Supports high manufacturing quality

**Universal use,
even under harsh conditions**

JUNCTION BLOCKS

Junction blocks from Balluff connect sensors and actuators to the controller. They are especially suited for all applications where coolants and lubricants are used and also are ideal for harsh conditions. The fully encapsulated housing offers a high degree of media resistance and an outstanding resistance to shock and vibrations.

The most important benefits

- Easy connections
- Low space requirements
- High media resistance and precision fit with metal screw inserts
- Flexible mounting options

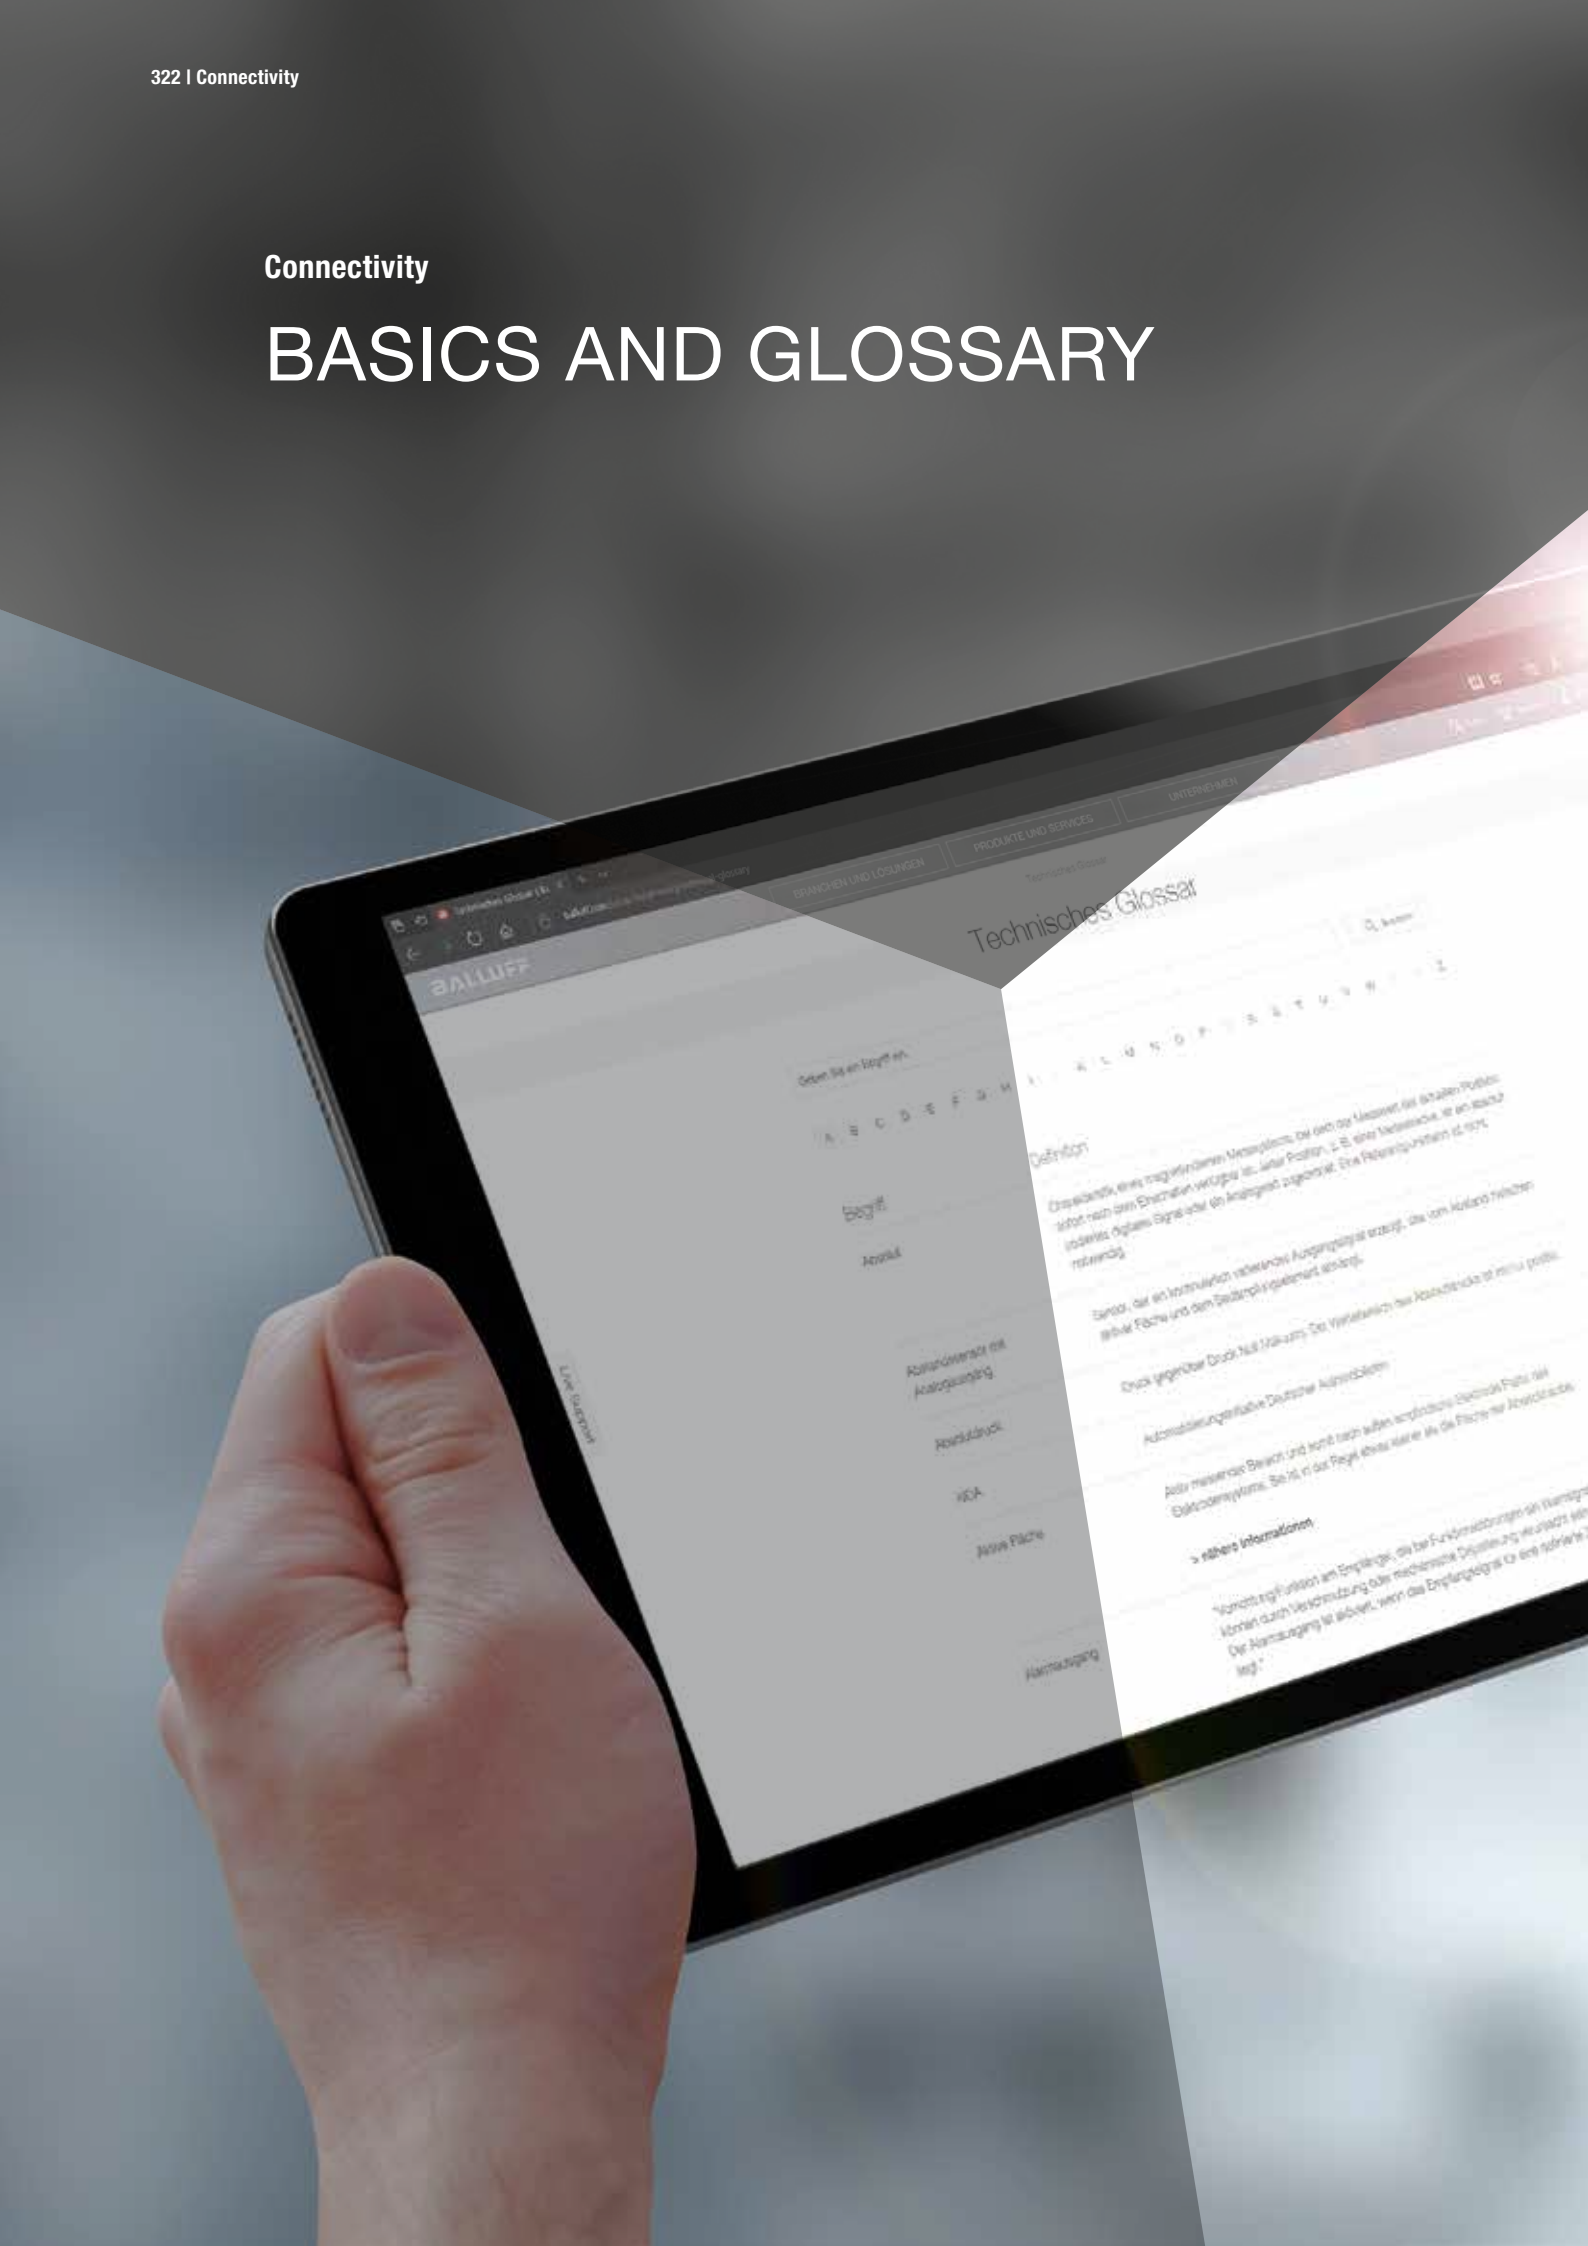
Connectivity

BASICS AND GLOSSARY



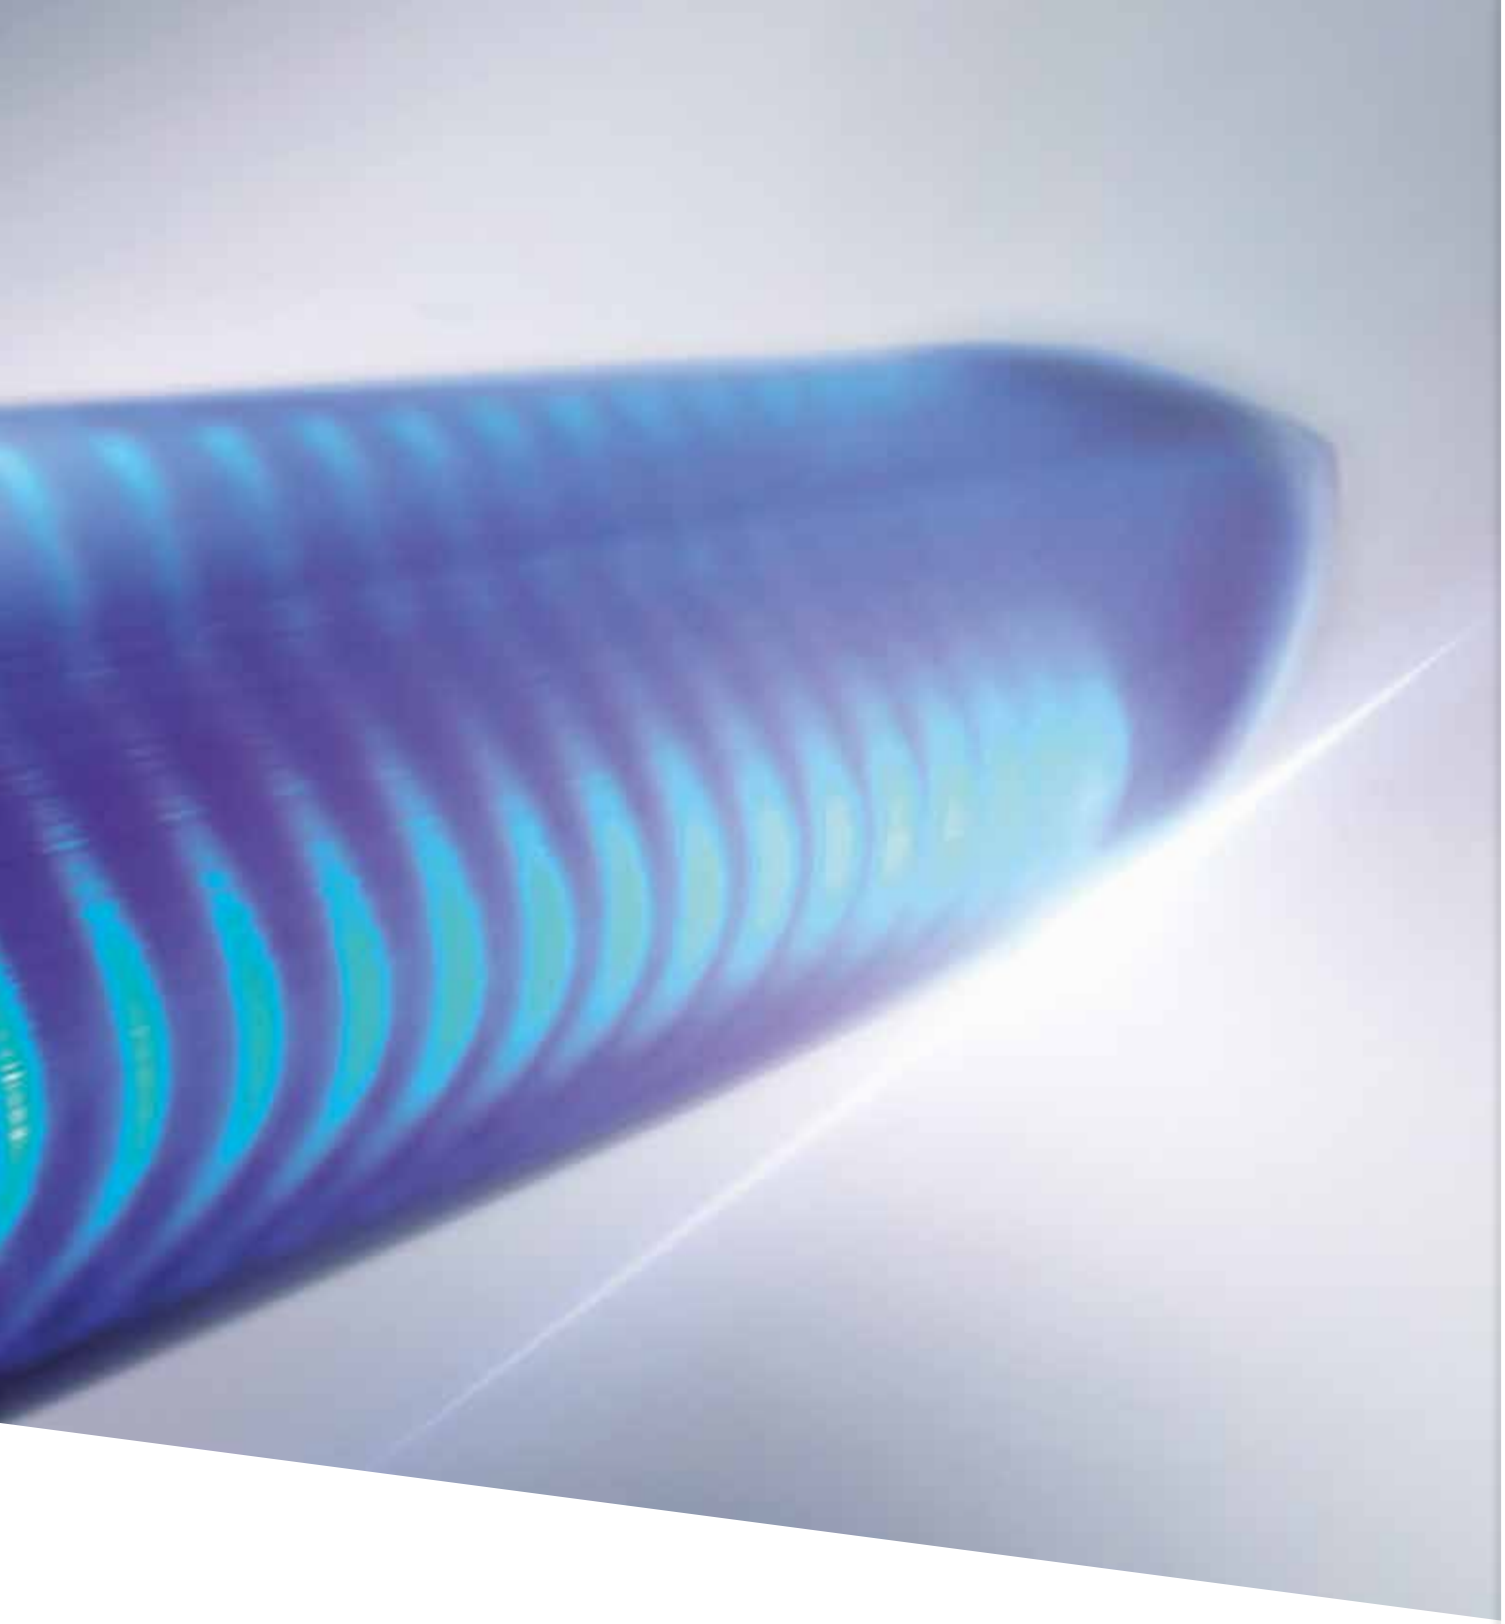
Connection	Indication of the form factor, coding and plug type
Wire fastening	How the connection of the leads in the plug is accomplished
Rated voltage	The maximum value of the electrical voltage in normal operation
Rated current	The electrical amperage which is assigned to an electrical device for a specified operating condition
Power-on indicator	Function indicator
Piercing technology	Piercing technology is a contact method where piercing connectors penetrate the insulation, move between the wires of the cable, and thus establish a secure contact with the cable
HDC cables	Cables for special applications, e.g. welding areas
Cable break	Interruption of the cable between the device and the controller due to mechanical damage
Cross-section	Cross-section of the cable, e.g. copper in mm^2 or AWG (American Wire Gauge)
Solder connections	Connection technique in which the conductor and connector are soldered together
Insulation displacement connection technology	Connection technique in which the conductor and connector are connected by means of a displacement contact through the wire insulation
Screw terminals	Connection technique in which the conductor and connector are connector by means of a clamp

Human Machine Interfaces

All the information you need at a glance

HUMAN MACHINE INTERFACES

innovating automation



With our signaling and display devices, you know at all times what/where things stand with production and exactly where a tool is located.
You can reliably monitor the state of machines and systems and display the sensor output signals.

Your Balluff solutions

- Signaling and display devices
- Monitors
- Displays

Capture operating status with displays and SmartLight

SIGNALING AND DISPLAY DEVICES

Our displays and the SmartLight LED stack light display physical variables. They allow you to know the operating status of your machine at a glance. The displays give you the choice between analog, SSI and pulse inputs. The SmartLight visualizes progressions and trends, with the special advantage that you can correlate different colors and modes without any mechanical modifications. Through the IO-Link interface, it is easy to install and configure.

The most important benefits

- Flexible
- Easy to install
- Displays for analog, SSI or pulse input signal
- SmartLight with IO-Link and individually correlated colors and modes

INDUSTRIAL NETWORKING

Extraordinary parameter settings and diagnostics capabilities

NETWORK BLOCKS

Balluff has developed a new generation of network modules for perfect linking of sensors and actuators. The system features highly versatile parameter settings and diagnostics possibilities that can be carried out via display, LEDs and an integrated Web server.

The status LEDs on the modules are large, bright and easy to read and interpret. This saves you time in setup, maintenance or troubleshooting. With an output current of up to 2 A, the Balluff network modules are capable of driving almost any load. Each output also offers overload protection with LED indicator and a memory feature for easy troubleshooting. The rugged, full-jacket enclosure also withstands high mechanical loads.

Features

- High performance in all networks
- Faster, simpler connection
- Reliable even in harsh environments, shock and vibration resistant
- IP67 design and rugged full-jacket enclosure
- Integrated Web server
- Line topology construction

System solutions for efficient network design

SWITCHES

Ethernet-based network systems are increasingly gaining significance in industrial automation. To enable you to easily link all Ethernet system components with Ethernet, Balluff provides you with a complete system. We offer you a multiplicity of Ethernet-based systems and network components for machine and system outfitting, including Profinet and Ethernet/IP. This means optimum infrastructure for complex networks.

Features

- Variety of Ethernet-based systems and network components
- Complete system for linking Ethernet system components with Ethernet

**Reliable signal transmission,
even under extreme conditions**

I/O MODULES

I/O modules from Balluff connect binary and analog sensors and actuators to the control level via a bus. By using our modules you can significantly reduce the number of cables required. The Balluff I/O modules also offer additional functions for signal preprocessing and expanded diagnostic options. Various form factors and connection technologies provide solutions for a wide range of requirements – even under extreme ambient conditions.

Features

- Simple to install
- Efficient configuration
- Continuous diagnostics
- Individual solutions through a variety of designs and connection techniques
- Suitable for use under extreme conditions

Efficient communication without wear

INDUCTIVE COUPLERS

Fixed wiring of sensors and actuators comes with drawbacks: cable and contacts are often severely loaded in automation, and cables can fatigue and break. In the worst case scenario this can result in a machine failure. Our BIC inductive couplers transmit data and power contactlessly across an air gap. Thus, no mechanical wear is produced. The system availability is higher, the cycle times are shorter and the sequences are more flexible. The units can quickly be disconnected, are easy to handle and are maintenance-free. This enables you to meet new demands quickly.

Features

- No mechanical wear
- Higher system availability, shorter cycle times, more flexible sequences
- Quickly disconnectable, easy to handle, maintenance free

Software

**Generate, transport, visualize data –
Create added value**

SOFTWARE AND SYSTEMS SOLUTIONS.

innovating automation

The future of automation is increasingly connected and digital. The growing diversity of technology – including in the private sector – expectations of many users while the demands on industry rise.

Meeting these increasing demands necessitates the merging of traditional automation technology (OT) and information technology (IT). And the increased use of software is the next logical step.

Balluff offers IIoT capable hardware and middleware in combination with powerful software. This means you benefit from system solutions for the widest variety of requirements in your production environment.

Your Balluff solutions

- Configuring Balluff IO-Link devices with the **Balluff Engineering Tool** 216
- Injection molding tool management with **Mold-ID** 218
- Tool parameter transfer with **Easy Tool-ID** 220

Parameterizing, configuring and starting up IO-Link devices – now even easier

BALLUFF ENGINEERING TOOL

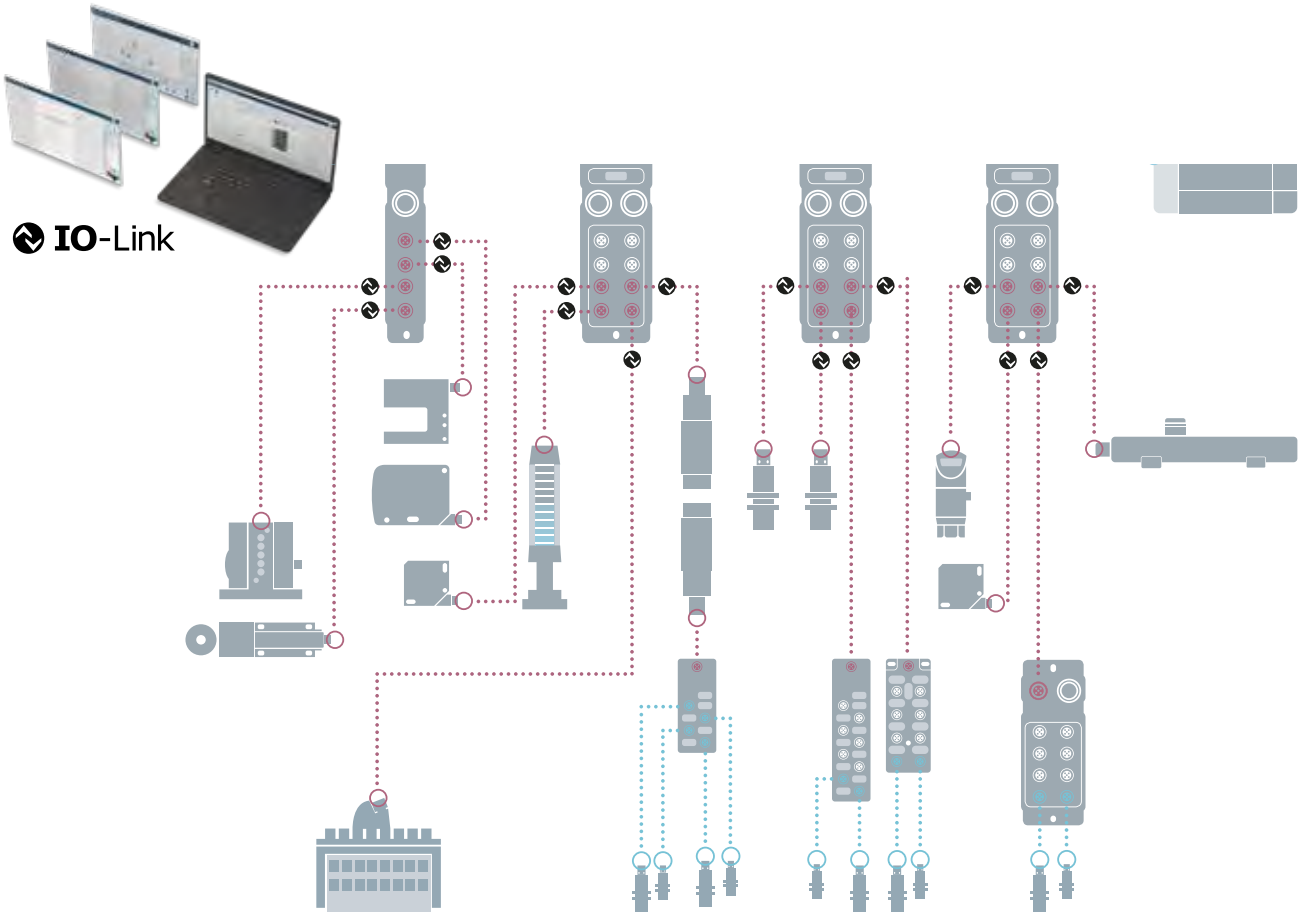
When you need a manufacturer-neutral startup and configuration of IO-Link devices, the Balluff Engineering Tool (BET) is the answer.

This software quickly and easily provides you with an overview of your topologies and allows you to track the status of all the connected IO-Link devices. You can also parameterize and place the devices in service while also managing the parameters for individual devices or entire topologies. Functions for documenting the topologies and for testing inputs and outputs are also available within the software along with simple assignment of IP addresses.

The BET is part of the Smart Automation and Monitoring System (SAMS) from Balluff, which includes a variety of devices with a standard operating, configuration and diagnostics concept.

Features

- Simple, faster setup of IO-Link devices – even without a PLC
- Reduced startup time and fewer errors since IO-Link device settings can be saved and reused
- Prevents wiring mistakes and reduces time-consuming troubleshooting by testing the IO-Link wiring before startup
- Overview of the entire IO-Link topology and its status
- Part of the Smart Automation and Monitoring System (SAMS) from Balluff



BALLUFF ENGINEERING TOOL (BET)

Standard version	BAI BET-S12N-UDN-0001-_DW-ST_ _
Description	You get the full functional capability of our Balluff Engineering Tool (BET) in the form of a 12-month license. You can configure the scope of the license yourself. One license is needed for each terminal device fully covered by the BET. The software can be used with some function limitations without purchasing a license.

Ordering example: BAI BET-S12N-UDN-0001-__DW-ST__

Payment type
- 2 Software subscription, monthly payments
- 3 Software subscription, annual payment

Number of network blocks
- OB 2 active distributors
- OB 5 active distributors
- OB 10 active distributors
- OB 20 active distributors

No license is required for using just one network module.

The BET is suitable for all Profinet and Ethernet/IP IO-Link network blocks firmware version 3.2.2 and higher.
